CONTENTS

FOREWORD.....	5
INTRODUCTION.....	7
1 Scope.....	8
2 Normative references.....	8
3 Terms and definitions	9
4 General	14
5 EMC test plan	15
5.1 Objective.....	15
5.2 Configuration of equipment under test (EUT)	15
5.2.1 General	15
5.2.2 Assembly of EUT	15
5.2.3 EUT interconnecting cables.....	15
5.2.4 Auxiliary equipment.....	15
5.2.5 Cabling and grounding	16
5.3 Test pre-conditioning.....	16
5.3.1 Operational conditions	16
5.3.2 Environmental conditions	16
5.3.3 Test software.....	16
5.4 Acceptance criteria.....	16
5.5 Scope of EMC testing.....	17
6 Emission requirements.....	17
6.1 Conditions during the emission tests	17
6.2 Emission limits	19
6.2.1 General	19
6.2.2 Emission limits for equipment installed in the deck and bridge zone.....	21
6.2.3 Emission limits for equipment installed in the general power distribution zone	21
6.2.4 Emission limits for equipment installed in the special power distribution zone	22
7 Immunity requirements.....	22
7.1 Conditions during the immunity tests	22
7.2 Minimum immunity requirements	22
7.3 System aspects.....	24
8 Test results and test report	24
Annex A (informative) IMO Resolution A.813 (19):1995	25
Annex A (informative) General EMC planning procedures	25
A.1 Introduction Overview	25
A.2 General procedures.....	25
A.3 EMC management.....	25
A.3.1 General	25
A.3.2 EMC advisory group.....	25
A.3.3 EMC management tasks	26
A.3.4 Rough analysis	26
A.3.5 EMC requirements for equipment	27
A.3.6 EMC interface agreements.....	27
A.3.7 Installation recommendations.....	27

A.3.8	Assessment of conformity with EMC regulations	27
A.3.9	Additional measures	28
A.4	Full EMC analysis.....	28
A.4.1	General	28
A.4.2	Electromagnetic interference matrix (EMI matrix)	28
A.4.3	Collection of data	28
A.4.4	Data processing.....	29
A.4.5	Completing the matrix	33
A.4.6	Calculations	34
A.4.7	Conclusions to be drawn from the matrix	34
A.5	Additional EMC measures	34
A.5.1	General	34
A.5.2	Limitation of electromagnetic emission	34
A.5.3	Limitation of electromagnetic influences	35
A.6	EMC testing	35
A.6.1	Equipment testing	35
A.6.2	System testing	35
Annex B (informative)	Measures to achieve EMC Mitigation guidelines	36
B.1	Applicability	36
B.2	General technical measures	36
B.2.1	General	36
B.2.2	Equipment and installation groups	37
B.2.3	Screening Shielding	38
B.2.4	Grounding.....	38
B.2.5	Cable routing	39
B.2.6	Filtering and overvoltage protection.....	41
B.3	Special measures for equipment groups A to G	43
B.3.1	General	43
B.3.2	Measures for group A.....	43
B.3.3	Measures for group B.....	44
B.3.4	Measures for group C	45
B.3.5	Measures for group D	46
B.3.6	Measures for group E.....	46
B.3.7	Measures for group F.....	48
B.3.8	Measures for group G	49
B.4	Organizational measures.....	50
B.4.1	On-board operation	50
B.4.2	Maintenance and repair.....	50
B.5	Reference documents	
Annex C (informative)	EMC test report	51
Bibliography	52
Figure 1	– Examples for ports	14
Figure 2	– Schematic diagram of zones (example).....	22

INTERNATIONAL ELECTROTECHNICAL COMMISSION

**ELECTRICAL AND ELECTRONIC INSTALLATIONS IN SHIPS –
ELECTROMAGNETIC COMPATIBILITY (EMC) –
SHIPS WITH A METALLIC HULL****FOREWORD**

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as “IEC Publication(s)”). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

DISCLAIMER

This Redline version is not an official IEC Standard and is intended only to provide the user with an indication of what changes have been made to the previous version. Only the current version of the standard is to be considered the official document.

This Redline version provides you with a quick and easy way to compare all the changes between this standard and its previous edition. A vertical bar appears in the margin wherever a change has been made. Additions and deletions are displayed in red, with deletions being struck through.

International Standard IEC 60533 has been prepared by IEC technical committee 18: Electrical installations of ships and of mobile and fixed offshore units.

This third edition cancels and replaces the second edition, published in 1999. This edition constitutes a technical revision.

This edition includes the following significant technical changes with respect to the previous edition:

- Introduction has been supplemented;
- scope and title have been modified to limit the application of the standard to installations in ships with metallic hulls only;
- the normative references have been updated;
- further explanation for *in-situ* testing has been given in 5.1;
- numbering of CISPR-Standards in Tables 1, 2 and 3 has been updated;
- title of Annex B has been changed;
- requirements on cable routing in Annex B have been amended;
- new Annex C EMC test report has been added.

The text of this standard is based on the following documents:

FDIS	Report on voting
18/1460/FDIS	18/1471/RVD

Full information on the voting for the approval of this standard can be found in the report on voting indicated in the above table.

This publication has been drafted in accordance with the ISO/IEC Directives, Part 2.

The committee has decided that the contents of this publication will remain unchanged until the stability date indicated on the IEC web site under "<http://webstore.iec.ch>" in the data related to the specific publication. At this date, the publication will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

A bilingual version of this standard may be issued at a later date.

IMPORTANT – The “colour inside” logo on the cover page of this publication indicates that it contains colours which are considered to be useful for the correct understanding of its contents. Users should therefore print this publication using a colour printer.

INTRODUCTION

Electrical installations of ships with electric and/or electronic systems need to operate under a wide range of environmental conditions.

The control of undesired electromagnetic emission ensures that no other device on board will be unduly influenced by the equipment under consideration. Suitable limits are specified.

On the other hand, the equipment needs to function without degradation in the normal electromagnetic environment. The limit values for immunity, specified in this International Standard, have been chosen under this assumption. Equipment which is tested and installed in accordance with this International Standard meets the relevant IMO requirements. Special risks, for instance lightning strikes, transients from the operation of circuit breakers and electromagnetic radiation from radio transmitters are also covered.

Complex electric and/or electronic systems require EMC planning in all phases of design and installation, considering the electromagnetic environment, any special requirements and the equipment performance.

This third edition of IEC 60533 is applicable to electromagnetic compatibility of all electrical and electronic installations in ships **with metallic hull**.

It is based on the assumption that the ship is constructed in such a way that metallic hull and structure parts will significantly attenuate electromagnetic disturbance from the outer deck environment to the inner deck environment and vice versa.

ELECTRICAL AND ELECTRONIC INSTALLATIONS IN SHIPS – ELECTROMAGNETIC COMPATIBILITY (EMC) – SHIPS WITH A METALLIC HULL

1 Scope

This International Standard specifies minimum requirements for emission, immunity and performance criteria regarding electromagnetic compatibility (EMC) of electrical and electronic equipment for ships with metallic hull. ~~It assists in meeting the requirements of IMO resolution A.813 (see annex A).~~ Additional or divergent requirements for ships with non-metallic hull will be given in a future International Standard (IEC 62742).

~~Equipment which is tested and installed in accordance with this standard meets the relevant IMO requirements.~~

This International Standard assists in meeting the relevant EMC requirements as stated in SOLAS 74, Chapter IV, Regulation 6 and Chapter V, Regulation 17. Reference to this International Standard is made in IMO Resolution A.813(19).

~~NOTE 1~~ The normative part of this International Standard has been prepared as a product family EMC standard.

~~NOTE 2~~ Effects on human beings are not the subject of this standard.

This International Standard further gives guidelines and recommendations on the measures to achieve EMC in the electrical and electronic installations of the following equipment groups:

- a) group A: maritime navigation and radio communication ~~and navigation~~ equipment and systems;
- b) group B: power generation and conversion equipment;
- c) group C: equipment operating with pulsed power;
- d) group D: switchgear and ~~control systems~~ controlgear;
- e) group E: intercommunication and signal processing equipment and control systems;
- f) group F: non-electrical items and equipment;
- g) group G: integrated systems.

The basic EMC standard for groups A and C is IEC 60945. The EMC requirements according to IEC 60945 apply additionally for

- bridge mounted equipment;
- equipment in close proximity to receiving antennas;
- equipment capable of interfering with the safe navigation of the ship and with radio communication.

~~NOTE~~ This standard does not specify unsafe operation. Effects on humans, like exposure to electromagnetic fields, and basic safety requirements such as protection against electric shock and dielectric strength tests for equipment are not within the scope of this International Standard.
