CONTENTS

FOREWORD.....	6
1 Scope.....	8
2 Normative references	8
3 Terms, definitions, symbols and abbreviated terms.....	11
3.1 Terms and definitions.....	11
3.2 Symbols.....	17
3.3 Abbreviated terms.....	20
4 Compliance with IEC 60364 series	20
5 PV array system configuration	21
5.1 General.....	21
5.1.1 Functional configuration of a PV system	21
5.1.2 PV system topologies	21
5.1.3 Array electrical diagrams	22
5.1.4 Use of PCE with multiple DC inputs	28
5.1.5 PV arrays using DCUs	28
5.1.6 Series-parallel configuration	33
5.1.7 Batteries in systems	33
5.1.8 Backfeed and reverse currents	34
5.1.9 Considerations due to prospective fault current conditions within a PV array.....	34
5.1.10 Considerations due to operating temperature	34
5.1.11 Performance issues	35
5.1.12 Potential induced degradation.....	36
5.1.13 Corrosion.....	36
5.1.14 Mechanical design	36
5.1.15 Mechanical loads on PV structures	37
6 Safety issues.....	39
6.1 General.....	39
6.2 Protection against electric shock.....	39
6.2.1 General	39
6.2.2 Protective measure: double or reinforced insulation.....	39
6.2.3 Protective measure: extra-low-voltage provided by SELV or PELV.....	39
6.3 Protection against thermal effects	39
6.3.1 General	39
6.3.2 Protection against fire caused by arcs	40
6.3.3 Protection against arc flash	40
6.4 Protection against the effects of insulation faults	40
6.4.1 General	40
6.4.2 Segregation of PV circuits from other circuits	41
6.4.3 Earth fault detection and indication requirements.....	41
6.5 Protection against overcurrent	47
6.5.1 General	47
6.5.2 Requirement for overcurrent protection.....	47
6.5.3 Requirements for overcurrent protection of circuits	48
6.5.4 Overcurrent protection for PV systems connected to batteries	50
6.5.5 Overcurrent protection location.....	51
6.6 Protection against effects of lightning and overvoltage.....	51

6.6.1	General	51
6.6.2	Protection against overvoltage.....	52
7	Selection and erection of electrical equipment.....	53
7.1	General.....	53
7.2	Component requirements	54
7.2.1	General	54
7.2.2	Current rating of PV circuits.....	54
7.2.3	PV modules	55
7.2.4	PV array and PV string combiner boxes.....	56
7.2.5	Fuses	57
7.2.6	Circuit breakers used for overcurrent protection	57
7.2.7	Isolation means and isolation means with breaking capabilities	58
7.2.8	Cables	60
7.2.9	Plugs, sockets and connectors in PV circuits	62
7.2.10	Wiring in combiner boxes.....	63
7.2.11	Bypass diodes	63
7.2.12	Blocking diodes	64
7.2.13	Power conversion equipment (PCE) including DC conditioning units (DCUs)	64
7.3	Location and installation requirements	65
7.3.1	Isolation means	65
7.3.2	Earthing and bonding arrangements	67
7.3.3	Wiring system.....	70
8	Acceptance.....	74
9	Operation/maintenance.....	74
10	Marking and documentation.....	74
10.1	Equipment marking	74
10.2	Requirements for signs	74
10.3	Identification of a PV installation	74
10.4	Labelling of PV array and PV string combiner boxes	74
10.5	Labelling of isolation means.....	75
10.5.1	General	75
10.5.2	PV array isolation means with breaking capabilities	75
10.6	Warning sign for anti-PID equipment.....	75
10.7	Documentation.....	75
Annex A (informative)	Examples of signs	76
Annex B (informative)	Examples of system earthing configurations in PV arrays	77
Annex C (informative)	Blocking diode	80
C.1	General.....	80
C.2	Use of blocking diodes to prevent overcurrent/fault current in arrays.....	80
C.3	Examples of blocking diode use in fault situations.....	80
C.3.1	General	80
C.3.2	Short circuit in PV string	80
C.4	Specification of blocking diode.....	82
C.5	Heat dissipation design for blocking diode	82
Annex D (informative)	Arc fault detection and interruption in PV arrays.....	84
Annex E (normative)	DVC limits	85

Annex F (normative) Determination of maximum voltage and maximum currents in PV circuits	86
F.1 $U_{OC\ MAX}$	86
F.1.1 PV array maximum voltage	86
F.1.2 PV strings constructed using DC conditioning units	87
F.2 String maximum current	88
F.3 Calculation of potential fault currents originating from the array	88
F.3.1 General	88
F.3.2 String	88
F.3.3 Sub-array	88
F.3.4 Array	88
F.4 K_I factor – general	89
F.5 K_{Corr} factor – under unique environmental conditions	89
F.6 K_{Corr} factor – non optimally oriented monofacial arrays.....	90
F.7 K_{Corr} factor – bifacial arrays.....	90
F.8 K_{Corr} factor – for arrays containing non-optimally oriented bifacial modules	91
Annex G (normative) Backfeed current and PV reverse currents under fault conditions.....	92
G.1 General.....	92
G.2 Illustrated examples.....	92
G.3 Backfeed currents and PV reverse currents where subarrays are not combined in the PCE	94
Annex H (normative) Anti-PID	96
H.1 General.....	96
H.2 DC bias applied during night.....	96
H.3 DC bias applied to array output.....	97
H.4 DC bias applied to AC system.....	98
Annex I (informative) Arc flash.....	100
Annex J (normative) Qualification of DCU group voltage	101
J.1 Overview.....	101
J.2 Test 1: Maximum voltage operational test procedure.....	101
J.3 Test 2: Overvoltage test.....	101
Bibliography.....	103
Figure 1 – General functional configuration of a PV powered system	21
Figure 2 – PV array diagram – single string example	23
Figure 3 – PV array diagram – multiple parallel string example	24
Figure 4 – PV array diagram – multiple parallel string example with array divided into sub-arrays	25
Figure 5 – PV array example using a PCE with multiple MPPT DC inputs	26
Figure 6 – PV array example using a PCE with multiple DC inputs internally connected to a common DC bus	27
Figure 7 – PV string constructed using DCUs.....	29

Table F.3 – Example K_{Corr} values at different orientations and tilt for 47° north latitude	90

INTERNATIONAL ELECTROTECHNICAL COMMISSION

PHOTOVOLTAIC (PV) ARRAYS – Part 1: DESIGN REQUIREMENTS

FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) IEC draws attention to the possibility that the implementation of this document may involve the use of (a) patent(s). IEC takes no position concerning the evidence, validity or applicability of any claimed patent rights in respect thereof. As of the date of publication of this document, IEC had not received notice of (a) patent(s), which may be required to implement this document. However, implementers are cautioned that this may not represent the latest information, which may be obtained from the patent database available at <https://patents.iec.ch>. IEC shall not be held responsible for identifying any or all such patent rights.

IEC 62548-1 has been prepared by IEC technical committee 82: Solar photovoltaic energy systems. It is an International Standard.

This first edition cancels and replaces IEC 62548 published in 2016. This edition constitutes a technical revision.

This edition includes the following significant technical changes with respect to the previous edition:

- a) Revised provisions for systems including DC to DC conditioning units.
- b) Revision of mounting structure requirements.
- c) Revised cable requirements.
- d) Revision of Clause 6 on safety issues which includes provisions for protection against electric shock including array insulation monitoring and earth fault detection.
- e) Revision of 7.2.7 and 7.3 with respect to isolation means.

- f) Provisions for use of bifacial modules and modules mounted in non-optimal orientations.
- g) New Annex F containing: K_1 factor calculations for bifacial and non-optimally oriented systems; anti-PID equipment and arc flash.

The text of this International Standard is based on the following documents:

Draft	Report on voting
82/2174/FDIS	82/2193/RVD

Full information on the voting for its approval can be found in the report on voting indicated in the above table.

The language used for the development of this International Standard is English.

This document was drafted in accordance with ISO/IEC Directives, Part 2, and developed in accordance with ISO/IEC Directives, Part 1 and ISO/IEC Directives, IEC Supplement, available at www.iec.ch/members_experts/refdocs. The main document types developed by IEC are described in greater detail at www.iec.ch/standardsdev/publications.

The committee has decided that the contents of this document will remain unchanged until the stability date indicated on the IEC website under webstore.iec.ch in the data related to the specific document. At this date, the document will be

- reconfirmed,
- withdrawn, or
- revised.

IMPORTANT – The "colour inside" logo on the cover page of this document indicates that it contains colours which are considered to be useful for the correct understanding of its contents. Users should therefore print this document using a colour printer.

PHOTOVOLTAIC (PV) ARRAYS – Part 1: DESIGN REQUIREMENTS

1 Scope

This document sets out design requirements for photovoltaic (PV) arrays including DC array wiring, electrical protection devices, switching and earthing provisions. The scope includes all parts of the PV array and final power conversion equipment (PCE), but not including energy storage devices, loads or AC or DC distribution network supplying loads.

The object of this document is to address the design safety requirements arising from the particular characteristics of photovoltaic systems. Direct current systems, and PV arrays in particular, pose some hazards in addition to those derived from conventional AC power systems, including the ability to produce and sustain electrical arcs with currents that are not greater than normal operating currents.

In systems supplying AC loads or circuits, the safety requirements mentioned in this document are however critically dependent on the inverters associated with PV arrays complying with the requirements of IEC 62109-1, IEC 62109-2 and IEC 62109-3.

Installation requirements are also critically dependent on compliance with the IEC 60364 series (see Clause 4).

PV arrays of less than 100 W and less than 35 V DC open circuit voltage at STC are not covered by this document.

PV arrays in grid interconnected systems connected to medium or high voltage systems are not covered in this document, except as required by IEC TS 62738. Variations and additional requirements for large-scale ground mounted PV power plants with restricted access to personnel are addressed in IEC TS 62738.

Additional requirements may be needed for more specialized installations, for example concentrating systems, tracking systems or building integrated PV.

This document also includes extra protection requirements of PV arrays when they are directly connected with batteries at the DC level.

Attention is drawn to the co-existence of IEC 60364-7-712 and IEC 62548. Both standards have been developed in close coordination, respectively by IEC technical committees 64 and 82.
