FOREWORD	4
1 Scope	6
2 Normative references	6
3 Terms and definitions	6
3.1 General terms	6
3.2 Characteristic parameters	10
4 Essential ratings and characteristic parameters	11
4.1 Identification and type	11
4.2 Limiting values and operating conditions	11
4.3 Additional information	12
5 Test method	12
5.1 General	12
5.1.1 General	12
5.1.2 Standard atmospheric conditions for test	13
5.1.3 Standard atmospheric conditions for measurement	13
5.2 Flat status	13
5.2.1 Measurement circuit	13
5.2.2 Measurement procedure	14
5.2.3 Essential parameters calculation	16
5.3 Bending status	18
5.3.1 General	18
5.3.2 Test procedure	19
5.4 Stretching status	22
5.4.1 General	22
5.4.2 Test procedure	23
6 Test reports	26
Annex A (informative) Classification of supercapacitors and its working principles	28
A.1 General	28
A.2 Classification	28
A.3 Working principles	28
A.3.1 Electrical double layer capacitor (EDLC)	28
A.3.2 Pseudocapacitor	29
A.3.3 Hybrid supercapacitor	29
Annex B (informative) Endurance test (continuous application of rated voltage at low or high temperature)	30
B.1 General	30
B.2 Test method	30
B.2.1 Test conditions	30
B.2.2 Test procedure	30
B.2.3 Recommendations	30
Annex C (informative) Other bending testers	32
C.1 Bending stage using fixed and moving stage	32
C.2 Bending stage using rotating motor	32
Annex D (informative) Classification of flexible and stretchable supercapacitor	34
D.1 Flexible and stretchable supercapacitor with sandwich structure	34
D.2 Flexible and stretchable supercapacitor with in-planar structure	34
D.3 Flexible and stretchable supercapacitor with wire-shaped structure	34
D.4 Flexible textile made by using wire-shape supercapacitor	35

FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

IEC 62830-8 has been prepared by IEC technical committee 47: Semiconductor devices. It is an International Standard.

The text of this International Standard is based on the following documents:

FDIS	Report on voting
47/2724/FDIS	47/2733/RVD

Full information on the voting for its approval can be found in the report on voting indicated in the above table.

The language used for the development of this International Standard is English.

This document was drafted in accordance with ISO/IEC Directives, Part 2, and developed in accordance with ISO/IEC Directives, Part 1 and ISO/IEC Directives, IEC Supplement, available at www.iec.ch/members_experts/refdocs. The main document types developed by IEC are described in greater detail at www.iec.ch/standardsdev/publications.

A list of all parts in the IEC 62830 series, published under the general title *Semiconductor devices – Semiconductor devices for energy harvesting and generation*, can be found on the IEC website.

The committee has decided that the contents of this document will remain unchanged until the stability date indicated on the IEC website under "<http://webstore.iec.ch>" in the data related to the specific document. At this date, the document will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

SEMICONDUCTOR DEVICES – SEMICONDUCTOR DEVICES FOR ENERGY HARVESTING AND GENERATION –

Part 8: Test and evaluation methods of flexible and stretchable supercapacitors for use in low power electronics

1 Scope

This part of IEC 62830 specifies terms, definitions, symbols, test, and evaluation methods used to determine the performance characteristics of flexible and stretchable supercapacitor for practical use in low power electronics such as energy storage devices for energy harvesting, flexible and stretchable electronics, low-power devices, IoT applications, etc. This document is applicable to all the flexible and stretchable supercapacitor for consumers and manufacturers, without any limitations of device technology and size.

2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.
