**Electrical accessories – Circuit-breakers for overcurrent protection for household and similar installations –
Part 3: Circuit-breakers for DC operation**

CONTENTS

FOREWORD	9
1 Scope	11
2 Normative references	12
3 Terms and definitions	12
3.1 Devices	13
3.2 General terms	13
3.3 Constructional elements	15
3.4 Conditions of operation	18
3.5 Characteristic quantities	19
3.6 Definitions related to insulation co-ordination	23
4 Classification	25
4.1 General	25
4.2 According to the number of poles	25
4.3 According to the current direction through the poles	25
4.4 According to the protection against external influences	26
4.5 According to the method of mounting	26
4.6 According to the methods of connection	26
4.6.1 According to the fixation system	26
4.6.2 According to the type of terminals	26
4.7 According to the instantaneous tripping current (see 3.5.18)	26
5 Characteristics of circuit-breakers	26
5.1 List of characteristics	26
5.2 Rated quantities	27
5.2.1 Rated voltages	27
5.2.2 Rated direct current (I_n)	27
5.2.3 Rated short-circuit capacity (I_{cn})	27
5.2.4 Rated making and breaking capacity of an individual pole (I_{cn1})	27
5.3 Standard and preferred values	28
5.3.1 Preferred values of rated voltage	28
5.3.2 Preferred values of rated current	28
5.3.3 Values of rated short-circuit capacity	28
5.3.4 Standard ranges of instantaneous tripping	29
5.3.5 Standard value of rated impulse withstand voltage (U_{imp})	29
6 Marking and other product information	29
7 Standard conditions for operation in service	31
7.1 General	31
7.2 Ambient air temperature range	31
7.3 Altitude	31
7.4 Atmospheric conditions	31
7.5 Conditions of installation	31
7.6 Pollution degree	31
8 Requirements for construction and operation	31
8.1 Mechanical design	31
8.1.1 General	31
8.1.2 Mechanism	32

8.1.3	Clearances and creepage distances (see Annex A)	33
8.1.4	Screws, current-carrying parts and connections	35
8.1.5	Terminals for external conductors	36
8.1.6	Non-interchangeability	38
8.1.7	Mechanical mounting of plug-in type circuit-breakers	39
8.2	Protection against electric shock	39
8.3	Dielectric properties and isolating capability	40
8.3.1	General	40
8.3.2	Dielectric properties	40
8.3.3	Isolating capability	40
8.3.4	Dielectric strength at rated impulse withstand voltage (U_{imp})	40
8.4	Temperature rise	40
8.4.1	Temperature rise limits	40
8.4.2	Ambient air temperature	41
8.5	Uninterrupted duty	41
8.6	Automatic operation	41
8.6.1	Standard time-current zone	41
8.6.2	Conventional quantities	42
8.6.3	Tripping characteristic	42
8.7	Mechanical and electrical endurance	43
8.8	Performance at short-circuit currents and at small DC currents	43
8.9	Resistance to mechanical shock and impact	43
8.10	Resistance to heat	43
8.11	Resistance to abnormal heat and to fire	43
8.12	Resistance to rusting	43
8.13	Behaviour in case of making inrush current	43
8.14	Power loss	44
8.15	Requirement of small DC currents	44
9	Tests	44
9.1	Type tests and test sequences	44
9.2	Test conditions	45
9.3	Test of indelibility of marking	46
9.4	Test of reliability of screws, current-carrying parts and connections	47
9.5	Tests of reliability of screw-type terminals for external copper conductors	48
9.6	Test of protection against electric shock	49
9.7	Test of dielectric properties	50
9.7.1	Resistance to humidity	50
9.7.2	Insulation resistance of the main circuit	50
9.7.3	Dielectric strength of the main circuit	51
9.7.4	Insulation resistance and dielectric strength of auxiliary circuits	52
9.7.5	Verification of impulse withstand voltages (across clearances and across solid insulation) and of leakage current across open contacts	53
9.8	Test of temperature rise and measurement of power loss	55
9.8.1	Ambient air temperature	55
9.8.2	Test procedure	55
9.8.3	Measurement of the temperature of parts	55
9.8.4	Temperature rise of a part	56
9.8.5	Measurement of power loss	56
9.9	28-day test	56

9.10	Test of tripping characteristic	56
9.10.1	General	56
9.10.2	Test of time-current characteristic.....	56
9.10.3	Test of instantaneous tripping, of correct opening of the contacts and of the trip-free function	57
9.10.4	Test of effect of single-pole loading on the tripping characteristic of multipole circuit-breakers.....	58
9.10.5	Test of effect of ambient temperature on the tripping characteristic	58
9.11	Verification of mechanical and electrical endurance	58
9.11.1	General test conditions	58
9.11.2	Test procedure	59
9.11.3	Condition of the circuit-breaker after test	59
9.12	Short-circuit tests.....	60
9.12.1	General	60
9.12.2	Values of test quantities	60
9.12.3	Tolerances on test quantities.....	61
9.12.4	Test circuit for short-circuit performance.....	61
9.12.5	Time constant of the test circuits	62
9.12.6	Measurement and verification of I^2t and of the peak current (I_p).....	62
9.12.7	Calibration of the test circuit	62
9.12.8	Interpretation of records	62
9.12.9	Condition of the circuit-breaker for test	63
9.12.10	Behaviour of the circuit-breaker during short-circuit tests.....	64
9.12.11	Test procedure	64
9.12.12	Verification of the circuit breaker after short circuit tests.....	67
9.13	Mechanical stresses	68
9.13.1	Mechanical shock	68
9.13.2	Resistance to mechanical stresses and impact	68
9.14	Test of resistance to heat.....	71
9.15	Resistance to abnormal heat and to fire	72
9.16	Test of resistance to rusting.....	73
9.17	Verification of the behaviour in case of making inrush current.....	73
9.17.1	General	73
9.17.2	Values of the test quantities.....	74
9.17.3	Limit deviations of the test quantities	74
9.17.4	Test circuit for the determination of the withstand capacity against making currents	74
9.17.5	Testing for determination of the withstand capacity against making currents	74
Annex A (normative)	Determination of clearances and creepage distances	88
A.1	General.....	88
A.2	Orientation and location of a creepage distance.....	88
A.3	Creepage distances where more than one material is used	88
A.4	Creepage distances split by floating conductive part	88
A.5	Measurement of creepage distances and clearances	88
Annex B (normative)	Test sequences and number of samples necessary to prove compliance with this document	93
B.1	Test sequences	93
B.2	Number of samples to be submitted for full test procedure and acceptance criteria	94

B.3	Number of samples to be submitted for simplified test procedure	95
Annex C (informative) Co-ordination under short-circuit conditions between a circuit-breaker and another short-circuit protective device (SCPD) associated in the same circuit.....		
C.1	General.....	98
C.2	Purpose	98
C.3	General requirements for the co-ordination of a circuit-breaker with another SCPD	99
C.3.1	General consideration.....	99
C.3.2	Take-over current	99
C.3.3	Behaviour of C_1 in association with another SCPD	99
C.4	Type and characteristics of the associated SCPD	99
C.5	Verification of selectivity	100
C.6	Verification of back-up protection.....	100
C.6.1	Determination of the take-over current.....	100
C.6.2	Verification of back-up protection.....	100
C.6.3	Tests for verification of back-up protection	101
C.6.4	Results to be obtained	102
Annex D (informative) Examples of terminals.....		
Annex E (informative) Correspondence between IEC and AWG copper conductors.....		
Annex F (normative) Arrangement for short-circuit test		
Annex G (normative) Routine tests		
G.1	General.....	113
G.2	Tripping tests	113
G.3	Verification of clearances between open contacts	113

INTERNATIONAL ELECTROTECHNICAL COMMISSION

ELECTRICAL ACCESSORIES – CIRCUIT-BREAKERS FOR OVERCURRENT PROTECTION FOR HOUSEHOLD AND SIMILAR INSTALLATIONS –

Part 3: Circuit-breakers for DC operation

FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

This consolidated version of the official IEC Standard and its amendment has been prepared for user convenience.

IEC 60898-3 edition 1.1 contains the first edition (2019-04) [documents 23E/1122/FDIS and 23E/1126/RVD] and its amendment 1 (2022-02) [documents 23E/1229/CDV and 23E/1126/RVD].

In this Redline version, a vertical line in the margin shows where the technical content is modified by amendment 1. Additions are in green text, deletions are in strikethrough red text. A separate Final version with all changes accepted is available in this publication.

International Standard IEC 60898-3 has been prepared by sub-committee 23E: Circuit-breakers and similar equipment for household use, of IEC technical committee 23: Electrical accessories.

This document has been drafted in accordance with the ISO/IEC Directives, Part 2.

A list of all parts in the IEC 60898 series, published under the general title *Electrical accessories – Circuit-breakers for overcurrent protection for household and similar installations*, can be found on the IEC website.

In this document, the following print types are used:

- Requirements proper: in roman type.
- *Test specifications: in italic type.*
- Explanatory matter: in smaller roman type.

The following differences exist in the countries indicated below.

- 4.7, Note 2: In China, other ranges of instantaneous tripping defined by the manufacturer are allowed.
- Clause 6, Notes 1 and 2: In the following countries: DK, FI, NO, SE and ZA the marking of the symbol on the circuit-breaker is mandatory to indicate that the device provides isolation for the installation downstream. In Australia this marking on the circuit-breaker is mandatory but is not required to be visible after installation.
- H.1, Note: In CZ, DK, NL, NO and CH, the upper limit of current for use of screwless terminals is 16 A.
- H.3.3, Note 1 to entry: In the following countries only universal screwless type terminals are accepted: AT, BE, CN, DK, DE, ES, FR, IT, PT and SE.
- Clause I.1, Note: The use of circuit-breakers with flat quick-connect terminations for rated currents up to and including 20 A is accepted in BE, FR, IT, ES, PT and US.
- I.8.2.2, Note 1: The use for rated currents up to and including 20 A is accepted in BE, FR, IT, PT, ES and US.
- Clause J.1, Note: In Austria, Australia and Germany, the use of aluminium screw-type terminals for use with copper conductors is not allowed.
- In Austria and Germany, terminals for aluminium conductors only are not allowed.
- In Spain, the use of aluminium conductors is not allowed for final circuits in household and similar installations e.g. offices, shops.
- In Denmark, the minimum cross-sectional area for aluminium conductors is 16 mm².

The committee has decided that the contents of the base publication and its amendment will remain unchanged until the stability date indicated on the IEC web site under webstore.iec.ch in the data related to the specific publication. At this date, the publication will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

IMPORTANT – The 'colour inside' logo on the cover page of this publication indicates that it contains colours which are considered to be useful for the correct understanding of its contents. Users should therefore print this document using a colour printer.

ELECTRICAL ACCESSORIES – CIRCUIT-BREAKERS FOR OVERCURRENT PROTECTION FOR HOUSEHOLD AND SIMILAR INSTALLATIONS –

Part 3: Circuit-breakers for DC operation

1 Scope

This part of IEC 60898 applies to DC circuit-breakers, having a rated DC voltage not exceeding 440 V, a rated current not exceeding 125 A and a rated short-circuit capacity not exceeding 10 000 A.

These circuit-breakers are intended for the protection against overcurrents of wiring installations of buildings and similar applications; they are designed for use by uninstructed people and for not being maintained.

They are intended for use in an environment with pollution degree 2.

They are suitable for isolation.

Circuit-breakers in compliance with this document are suitable for use in TN, TT, and, under specific conditions, IT systems.

This document also applies to circuit-breakers having more than one rated current, provided that the means for changing from one discrete rating to another is not accessible in normal service and that the rating cannot be changed without the use of a tool.

This document does not apply to

- circuit-breakers intended to protect motors;
- circuit-breakers, the current setting of which is adjustable by means accessible to the user.

For circuit-breakers having a degree of protection higher than IP20 according to IEC 60529, for use in locations where arduous environmental conditions prevail (e.g. excessive humidity, heat or cold or deposition of dust) and in hazardous locations (e.g. where explosions are liable to occur), special constructions can be required.

For an environment with a higher pollution degree, enclosures giving the appropriate degree of protection are used.

This document does not apply to circuit-breakers for AC operation, which is covered by IEC 60898-1.

This document does not apply to circuit-breakers for AC and DC operation, which is covered by IEC 60898-2.

Circuit breakers according to this document have a high resistance against unwanted tripping, regardless whether caused by in-rush currents through loading of electronic loads or by switching operations in the circuit.

NOTE Circuit-breakers within the scope of this document can also be used for protection against electric shock in case of a fault, depending on their tripping characteristics and on the characteristics of the installation. The criterion of application for such purposes is dealt with by installation rules.

This document contains all requirements necessary to ensure compliance with the operational characteristics required for these devices by type tests.

It also contains the details relative to test requirements and methods of testing necessary to ensure reproducibility of test results.

Guidance on the coordination, under short-circuit conditions, between a circuit-breaker and another short-circuit protective device (SCPD) is given in Annex C.

Routine tests intended to reveal, as far as safety is concerned, unacceptable variations in material or manufacture are given in Annex G.

2 Normative references

INTERNATIONAL ELECTROTECHNICAL COMMISSION

ELECTRICAL ACCESSORIES – CIRCUIT-BREAKERS FOR OVERCURRENT PROTECTION FOR HOUSEHOLD AND SIMILAR INSTALLATIONS –

Part 3: Circuit-breakers for DC operation

FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

This consolidated version of the official IEC Standard and its amendment has been prepared for user convenience.

IEC 60898-3 edition 1.1 contains the first edition (2019-04) [documents 23E/1122/FDIS and 23E/1126/RVD] and its amendment 1 (2022-02) [documents 23E/1229/CDV and 23E/1126/RVD].

This Final version does not show where the technical content is modified by amendment 1. A separate Redline version with all changes highlighted is available in this publication.

International Standard IEC 60898-3 has been prepared by sub-committee 23E: Circuit-breakers and similar equipment for household use, of IEC technical committee 23: Electrical accessories.

This document has been drafted in accordance with the ISO/IEC Directives, Part 2.

A list of all parts in the IEC 60898 series, published under the general title *Electrical accessories – Circuit-breakers for overcurrent protection for household and similar installations*, can be found on the IEC website.

In this document, the following print types are used:

- Requirements proper: in roman type.
- *Test specifications: in italic type.*
- Explanatory matter: in smaller roman type.

The following differences exist in the countries indicated below.

- 4.7, Note 2: In China, other ranges of instantaneous tripping defined by the manufacturer are allowed.
- Clause 6, Notes 1 and 2: In the following countries: DK, FI, NO, SE and ZA the marking of the symbol on the circuit-breaker is mandatory to indicate that the device provides isolation for the installation downstream. In Australia this marking on the circuit-breaker is mandatory but is not required to be visible after installation.
- H.1, Note: In CZ, DK, NL, NO and CH, the upper limit of current for use of screwless terminals is 16 A.
- H.3.3, Note 1 to entry: In the following countries only universal screwless type terminals are accepted: AT, BE, CN, DK, DE, ES, FR, IT, PT and SE.
- Clause I.1, Note: The use of circuit-breakers with flat quick-connect terminations for rated currents up to and including 20 A is accepted in BE, FR, IT, ES, PT and US.
- I.8.2.2, Note 1: The use for rated currents up to and including 20 A is accepted in BE, FR, IT, PT, ES and US.
- Clause J.1, Note: In Austria, Australia and Germany, the use of aluminium screw-type terminals for use with copper conductors is not allowed.
- In Austria and Germany, terminals for aluminium conductors only are not allowed.
- In Spain, the use of aluminium conductors is not allowed for final circuits in household and similar installations e.g. offices, shops.
- In Denmark, the minimum cross-sectional area for aluminium conductors is 16 mm².

The committee has decided that the contents of the base publication and its amendment will remain unchanged until the stability date indicated on the IEC web site under webstore.iec.ch in the data related to the specific publication. At this date, the publication will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

ELECTRICAL ACCESSORIES – CIRCUIT-BREAKERS FOR OVERCURRENT PROTECTION FOR HOUSEHOLD AND SIMILAR INSTALLATIONS –

Part 3: Circuit-breakers for DC operation

1 Scope

This part of IEC 60898 applies to DC circuit-breakers, having a rated DC voltage not exceeding 440 V, a rated current not exceeding 125 A and a rated short-circuit capacity not exceeding 10 000 A.

These circuit-breakers are intended for the protection against overcurrents of wiring installations of buildings and similar applications; they are designed for use by uninstructed people and for not being maintained.

They are intended for use in an environment with pollution degree 2.

They are suitable for isolation.

Circuit-breakers in compliance with this document are suitable for use in TN, TT, and, under specific conditions, IT systems.

This document also applies to circuit-breakers having more than one rated current, provided that the means for changing from one discrete rating to another is not accessible in normal service and that the rating cannot be changed without the use of a tool.

This document does not apply to

- circuit-breakers intended to protect motors;
- circuit-breakers, the current setting of which is adjustable by means accessible to the user.

For circuit-breakers having a degree of protection higher than IP20 according to IEC 60529, for use in locations where arduous environmental conditions prevail (e.g. excessive humidity, heat or cold or deposition of dust) and in hazardous locations (e.g. where explosions are liable to occur), special constructions can be required.

For an environment with a higher pollution degree, enclosures giving the appropriate degree of protection are used.

This document does not apply to circuit-breakers for AC operation, which is covered by IEC 60898-1.

This document does not apply to circuit-breakers for AC and DC operation, which is covered by IEC 60898-2.

Circuit breakers according to this document have a high resistance against unwanted tripping, regardless whether caused by in-rush currents through loading of electronic loads or by switching operations in the circuit.

NOTE Circuit-breakers within the scope of this document can also be used for protection against electric shock in case of a fault, depending on their tripping characteristics and on the characteristics of the installation. The criterion of application for such purposes is dealt with by installation rules.

This document contains all requirements necessary to ensure compliance with the operational characteristics required for these devices by type tests.

It also contains the details relative to test requirements and methods of testing necessary to ensure reproducibility of test results.

Guidance on the coordination, under short-circuit conditions, between a circuit-breaker and another short-circuit protective device (SCPD) is given in Annex C.

Routine tests intended to reveal, as far as safety is concerned, unacceptable variations in material or manufacture are given in Annex G.

2 Normative references
