## CONTENTS

FOREWORD.....	4
INTRODUCTION.....	6
1 Scope.....	7
2 Normative references.....	7
3 Abbreviations.....	7
4 General.....	8
5 Telecommunications industry information.....	8
6 Technical information.....	9
6.1 Electrical discharges.....	9
6.2 Surface plating. long and short term effects.....	10
6.3 IEEE 802.3af – Power-over-Ethernet environment (PoE).....	11
6.4 Factors affecting the connector durability and definition of a nominal contact zone.....	12
6.5 Acceptance criteria.....	13
7 Test procedures, test set-up description and results.....	14
7.1 General.....	14
7.2 Tests 1A and 2A – Evaluation of the mechanical damage.....	15
7.3 Tests 3A.....	15
7.4 Test 4A – Comparison of different IEC 60603-7 connectors.....	17
7.4.1 General.....	17
7.4.2 Tests – Visual inspection of contacts.....	17
7.4.3 Results and observations to test 4A.....	17
7.5 Test 5A – Resistive test setup simulating PoE power stress.....	19
7.5.1 General.....	19
7.5.2 Test setup.....	19
7.5.3 Tests – Visual inspection of contacts.....	19
7.5.4 Results and observations to test 5A.....	19
7.6 Test 6A – Engaging and separating with IEEE 802.3af hardware.....	20
7.6.1 PoE hardware.....	20
7.6.2 Tests – Visual inspection of contacts.....	21
7.6.3 Results – Test 6A.....	21
7.7 Test 7A and 8A – Effect of speed of contact separation.....	22
7.8 Tests 9A, 10A and 11A – Effect of the cord length.....	22
7.9 Test 12A – Effect of polarity.....	23
7.10 Test 13 A – Investigation of IEC 60603-7-7 or IEC 61076-3-110 connecting hardware.....	24
7.11 Tests 14A and 15 A. 100 m long cable test.....	25
8 Conclusions.....	26
9 Future work.....	26
Bibliography.....	28
Figure 1 – Illustration of a typical shielded 8-way connector according IEC 60603-7.....	9
Figure 2 – Illustration of an IEC 60603-7-7 or IEC 61076-3-110 connector.....	9
Figure 3 – Connecting hardware contacts.....	10
Figure 4 – Endspan PSE – Alternative A according to IEEE 802.3af.....	11

Figure 5 – Midspan PSE – Alternative B according to IEEE 802.3af .....	11
Figure 6 – Cables used in the study .....	12
Figure 7 – Illustration of contact engaging cycle.....	13
Figure 8 – Illustration of a nominal contact area concept.....	13
Figure 9 – Illustration of a low level contact resistance (bulk) test .....	14
Figure 10 – IEC 60603-7-7 connector contacts .....	15

**EFFECTS OF ENGAGING AND SEPARATING UNDER ELECTRICAL LOAD  
ON CONNECTOR INTERFACES IN CABLING USED TO SUPPORT  
IEEE 802.3af (POWER-OVER-ETHERNET) APPLICATIONS**

## FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

Technical Report IEC 62652 has been prepared by subcommittee 48B: Connectors, of IEC technical committee 48: Electromechanical components and mechanical structures for electronic equipment.

This publication has been drafted in accordance with the ISO/IEC Directives, Part 2.

The text of this standard is based on the following documents:

DTR	Report on voting
48B/2076/DTR	48B/2146/RVC

The committee has decided that the contents of this publication will remain unchanged until the stability date indicated on the IEC web site under "<http://webstore.iec.ch>" in the data related to the specific publication. At this date, the publication will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

A bilingual version of this publication may be issued at a later date.

**IMPORTANT – The 'colour inside' logo on the cover page of this publication indicates that it contains colours which are considered to be useful for the correct understanding of its contents. Users should therefore print this document using a colour printer.**

## INTRODUCTION

The ISO/IEC/JTC1/SC25 subcommittee requested IEC SC 48B to prepare an engaging and separating under electrical load test method to be referenced in their standards. This test method standard was published as IEC 60512-9-3:2006. The experts of SC 48B/WG5 were concerned about the effect of engaging/separating under electrical load on the IEC 60603-7 series connector interfaces that would be typically used in the IEEE 802.3af (PoE) applications. The experts developed a set of tests to evaluate the effects, the results of which are reported in this Technical Report.

NOTE “Engaging” and “Separating” are terms used in most IEC TC 48 publications to describe the physical mating or un-mating of connectors.

IEC 60050-581:1978, 581-08-08<sup>1</sup> defines the terms as follows:

**engaging and separating force**  
**connector mating and unmating force** (deprecated)

The force required to engage fully or separate a pair of mating components including the effect of a coupling, locking or similar device.

The IEC 60603-7 series of standards use the terms mating and un-mating throughout. To avoid confusion in reading this Technical Report and also the IEC 60603-7 series of standards, it is important to know that the term “engaging” is equivalent to “mating” and the term “separating” is equivalent to “un-mating”.

# EFFECTS OF ENGAGING AND SEPARATING UNDER ELECTRICAL LOAD ON CONNECTOR INTERFACES IN CABLING USED TO SUPPORT IEEE 802.3af (POWER-OVER-ETHERNET) APPLICATIONS

## 1 Scope

This Technical Report is intended to provide information on the effects of engaging and separating under electrical load on the connector interfaces in cabling, used to support IEEE 802.3af (Power-over-Ethernet (PoE)) applications.
