**Automatic electrical controls -  
Part 2-13: Particular requirements for humidity sensing controls**

## CONTENTS

<b>FOREWORD .....</b>	<b>9</b>
<b>1 Scope .....</b>	<b>12</b>
<b>2 Normative references .....</b>	<b>13</b>
<b>3 Terms and definitions .....</b>	<b>17</b>
3.1 Definitions relating to ratings, voltages, currents, frequencies, and wattages .....	17
3.2 Definitions of types of control according to purpose .....	19
3.3 Definitions relating to the function of controls.....	22
3.4 Definitions relating to disconnection and interruption .....	25
3.5 Definitions of types of control according to construction .....	26
3.6 Definitions of type of automatic action of a control .....	28
3.7 Definitions relating to protection against electric shock and type of insulation .....	28
3.8 Definitions relating to component parts of controls .....	32
3.9 Definitions of types of terminals and terminations of controls .....	33
3.10 Definitions relating to the connections to controls .....	35
3.11 Definitions relating to the performance of type 2 actions .....	36
3.12 Definitions relating to the requirements for creepage distances and clearances .....	36
3.13 Miscellaneous definitions .....	37
3.14 Definitions relating to manufacturer and user .....	39
3.15 Definitions pertaining to thermistors .....	39
3.16 Definitions relating to the structure of controls using software.....	39
3.17 Definitions relating to error avoidance in controls using software .....	39
3.18 Definitions relating to fault/error control techniques for controls using software.....	39
3.19 Definitions relating to memory tests for controls using software .....	39
3.20 Definitions of software terminology – General .....	39
3.21 Definitions relating to classes of control functions .....	40
3.22 Definitions relating to functional safety.....	40
3.23 Definitions related to access to data exchange .....	40
3.24 Definitions related to EMC performance .....	40
<b>4 General .....</b>	<b>42</b>
4.1 General structure of the document .....	42
4.2 General requirements .....	43
4.3 General notes on tests .....	43
<b>5 Required technical information .....</b>	<b>47</b>
5.1 General requirements .....	47
5.2 Methods of providing technical information .....	47
5.3 Class II symbol .....	55
5.4 Additional requirements for marking.....	55
5.5 Warning or cautionary markings .....	57
<b>6 Protection against electric shock .....</b>	<b>57</b>
6.1 General requirements .....	57
6.2 Actuating members and actuating means.....	59
6.3 Capacitors .....	60
6.4 Covers and uninsulated live or hazardous parts .....	60
6.5 Battery operated controls provided with a user accessible mains supply input connector.....	60

7	Provision for protective earthing .....	61
7.1	Class 0I and Class I controls.....	61
7.2	Class II and class III controls .....	61
7.3	Adequacy of earth connections .....	61
7.4	Corrosion resistance .....	62
7.5	Other requirements .....	63
7.6	Protective equipotential bonding .....	63
8	Terminals and terminations.....	63
8.1	Terminals and terminations for external copper conductors.....	63
8.2	Terminals and terminations for internal conductors .....	68
8.3	Terminals and terminations for integrated conductors .....	70
9	Constructional requirements .....	70
9.1	Materials.....	70
9.2	Protection against electric shock.....	70
9.3	Actuation and operation .....	73
9.4	Actions .....	76
9.5	Openings in enclosures.....	78
9.6	Mounting of controls .....	78
9.7	Attachment of cords .....	80
9.8	Size of cords – non-detachable .....	81
9.9	Inlet openings .....	81
9.10	Equipment inlets and socket-outlets.....	82
9.11	Requirements during mounting, use, maintenance and servicing .....	83
9.12	Controls using software .....	85
9.13	Protective controls and components of protective control systems .....	88
10	Threaded parts and connections .....	90
10.1	Threaded parts moved during mounting or servicing .....	90
10.2	Current-carrying connections and connections providing protective earthing continuity .....	92
11	Creepage distances, clearances and distances through solid insulation.....	93
11.1	General.....	93
11.2	Clearances .....	94
11.3	Creepage distances .....	98
11.4	Solid insulation .....	102
12	Components .....	103
12.1	Transformers .....	103
12.2	Switch mode power supplies and converters .....	103
12.3	Capacitors .....	104
12.4	Fuses .....	104
12.5	Varistors .....	104
12.6	Thermistors.....	104
12.7	Relays .....	105
12.8	Other components .....	105
13	Fault assessment on electronic circuits .....	105
13.1	Fault assessment for inherent safety.....	105
13.2	Fault assessment to ensure functional safety .....	111
14	Moisture and dust resistance .....	111
14.1	Protection against ingress of water and dust.....	111

14.2	Protection against humid conditions .....	112
14.3	Touch current test for in-line cord controls and free-standing controls.....	113
15	Electric strength and insulation resistance .....	114
15.1	Insulation resistance .....	114
15.2	Electric strength.....	114
15.3	Additional tests for in-line cord and free-standing controls .....	116
16	Heating.....	117
17	Manufacturing deviation and drift.....	122
18	Environmental stress .....	122
18.1	Transportation and storage .....	122
18.2	Environmental stress of temperature.....	122
19	Endurance .....	123
19.1	General requirements .....	123
19.2	Electrical conditions for the tests .....	124
19.3	Thermal conditions for the tests .....	130
19.4	Manual and mechanical conditions for the tests .....	130
19.5	Dielectric strength requirements.....	131
19.6	Ageing test .....	131
19.7	Overvoltage test or overload test in all countries using an overload test of automatic action at accelerated rate .....	131
19.8	Test of automatic action at accelerated rate.....	132
19.9	Test of automatic action at slow rate .....	132
19.10	Overvoltage test or overload test in all countries that use the overload test of manual action at accelerated speed.....	133
19.11	Test of manual action at slow speed .....	133
19.12	Test of manual action at high speed which has multiple poles, and where polarity reversal occurs during the action .....	133
19.13	Test of manual action at accelerated speed .....	133
19.14	Evaluation of compliance .....	134
19.15	Test for particular purpose controls.....	134
20	Mechanical strength .....	135
20.1	General requirements .....	135
20.2	Impact resistance.....	135
20.3	Free-standing controls .....	136
20.4	In-line cord controls .....	136
20.5	Pull-cord actuated controls .....	137
20.6	Foot actuated controls .....	137
20.7	Actuating member and actuating means.....	137
20.8	Flexing – test .....	138
20.9	Cord anchorages – test.....	138
21	Resistance to heat, fire and tracking.....	139
21.1	General requirements .....	139
21.2	Integrated, incorporated and in-line cord controls.....	139
21.3	Independently mounted, free-standing controls .....	141
22	Resistance to corrosion .....	141
22.1	Resistance to rusting .....	141
23	Electromagnetic compatibility (EMC) requirements – Emission .....	141
23.1	General requirement .....	141

23.2	High frequency emission.....	142
23.3	Low frequency emission.....	145
24	Normal operation .....	145
25	Electromagnetic compatibility (EMC) requirements – Immunity .....	145
25.1	General.....	145
25.2	EMC test plan and report .....	146
25.3	Immunity requirements.....	148
25.4	Performance criteria .....	151
25.5	Surge immunity test .....	152
25.6	Electrical fast transient immunity test.....	152
25.7	Radio-frequency electromagnetic field immunity .....	153
25.8	Electrostatic discharge.....	153
25.9	Immunity to power-frequency magnetic fields.....	153
25.10	Test of the influence of voltage dips and voltage interruption in the power supply network.....	153
26	Abnormal operation tests .....	154
26.1	Abnormal temperature test.....	154
26.2	Overload tests .....	155
26.3	Battery short-circuit test.....	156
Annex A	(normative) Indelibility of markings .....	173
Annex B	(normative) Measurement of creepage distances and clearances in air.....	175
Annex C	(informative) Nominal voltages of supply systems for different modes of overvoltage control .....	179
Annex D	(normative) Overvoltage categories .....	181
Annex E	(informative) Typical usage of controls and related overvoltage categories .....	182
Annex F	(normative) Pollution degrees .....	183
F.1	Pollution .....	183
F.2	Degrees of pollution in the micro-environment .....	183
Annex G	(normative) Resistance to heat, fire and tracking tests .....	184
G.1	Glow-wire test.....	184
G.2	Proof tracking test.....	184
G.3	Ball pressure test.....	184
Annex H	(normative) Requirements related to functional safety .....	186
H.3	Terms and definitions.....	186
H.5	Information .....	197
H.9	Constructional requirements .....	199
H.13	Fault assessment on electronic circuits .....	215
H.17	Manufacturing deviation and drift .....	219
H.19	Endurance .....	221
H.25	Electromagnetic compatibility (EMC) requirements – Immunity.....	222
Annex I	(normative) Requirements for certain types of DC supplied controls .....	239
I.1	Scope .....	239
Annex J	(normative) Requirements for thermistor elements and controls using thermistors .....	241
J.1	Scope .....	241
Annex K	(normative) Circuit for measuring touch current .....	258
Annex L	(normative) Printed circuit board coating performance test.....	259
Annex M	(normative) Printed circuit board protection .....	261

Annex N (informative) Explanatory notes for surge immunity test .....	264
N.1    Different source impedances.....	264
N.2    Application of the tests.....	264
N.3    Installation classification .....	265
Annex O (informative) Guidance for applying Clause 11 .....	268
Annex P (normative) Requirements for SELV and PELV .....	271
P.1    Overview of the requirements for SELV and PELV .....	271
P.2    Protection against electric shock by SELV system or PELV system.....	271
P.3    Protective measures for SELV system and PELV system .....	272
Annex Q (informative) Regional differences relevant for the member countries of Cenelec .....	274
Q.2    Normative references.....	274
Annex R (informative) National differences relevant in the United States of America.....	278
R.2    Normative references.....	278
Annex S (informative) National differences relevant in Japan.....	279
S.2    Normative references.....	279
Annex T (informative) National differences relevant in Canada .....	280
T.2    Normative references.....	280
Annex AA (normative) Independently mounted and in-line cord controls .....	281
Bibliography.....	282
 Figure 1 – Example of ports .....	40
Figure 2 – Structure of the document with respect to inherent safety and functional safety .....	43

Table J.5 – Additional items to Table 1 .....	247
Table J.6 – Sequence of calibration and conditioning tests for PTC thermistors .....	249
Table J.7 – Classes for PTC sensing thermistors .....	250
Table J.8 – Sequence of calibration and conditioning tests for NTC thermistors.....	251
Table J.9 – Classes for NTC sensing thermistors .....	251
Table J.10 – Number of cycles for endurance test.....	255
Table J.11 – Ageing test temperature .....	255
Table J.12 – Number of cycles for endurance test.....	256
Table L.1 – Environmental cycling conditions.....	259
Table M.1 – IEC 60664-3 test levels or conditions .....	261
Table O.1 – Example A – Using Annex O guidance for applying Clause 11 .....	270
Table O.2 – Example B – Using Annex O guidance for applying Clause 11 .....	270
Table Q.1 – Additional aging parameters for windings.....	275
Table AA.1 – Number of cycles .....	281

## INTERNATIONAL ELECTROTECHNICAL COMMISSION

### Automatic electrical controls - Part 2-13: Particular requirements for humidity sensing controls

#### FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) IEC draws attention to the possibility that the implementation of this document may involve the use of (a) patent(s). IEC takes no position concerning the evidence, validity or applicability of any claimed patent rights in respect thereof. As of the date of publication of this document, IEC had not received notice of (a) patent(s), which may be required to implement this document. However, implementers are cautioned that this may not represent the latest information, which may be obtained from the patent database available at <https://patents.iec.ch>. IEC shall not be held responsible for identifying any or all such patent rights.

This extended version (EXV) of the official IEC Standard provides the user with the full content of the Standard.

IEC 60730-2-13:2025 EXV includes the content of IEC 60730-2-13:2025, and the references made to IEC 60730-1:2022.

The specific content of IEC 60730-2-13:2025 is displayed on a blue background.

IEC 60730-2-13 has been prepared by IEC technical committee 72: Automatic electrical controls. It is an International Standard.

This fourth edition cancels and replaces the third edition published in 2017. This edition constitutes a technical revision.

This edition includes the following significant technical changes with respect to the previous edition:

- a) adoption to IEC 60730-1:2022 with all of its significant changes to IEC 60730-1:2013, IEC 60730-1:2013/AMD1:2015 and IEC 60730-1:2013/AMD2:2020.

The text of this International Standard is based on the following documents:

Draft	Report on voting
72/1487/FDIS	72/1503/RVD

Full information on the voting for its approval can be found in the report on voting indicated in the above table.

The language used for the development of this International Standard is English.

This document was drafted in accordance with ISO/IEC Directives, Part 2, and developed in accordance with ISO/IEC Directives, Part 1 and ISO/IEC Directives, IEC Supplement, available at [www.iec.ch/members\\_experts/refdocs](http://www.iec.ch/members_experts/refdocs). The main document types developed by IEC are described in greater detail at [www.iec.ch/publications](http://www.iec.ch/publications).

A list of all parts of the IEC 60730 series, under the general title: *Automatic electrical controls*, can be found on the IEC website.

This part 2-13 is intended to be used in conjunction with IEC 60730-1. It was established on the basis of the sixth edition of that standard (2022). Consideration may be given to future editions of, or amendments to, IEC 60730-1.

This part 2-13 supplements or modifies the corresponding clauses in IEC 60730-1, so as to convert that publication into the IEC standard: Particular requirements for humidity sensing controls.

Where this part 2-13 states "addition", "modification" or "replacement", the relevant requirement, test specification or explanatory matter in Part 1 should be adapted accordingly.

When a particular subclause of Part 1 is not mentioned in this Part 2, that subclause applies.

In the development of a fully international standard it has been necessary to take into consideration the differing requirements resulting from practical experience in various parts of the world and to recognize the variation in national electrical systems and wiring rules.

The reader's attention is drawn to the fact that Annex Q, Annex R, Annex S and Annex T list all of the "in-some-country" clauses on differing practices of a less permanent nature relating to the subject of this document.

In this publication:

- 1) The following print types are used:
  - requirements proper: in roman type;
  - *test specifications*: in italic type;

- explanatory matter: in smaller roman type.
  - Defined terms: **bold type**.
- 2) Subclauses, notes or items which are additional to those in Part 1 are numbered starting from 101, additional annexes are lettered AA, BB, etc.

The committee has decided that the contents of this document will remain unchanged until the stability date indicated on the IEC website under [webstore.iec.ch](http://webstore.iec.ch) in the data related to the specific document. At this date, the document will be

- reconfirmed,
- withdrawn, or
- revised.

## 1 Scope

This document applies to automatic **electrical humidity sensing controls**

- for use in, on, or in association with equipment for household appliance and similar use;

NOTE 1 Throughout this document, the word "equipment" means "appliance and equipment" and "controls" means "**humidity sensing control**".

- for building automation within the scope of ISO 16484 series and IEC 63044 series (HBES/BACS);
- for equipment that is used by the public, such as equipment intended to be used in shops, offices, hospitals, farms and commercial and industrial applications;

EXAMPLE 1 **Humidity sensing controls** for commercial catering, heating and air-conditioning equipment.

- that are **smart enabled controls**;

EXAMPLE 2 Smart grid control, remote interfaces/control of energy-consuming equipment including computer or smart phone.

- that are AC or DC powered controls with a rated voltage not exceeding 690 V AC or 600 V DC;
- used in, on, or in association with equipment that use electricity, gas, oil, solid fuel, solar thermal energy, etc., or a combination thereof;
- utilized as part of a control system or controls which are mechanically integral with multifunctional controls having non-electrical outputs;
- using NTC or **PTC thermistors** and to discrete **thermistors**, requirements for which are contained in Annex J;
- that are mechanically or electrically operated, responsive to or controlling such characteristics as temperature, pressure, passage of time, humidity, light, electrostatic effects, flow, or liquid level, current, voltage, acceleration, or combinations thereof;
- as well as manual controls when such are electrically and/or mechanically integral with automatic controls.

NOTE 2 Requirements for manually actuated mechanical switches not forming part of an automatic control are contained in IEC 61058-1-1.

This document applies to

- the inherent safety of automatic **electrical humidity sensing controls**, and
- functional safety of automatic **electrical humidity sensing controls** and safety related systems,
- **humidity sensing controls** where the performance (for example the effect of EMC phenomena) of the product can impair the overall safety and performance of the controlled system,
- the operating values, operating times, and operating sequences where such are associated with equipment safety.

This document specifies the requirements for construction, operation and testing of automatic electrical **humidity sensing controls** used in, on, or in association with an equipment.

This document does not

- apply to automatic **electrical humidity sensing controls** intended exclusively for industrial process applications unless explicitly mentioned in the relevant part 2 or the equipment standard. However, this document can be applied to evaluate **humidity sensing controls** intended specifically for industrial applications in cases where no relevant safety standard exists;
- take into account the response value of an automatic action of a **humidity sensing control**, if such a response value is dependent upon the method of mounting the **humidity sensing control** in the equipment. Where a response value is of significant purpose for the protection of the user, or surroundings, the value defined in the appropriate equipment standard or as determined by the manufacturer will apply;
- address the integrity of the output signal to the network devices, such as interoperability with other devices unless it has been evaluated as part of the control system.

## 2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

## INTERNATIONAL ELECTROTECHNICAL COMMISSION

---

### Automatic electrical controls - Part 2-13: Particular requirements for humidity sensing controls

#### FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) IEC draws attention to the possibility that the implementation of this document may involve the use of (a) patent(s). IEC takes no position concerning the evidence, validity or applicability of any claimed patent rights in respect thereof. As of the date of publication of this document, IEC had not received notice of (a) patent(s), which may be required to implement this document. However, implementers are cautioned that this may not represent the latest information, which may be obtained from the patent database available at <https://patents.iec.ch>. IEC shall not be held responsible for identifying any or all such patent rights.

IEC 60730-2-13 has been prepared by IEC technical committee 72: Automatic electrical controls. It is an International Standard.

This fourth edition cancels and replaces the third edition published in 2017. This edition constitutes a technical revision.

This edition includes the following significant technical changes with respect to the previous edition:

- a) adoption to IEC 60730-1:2022 with all of its significant changes to IEC 60730-1:2013, IEC 60730-1:2013/AMD1:2015 and IEC 60730-1:2013/AMD2:2020.

The text of this International Standard is based on the following documents:

Draft	Report on voting
72/1487/FDIS	72/1503/RVD

Full information on the voting for its approval can be found in the report on voting indicated in the above table.

The language used for the development of this International Standard is English.

This document was drafted in accordance with ISO/IEC Directives, Part 2, and developed in accordance with ISO/IEC Directives, Part 1 and ISO/IEC Directives, IEC Supplement, available at [www.iec.ch/members\\_experts/refdocs](http://www.iec.ch/members_experts/refdocs). The main document types developed by IEC are described in greater detail at [www.iec.ch/publications](http://www.iec.ch/publications).

A list of all parts of the IEC 60730 series, under the general title: *Automatic electrical controls*, can be found on the IEC website.

This part 2-13 is intended to be used in conjunction with IEC 60730-1. It was established on the basis of the sixth edition of that standard (2022). Consideration may be given to future editions of, or amendments to, IEC 60730-1.

This part 2-13 supplements or modifies the corresponding clauses in IEC 60730-1, so as to convert that publication into the IEC standard: Particular requirements for humidity sensing controls.

Where this part 2-13 states "addition", "modification" or "replacement", the relevant requirement, test specification or explanatory matter in Part 1 should be adapted accordingly.

When a particular subclause of Part 1 is not mentioned in this Part 2, that subclause applies.

In the development of a fully international standard it has been necessary to take into consideration the differing requirements resulting from practical experience in various parts of the world and to recognize the variation in national electrical systems and wiring rules.

The reader's attention is drawn to the fact that Annex Q, Annex R, Annex S and Annex T list all of the "in-some-country" clauses on differing practices of a less permanent nature relating to the subject of this document.

In this publication:

- 1) The following print types are used:
  - requirements proper: in roman type;
  - *test specifications*: in italic type;
  - explanatory matter: in smaller roman type.
  - Defined terms: **bold type**.
- 2) Subclauses, notes or items which are additional to those in Part 1 are numbered starting from 101, additional annexes are lettered AA, BB, etc.

The committee has decided that the contents of this document will remain unchanged until the stability date indicated on the IEC website under [webstore.iec.ch](http://webstore.iec.ch) in the data related to the specific document. At this date, the document will be

- reconfirmed,
- withdrawn, or
- revised.

## 1 Scope

This clause of Part 1 is replaced by the following:

This document applies to automatic **electrical humidity sensing controls**

- for use in, on, or in association with equipment for household appliance and similar use;

NOTE 1 Throughout this document, the word "equipment" means "appliance and equipment" and "controls" means "**humidity sensing control**".

- for building automation within the scope of ISO 16484 series and IEC 63044 series (HBES/BACS);
- for equipment that is used by the public, such as equipment intended to be used in shops, offices, hospitals, farms and commercial and industrial applications;

EXAMPLE 1 **Humidity sensing controls** for commercial catering, heating and air-conditioning equipment.

- that are **smart enabled controls**;

EXAMPLE 2 Smart grid control, remote interfaces/control of energy-consuming equipment including computer or smart phone.

- that are AC or DC powered controls with a rated voltage not exceeding 690 V AC or 600 V DC;
- used in, on, or in association with equipment that use electricity, gas, oil, solid fuel, solar thermal energy, etc., or a combination thereof;
- utilized as part of a control system or controls which are mechanically integral with multifunctional controls having non-electrical outputs;
- using NTC or **PTC thermistors** and to discrete **thermistors**, requirements for which are contained in Annex J;
- that are mechanically or electrically operated, responsive to or controlling such characteristics as temperature, pressure, passage of time, humidity, light, electrostatic effects, flow, or liquid level, current, voltage, acceleration, or combinations thereof;
- as well as manual controls when such are electrically and/or mechanically integral with automatic controls.

NOTE 2 Requirements for manually actuated mechanical switches not forming part of an automatic control are contained in IEC 61058-1-1.

This document applies to

- the inherent safety of automatic **electrical humidity sensing controls**, and
- functional safety of automatic **electrical humidity sensing controls** and safety related systems,
- **humidity sensing controls** where the performance (for example the effect of EMC phenomena) of the product can impair the overall safety and performance of the controlled system,
- the operating values, operating times, and operating sequences where such are associated with equipment safety.

This document specifies the requirements for construction, operation and testing of automatic electrical **humidity sensing controls** used in, on, or in association with an equipment.

This document does not

- apply to automatic **electrical humidity sensing controls** intended exclusively for industrial process applications unless explicitly mentioned in the relevant part 2 or the equipment standard. However, this document can be applied to evaluate **humidity sensing controls** intended specifically for industrial applications in cases where no relevant safety standard exists;
- take into account the response value of an automatic action of a **humidity sensing control**, if such a response value is dependent upon the method of mounting the **humidity sensing control** in the equipment. Where a response value is of significant purpose for the protection of the user, or surroundings, the value defined in the appropriate equipment standard or as determined by the manufacturer will apply;
- address the integrity of the output signal to the network devices, such as interoperability with other devices unless it has been evaluated as part of the control system.

## 2 Normative references

# COMMISSION ÉLECTROTECHNIQUE INTERNATIONALE

---

## **Dispositifs de commande électrique automatiques - Partie 2-13: Exigences particulières pour les dispositifs de commande sensibles à l'humidité**

### AVANT-PROPOS

- 1) La Commission Électrotechnique Internationale (IEC) est une organisation mondiale de normalisation composée de l'ensemble des comités électrotechniques nationaux (Comités nationaux de l'IEC). L'IEC a pour objet de favoriser la coopération internationale pour toutes les questions de normalisation dans les domaines de l'électricité et de l'électronique. À cet effet, l'IEC – entre autres activités – publie des Normes internationales, des Spécifications techniques, des Rapports techniques, des Spécifications accessibles au public (PAS) et des Guides (ci-après dénommés "Publication(s) de l'IEC"). Leur élaboration est confiée à des comités d'études, aux travaux desquels tout Comité national intéressé par le sujet traité peut participer. Les organisations internationales, gouvernementales et non gouvernementales, en liaison avec l'IEC, participent également aux travaux. L'IEC collabore étroitement avec l'Organisation Internationale de Normalisation (ISO), selon des conditions fixées par accord entre les deux organisations.
- 2) Les décisions ou accords officiels de l'IEC concernant les questions techniques représentent, dans la mesure du possible, un accord international sur les sujets étudiés, étant donné que les Comités nationaux de l'IEC intéressés sont représentés dans chaque comité d'études.
- 3) Les Publications de l'IEC se présentent sous la forme de recommandations internationales et sont agréées comme telles par les Comités nationaux de l'IEC. Tous les efforts raisonnables sont entrepris afin que l'IEC s'assure de l'exactitude du contenu technique de ses publications; l'IEC ne peut pas être tenue responsable de l'éventuelle mauvaise utilisation ou interprétation qui en est faite par un quelconque utilisateur final.
- 4) Dans le but d'encourager l'uniformité internationale, les Comités nationaux de l'IEC s'engagent, dans toute la mesure possible, à appliquer de façon transparente les Publications de l'IEC dans leurs publications nationales et régionales. Toutes divergences entre toutes Publications de l'IEC et toutes publications nationales ou régionales correspondantes doivent être indiquées en termes clairs dans ces dernières.
- 5) L'IEC elle-même ne fournit aucune attestation de conformité. Des organismes de certification indépendants fournissent des services d'évaluation de conformité et, dans certains secteurs, accèdent aux marques de conformité de l'IEC. L'IEC n'est responsable d'aucun des services effectués par les organismes de certification indépendants.
- 6) Tous les utilisateurs doivent s'assurer qu'ils sont en possession de la dernière édition de cette publication.
- 7) Aucune responsabilité ne doit être imputée à l'IEC, à ses administrateurs, employés, auxiliaires ou mandataires, y compris ses experts particuliers et les membres de ses comités d'études et des Comités nationaux de l'IEC, pour tout préjudice causé en cas de dommages corporels et matériels, ou de tout autre dommage de quelque nature que ce soit, directe ou indirecte, ou pour supporter les coûts (y compris les frais de justice) et les dépenses découlant de la publication ou de l'utilisation de cette Publication de l'IEC ou de toute autre Publication de l'IEC, ou au crédit qui lui est accordé.
- 8) L'attention est attirée sur les références normatives citées dans cette publication. L'utilisation de publications référencées est obligatoire pour une application correcte de la présente publication.
- 9) L'IEC attire l'attention sur le fait que la mise en application du présent document peut entraîner l'utilisation d'un ou de plusieurs brevets. L'IEC ne prend pas position quant à la preuve, à la validité et à l'applicabilité de tout droit de brevet revendiqué à cet égard. À la date de publication du présent document, l'IEC n'avait pas reçu notification qu'un ou plusieurs brevets pouvaient être nécessaires à sa mise en application. Toutefois, il y a lieu d'avertir les responsables de la mise en application du présent document que des informations plus récentes sont susceptibles de figurer dans la base de données de brevets, disponible à l'adresse <https://patents.iec.ch>. L'IEC ne saurait être tenue pour responsable de ne pas avoir identifié de tels droits de brevets.

L'IEC 60730-2-13 a été établie par le comité d'études 72 de l'IEC: Commandes électriques automatiques. Il s'agit d'une Norme internationale.

Cette quatrième édition annule et remplace la troisième édition parue en 2017. Cette édition constitue une révision technique.

Cette édition inclut les modifications techniques majeures suivantes par rapport à l'édition précédente:

- a) adoption de l'IEC 60730-1:2022 avec toutes les modifications majeures par rapport à l'IEC 60730-1:2013, l'IEC 60730-1:2013/AMD1:2015 et l'IEC 60730-1:2013/AMD2:2020.

Le texte de cette Norme internationale est issu des documents suivants:

Projet	Rapport de vote
72/1487/FDIS	72/1503/RVD

Le rapport de vote indiqué dans le tableau ci-dessus donne toute information sur le vote ayant abouti à son approbation.

La langue employée pour l'élaboration de cette Norme internationale est l'anglais.

Ce document a été rédigé selon les Directives ISO/IEC, Partie 2, il a été développé selon les Directives ISO/IEC, Partie 1 et les Directives ISO/IEC, Supplément IEC, disponibles sous [www.iec.ch/members\\_experts/refdocs](http://www.iec.ch/members_experts/refdocs). Les principaux types de documents développés par l'IEC sont décrits plus en détail sous [www.iec.ch/standardsdev/publications](http://www.iec.ch/standardsdev/publications).

Une liste de toutes les parties de la série IEC 60730, publiées sous le titre général: *Dispositifs de commande électrique automatiques*, se trouve sur le site web de l'IEC.

La présente partie 2-13 est destinée à être utilisée conjointement avec l'IEC 60730-1. Elle a été établie sur la base de la sixième édition de cette norme (2022). Les éditions futures de l'IEC 60730-1 ou ses amendements pourront être pris en considération.

La présente partie 2-13 complète ou modifie les articles correspondants de l'IEC 60730-1, de façon à transformer cette publication en norme IEC: Exigences particulières pour les dispositifs de commande sensibles à l'humidité.

Lorsque la présente partie 2-13 spécifie "addition", "modification" ou "remplacement", il convient d'adapter l'exigence, la modalité d'essai ou la note correspondante de la Partie 1 en conséquence.

Lorsqu'un paragraphe particulier de la Partie 1 n'est pas mentionné dans cette Partie 2, ce paragraphe s'applique.

Pour les besoins d'élaboration d'une Norme internationale, il a été nécessaire d'examiner les différentes exigences en s'appuyant sur l'expérience pratique acquise dans différentes régions du monde et d'identifier les variantes nationales au niveau des réseaux d'alimentation électrique et des règles d'installation.

L'attention du lecteur est attirée sur le fait que l'Annexe Q, l'Annexe R, l'Annexe S et l'Annexe T donnent une liste de tous les articles qui traitent des différences de pratiques à caractère moins permanent qui existent dans certains pays dans le domaine couvert par le présent document.

Dans cette publication:

- 1) Les caractères d'imprimerie suivants sont utilisés:
  - exigences proprement dites: caractères romains;
  - *modalités d'essais: caractères italiques*;
  - notes: petits caractères romains;
  - termes définis: **caractères gras**.
- 2) Les paragraphes, notes ou articles qui s'ajoutent à ceux de la Partie 1 sont numérotés à partir de 101 et les annexes qui sont ajoutées sont désignées AA, BB, etc.

Le comité a décidé que le contenu de ce document ne sera pas modifié avant la date de stabilité indiquée sur le site web de l'IEC sous [webstore.iec.ch](http://webstore.iec.ch) dans les données relatives au document recherché. À cette date, le document sera

- reconduit,
- supprimé, ou
- révisé.

## 1 Domaine d'application

L'article de la Partie 1 est remplacé par le texte suivant:

Le présent document s'applique aux **dispositifs de commande électrique automatiques sensibles à la l'humidité**

- utilisés dans, sur ou avec des matériels pour appareil domestique et usage analogue;

NOTE 1 Dans le présent document, le terme "matériel" signifie "appareil et matériel" et "dispositifs de commande" signifie "**dispositifs de commande sensibles à l'humidité**".

- pour l'automatisation des bâtiments qui relèvent du domaine d'application de la série ISO 16484 et de la série IEC 63044 (HBES/BACS);
- pour des matériels utilisés par le public, tels que les matériels destinés à être utilisés dans des magasins, des bureaux, des hôpitaux, des fermes et des applications commerciales et industrielles;

EXEMPLE 1 Les **dispositifs de commande sensibles à l'humidité** pour les installations de restauration, de chauffage et d'air conditionné.

- qui sont des **dispositifs de commande activés intelligents**;

EXEMPLE 2 Les dispositifs de commande de réseau intelligent, les interfaces distantes/dispositifs de commande de matériels utilisateurs d'énergie électrique, y compris les ordinateurs ou les mobiles multifonctions.

- qui sont des dispositifs de commande à courant alternatif ou continu dont la tension assignée ne dépasse pas 690 V en courant alternatif ou 600 V en courant continu;
- qui sont utilisés dans, sur ou avec des matériels qui utilisent l'électricité, le gaz, le pétrole, des combustibles solides, l'énergie thermique solaire, etc. ou une combinaison de ces sources d'énergie;
- qui sont utilisés dans le cadre d'un système de commande ou de dispositifs de commande qui sont mécaniquement intégrés à des dispositifs de commande multifonctions comportant des sorties non électriques;
- qui utilisent des **thermistances CTN** ou CTP ainsi qu'aux dispositifs à **thermistances** discrètes, dont les exigences sont fournies à l'Annexe J;
- à commande mécanique ou électrique, qui réagissent à des caractéristiques telles que la température, la pression, le passage du temps, l'humidité, la lumière, les effets électrostatiques, le débit ou le niveau d'un liquide, le courant, la tension, l'accélération, ou une combinaison de ces caractéristiques, ou qui les régulent;
- ainsi qu'aux dispositifs de commande manuels qui sont électriquement et/ou mécaniquement intégrés à des dispositifs de commande automatique.

NOTE 2 Les exigences relatives aux interrupteurs mécaniques à action manuelle qui ne font pas partie d'un dispositif de commande automatique sont contenues dans l'IEC 61058-1-1.

Le présent document s'applique

- à la sécurité intrinsèque des **dispositifs de commande électrique automatiques sensibles à l'humidité**; et
- à la sécurité fonctionnelle des **dispositifs de commande électrique automatiques sensibles à l'humidité** et des systèmes de sécurité;
- aux **dispositifs de commande sensibles à l'humidité** pour lesquels les performances (par exemple, l'effet des phénomènes CEM) du produit peuvent compromettre la sécurité et les performances globales du système commandé;
- aux valeurs de fonctionnement, aux temps de fonctionnement et aux séquences de fonctionnement lorsque ces éléments interviennent dans la sécurité du matériel.

Le présent document spécifie les exigences relatives à la construction, au fonctionnement et aux essais des **dispositifs de commande électrique automatiques sensibles à l'humidité** utilisés dans, sur ou avec du matériel.

Le présent document

- ne s'applique pas aux **dispositifs de commande électrique** automatiques **sensibles à l'humidité** destinés exclusivement à des applications de processus industriels, sauf mention particulière dans la partie 2 applicable ou la norme du matériel. Toutefois, le présent document peut être utilisé pour évaluer les **dispositifs de commande sensibles à l'humidité** destinés spécifiquement aux applications industrielles lorsqu'il n'existe aucune norme de sécurité pertinente;
- ne prend pas en compte la valeur de réponse d'une action automatique d'un **dispositif de commande sensible à l'humidité**, lorsque cette valeur de réponse dépend de la méthode de montage du **dispositif de commande sensible à l'humidité** dans le matériel. Lorsqu'une valeur de réponse est importante du point de vue de la protection de l'utilisateur ou de l'environnement, la valeur définie dans la norme de matériel pertinente ou déterminée par le fabricant s'applique;
- ne traite pas de l'intégrité du signal de sortie transmis aux dispositifs de réseau, comme l'interopérabilité avec d'autres dispositifs, à moins qu'elle ait été évaluée comme partie intégrante du système de commande.

## 2 Références normatives

L'article de la Partie 1 s'applique.
