CONTENTS

FOREWORD.....	4
INTRODUCTION.....	6
1 Scope.....	7
2 Normative references	7
3 Terms, definitions and conventions.....	9
3.2 Conventions.....	9
4 Networking architecture, device models and guideline conventions	9
4.1 DLNA home networking architecture	9
4.2 Document conventions and conventions	9
4.3 Guideline structure and layout	9
5 DLNA Device Model.....	10
5.1 General.....	10
5.2 HTML5 RUI Device Functions	10
5.3 Device Capabilities	10
5.4 System usages	11
5.4.1 General	11
5.4.2 2-box RUI-H Pull with/without A/V system usage	12
5.4.3 3-box UI-only system usage.....	13
5.4.4 3-box UI with A/V system usage	16
6 HTML5 RUI guideline	17
6.1 General.....	17
6.2 Architecture and protocols	17
6.3 HTML5 Remote User Interfaces	18
6.3.1 General	18
6.3.2 Discovery of HTML5 Remote UI devices	18
6.3.3 RUI-H transport	21
6.3.4 Media Formats and AV metadata.....	23
6.3.5 Media Transport and control	27
6.3.6 Content Protection guidelines	31
6.3.7 HTML5 presentation and control: General.....	31
6.3.8 HTML5 presentation and control: HTML and DOM	32
6.3.9 HTML5 presentation and control: CSS	33
6.3.10 HTML5 presentation and control: Image and Font Formats	35
6.3.11 HTML5 presentation and control: JavaScript and JavaScript APIs	36
6.3.12 HTML5 presentation and control: Cross Origin Resource Sharing	41
6.3.13 Quality of Service	42
6.3.14 Presentation of MPEG-2 TS Elementary Streams	42
6.3.15 DLNA-HTML5-1.0 protocolInfo value.....	45
6.3.16 RUI-H service location caching	47
Annex A (informative) HTML5 RUI client capability detection	49
A.1 HTML5 client capability detection.....	49
A.2 CSS client capability detection	49
Annex B (informative) RUI-H updates	51
Annex C (informative) Web content authoring guidelines	52
C.1 General.....	52

C.2	Subtitles	52
C.3	Ad insertion	52
C.4	Media synchronized web content	52
C.5	Alternate audio program.....	52
C.6	Descriptive video service	52
C.7	Discovery of DLNA devices	53
C.8	In order to support 3-box AV scenario	53
C.9	Filtering DLNA AV content in the UI page.....	53
Annex D	(informative) Combining RUI-H with AV	54
D.1	2-box AV scenario using 2-box HTML5 RUI	54
D.2	3-box AV scenario using 2-box HTML5 RUI	54
Annex E	(informative) HTML5 input events	55
E.1	General.....	55
E.2	Key input	55
E.2.1	General	55
E.2.2	Key values set.....	56
E.3	Mouse.....	56
E.3.1	General	56
E.3.2	Event synthesis	56
E.3.3	Mouse order	56
E.3.4	Wheel	57
E.4	Touch	57
Annex F	(normative) DLNA-HTML5-1.0 Extended <protocolInfo> XSD Schema	58
Annex G	(informative) Examples of DLNA RUI-H service UIListing	59
G.1	Example of two RUI-H services	59
G.2	Example of single RUI-H service	60
G.3	Example of single RUI-H service with two URIs	60
Bibliography	62
Figure 1	— Relationship of RUI-H components	11
Figure 2	– RUI-H Pull without A/V system usage interaction model	12
Figure 3	– RUI-H Pull with A/V system usage interaction model.....	13

Table A.2	– CSS client capability detection	50

INTERNATIONAL ELECTROTECHNICAL COMMISSION

**DIGITAL LIVING NETWORK ALLIANCE (DLNA) HOME
NETWORKED DEVICE INTEROPERABILITY GUIDELINES –****Part 6-1: Remote User Interface – HTML5****FOREWORD**

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

International Standard IEC 62481-6-1 has been prepared under technical area 8: Multimedia home systems and applications for end-user network, of IEC technical committee 100: Audio, video and multimedia systems and equipment.

The text of this International Standard is based on the following documents:

CDV	Report on voting
100/2740/CDV	100/2887/RVC

Full information on the voting for the approval of this International Standard can be found in the report on voting indicated in the above table.

This document has been drafted in accordance with the ISO/IEC Directives, Part 2.

A list of all parts of IEC 62481 series, published under the general title *Digital Living Network Alliance (DLNA) home networked device interoperability guidelines*, can be found on the IEC website.

The committee has decided that the contents of this document will remain unchanged until the stability date indicated on the IEC website under "<http://webstore.iec.ch>" in the data related to the specific document. At this date, the document will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

A bilingual version of this publication may be issued at a later date.

IMPORTANT – The 'colour inside' logo on the cover page of this publication indicates that it contains colours which are considered to be useful for the correct understanding of its contents. Users should therefore print this document using a colour printer.

INTRODUCTION

Consumers are acquiring, viewing, and managing an increasing amount of digital media (photos, music, and video) on devices in the consumer electronics (CE), mobile, and personal computer (PC) domains. As such, they want to conveniently enjoy the content, regardless of the source, across different devices and locations in the home. The digital home vision integrates the Internet, mobile, and broadcast networks through a seamless, interoperable network, which will provide a unique opportunity for manufacturers and consumers alike. In order to deliver on this vision, a common set of industry design guidelines is needed that allows vendors to participate in a growing marketplace, leading to more innovation, simplicity, and value for consumers. This document serves that purpose and provides vendors with the information needed to build interoperable networked platforms and devices for the digital home.

DIGITAL LIVING NETWORK ALLIANCE (DLNA) HOME NETWORKED DEVICE INTEROPERABILITY GUIDELINES –

Part 6-1: Remote User Interface – HTML5

1 Scope

This part of IEC 62481-6 specifies guidelines that define HTML5 Remote User Interface (RUI-H). HTML5 allows operators to develop "write once, play anywhere" content applications across a broad range of browsers and platforms. Through native integration, HTML5 enables the repurposing of single codebases, resulting in reduced development costs and the provision of a unique UI for every device.

2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.
