

System.Reflection.TargetParameterCountException Class

```
[ILAsm]
.class public sealed serializable TargetParameterCountException extends
System.ApplicationException

[C#]
public sealed class TargetParameterCountException: ApplicationException
```

Assembly Info:

- *Name:* mscorlib
- *Public Key:* [00 00 00 00 00 00 00 00 04 00 00 00 00 00 00 00]
- *Version:* 2.0.x.x
- *Attributes:*
 - CLSCompliantAttribute(true)

Summary

Represents the error that occurs when the number of parameters passed in the invocation of a member does not match the number of parameters required by the contract of that member.

Inherits From: System.ApplicationException

Library: Reflection

Thread Safety: All public static members of this type are safe for multithreaded operations. No instance members are guaranteed to be thread safe.

Description

This exception is thrown by types in the Reflection Library, when attempting to dynamically invoke members.

TargetParameterCountException()

Constructor

```
[ILAsm]  
public rtspecialname specialname instance void .ctor()  
  
[C#]  
public TargetParameterCountException()
```

Summary

Constructs and initializes a new instance of the `System.Reflection.TargetParameterCountException` class.

Description

This constructor initializes the `System.Reflection.TargetParameterCountException.Message` property of the new instance to a system-supplied message that describes the error, such as "Parameter count mismatch." This message takes into account the current system culture.

The `System.Reflection.TargetParameterCountException.InnerException` property of the new instance is initialized to `null`.

TargetParameterCountException(System.String) Constructor

```
[ILAsm]
public rtspecialname specialname instance void .ctor(string message)

[C#]
public TargetParameterCountException(string message)
```

Summary

Constructs and initializes a new instance of the `System.Reflection.TargetParameterCountException` class.

Parameters

Parameter	Description
<i>message</i>	A <code>System.String</code> that describes the error. The content of <i>message</i> is intended to be understood by humans. The caller of this constructor is required to ensure that this string has been localized for the current system culture.

Description

This constructor initializes the `System.Reflection.TargetParameterCountException.Message` property of the new instance using *message*. If *message* is null, the `System.Reflection.TargetParameterCountException.Message` property is initialized to the system-supplied message provided by the constructor that takes no arguments.

The `System.Reflection.TargetParameterCountException.InnerException` property is initialized to null.

TargetParameterCountException(System.String, System.Exception) Constructor

```
[ILAsm]
public rtspecialname specialname instance void .ctor(string message, class
System.Exception inner)

[C#]
public TargetParameterCountException(string message, Exception inner)
```

Summary

Constructs and initializes a new instance of the `System.Reflection.TargetParameterCountException` class.

Parameters

Parameter	Description
<i>message</i>	A <code>System.String</code> that describes the error. The content of <i>message</i> is intended to be understood by humans. The caller of this constructor is required to ensure that this string has been localized for the current system culture.
<i>inner</i>	An instance of <code>System.Exception</code> that is the cause of the current <code>Exception</code> . If <i>innerException</i> is non-null, then the current <code>Exception</code> was raised in a catch block handling <i>innerException</i> .

Description

This constructor initializes the `System.Reflection.TargetParameterCountException.Message` property of the new instance using *message*, and the `System.Reflection.TargetParameterCountException.InnerException` property using *inner*. If *message* is null, the `System.Reflection.TargetParameterCountException.Message` property is initialized to the system-supplied message provided by the constructor that takes no arguments.

[*Note:* For information on inner exceptions, see `System.Exception.InnerException`.]
