

Contents

1. Introduction	1
1.1. Structure of this thesis	7
2. Distortion and unbalance in power networks	9
2.1. Power distribution	11
2.2. Power electronics	16
2.2.1. 19th century to the 1940s	17
2.2.2. 1940s until today	17
2.3. Machinery	24
2.4. Summary	26
3. Fourier series and transform	31
3.1. Exponential Fourier series	31
3.2. Trigonometric Fourier series	32
3.3. Continuous-time Fourier transform	34
3.4. Discrete-time Fourier transform	35
3.5. Discrete Fourier transform and fast Fourier transform	37
3.5.1. Power and energy spectra	38
3.6. Sources for errors	40
3.6.1. Sampling theorem, aliasing	40
3.6.2. Picket fence effect	42
3.6.3. Leakage effect	42
3.7. Non-stationary signals	43
3.7.1. Atomic decomposition or Short-Time Fourier Transform	45
3.8. Summary	46
4. Modelling	51
4.1. Time-domain modelling	51
4.2. Frequency-domain modelling using frequency coupling matrices	53
4.3. Frequency coupling matrices for resistors, inductors and capacitors	58
4.4. Interconnecting subsystems	59
4.5. Summary	61

5. Voltage source converter	63
5.1. Modelling voltage source converters	65
5.2. Base case switching function	68
5.2.1. Transfers T_{13} and T_{23} from dc to ac side voltage	74
5.2.2. Transfers T_{31} and T_{32} from ac to dc side current	76
5.2.3. Base case frequency coupling matrix M_0	78
5.2.4. DC voltage and ac current distortions	80
5.3. Non-sinusoidal control signal	82
5.3.1. Transfers T_{14} to T_{26} from control signal variation to ac side voltages	85
5.3.2. Transfers T_{34} to T_{36} from control signal variation to dc side current	86
5.3.3. Small-signal frequency coupling matrix T_{VSC}	88
5.4. Space vector modulation	90
5.4.1. Carrier-based PWM generation versus space vector modulation	94
5.5. Blanking time	95
5.6. Grid connected PWM converter	97
5.6.1. Characteristic harmonics	100
5.6.2. Non-characteristic harmonics	101
5.6.2.1. AC voltage and dc current distortions	101
5.6.2.2. AC system impedance unbalance	103
5.6.2.3. Large signal analysis	105
5.6.2.4. Equivalent small-signal sources	105
5.6.3. AC system impedance unbalance - conclusions	106
5.7. Summary	107
6. Voltage source converter control	109
6.1. Current control loop	112
6.1.1. Control design	114
6.2. DC voltage control	116
6.2.1. Control design	117
6.3. Reactive power control	118
6.4. Small-signal frequency-domain modelling	119
6.5. Results	122
6.6. Summary	123
7. Induction machine	125
7.1. Angular frequencies in induction machines	127
7.2. Voltage equations	128
7.3. Flux linkages	128
7.4. Transformation into one rotating reference frame	130
7.5. State-space model of an induction machine	132
7.6. Small-signal linearisation	134
7.7. Small-signal frequency-domain model of the doubly-fed induction machine	136
7.8. Model verification	139

7.9. Summary	145
8. Active reduction of distortion levels	147
8.1. Voltage source converter	148
8.2. Doubly-fed induction machine	153
8.3. Summary	157
9. Conclusion and outlook	159
A. Power system terminology	163
A.1. Root-mean square value	163
A.2. Power quality definitions	164
A.2.1. Harmonics, interharmonics and subharmonics	164
A.2.2. Voltage sags or dips and swells	165
A.2.3. Flicker	165
A.2.4. Total harmonic distortion	166
A.3. Power definitions, sinusoidal conditions	167
A.3.1. Instantaneous power	167
A.3.2. Active power	168
A.3.3. Reactive power	169
A.3.4. Apparent power	169
A.4. Power definitions, non-sinusoidal conditions	172
A.4.1. Active power	172
A.4.2. Reactive power	173
A.4.3. Apparent power	173
A.4.4. Distortion power	174
A.4.5. Power factor	175
A.5. Sinusoidal voltage, non-sinusoidal currents	176
A.6. Three-phase power calculations, summary	177
B. Frameworks	181
B.1. abc , “standard” framework	181
B.2. $\alpha\beta 0$, stationary framework	183
B.3. $dq 0$, rotating framework	184
B.4. $pn 0$, sequence components	186
C. Voltage source converter transfers	191
C.1. Transfers T_{13}, T_{23}	191
C.2. Transfers T_{31}, T_{32}	192
C.3. Transfers $T_{14} - T_{26}$	193
C.4. Transfers $T_{34} - T_{36}$	195
C.5. Overall frequency coupling matrix T_{VSC}	198
D. Trigonometric identities	199

E. Supervised theses	201
F. Publications	203
Bibliography	205
