CONTENTS

FOREWORD.....	5
1 Scope.....	7
2 Normative references	7
3 Terms and definitions	7
4 General requirements	9
5 Electric power system requirements	9
5.1 General.....	9
5.2 Grid-connection	9
5.3 Relay protection and automatic safety devices.....	10
5.4 Dispatching automation.....	10
5.5 Electric power system communication.....	10
5.6 Electric energy metering	10
6 Solar resource assessment	10
7 Site selection.....	10
8 Overall planning	11
8.1 General.....	11
8.2 Off-site planning	12
8.3 On-site planning	12
9 Collector system.....	13
9.1 General.....	13
9.2 Collectors	13
9.3 Driving and tracking system	14
10 Heat transfer system	15
10.1 General.....	15
10.2 HTF storage and expansion system	15
10.3 HTF ullage system	16
10.4 HTF filling system	16
10.5 HTF anti-freezing system	17
11 Thermal energy storage system.....	17
11.1 General.....	17
11.2 Storage system of thermal storage medium	17
11.3 Heat transfer system of thermal storage medium	18
11.4 Additional components.....	19
12 Steam generation system	20
12.1 General.....	20
12.2 Steam generation equipment	20
13 Steam turbine system.....	21
13.1 Steam turbine	21
13.2 Live steam, reheat and bypass system.....	21
13.3 Feedwater system and pump	21
13.4 Deaerator and feedwater tank	22
13.5 Condensate system and condensate pump	22
13.6 Drain pumps of low pressure heater.....	23
13.7 Steam turbine cooling system	23
13.8 Auxiliary equipment cooling water system	24

13.9	Condenser and auxiliary facilities.....	25
13.10	Regenerative system	25
14	Layout of solar field	25
14.1	General layout of solar field	25
14.2	Layout of collectors and HTF pipelines	26
14.3	Wind and sand protection	26
15	Layout of power block.....	26
15.1	General.....	26
15.2	Layout of heat transfer facilities	28
15.3	Layout of thermal storage facilities.....	29
15.4	Layout of steam generation facilities	29
15.5	Layout of steam turbine hall and central control building	29
15.6	Layout of auxiliary fuel facilities	30
15.7	Maintenance facilities	31
16	Electrical equipment and system	31
16.1	Generator and main transformer	31
16.2	Main wiring	32
16.3	AC auxiliary power system.....	32
16.4	High-voltage distribution devices	32
16.5	DC system	32
16.6	Electrical monitoring and control.....	32
16.7	Relay protection and safety automation devices.....	33
16.8	Lighting system.....	33
16.9	Cable selection and cable laying.....	33
16.10	Overvoltage protection and grounding system.....	33
17	Water treatment system.....	33

INTERNATIONAL ELECTROTECHNICAL COMMISSION

SOLAR THERMAL ELECTRIC PLANTS –**Part 3-1: Systems and components – General requirements for the design of parabolic-trough solar thermal power plants**

FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

IEC 62862-3-1 has been prepared by IEC technical committee 117: Solar thermal electric plants. It is an International Standard.

The text of this International Standard is based on the following documents:

Draft	Report on voting
117/153/FDIS	117/158/RVD

Full information on the voting for its approval can be found in the report on voting indicated in the above table.

The language used for the development of this International Standard is English.

This document was drafted in accordance with ISO/IEC Directives, Part 2, and developed in accordance with ISO/IEC Directives, Part 1 and ISO/IEC Directives, IEC Supplement, available at www.iec.ch/members_experts/refdocs. The main document types developed by IEC are described in greater detail at www.iec.ch/standardsdev/publications.

A list of all parts in the IEC 62862 series, published under the general title *Solar thermal electric plants*, can be found on the IEC website.

The committee has decided that the contents of this document will remain unchanged until the stability date indicated on the IEC website under webstore.iec.ch in the data related to the specific document. At this date, the document will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

SOLAR THERMAL ELECTRIC PLANTS –

Part 3-1: Systems and components – General requirements for the design of parabolic-trough solar thermal power plants

1 Scope

This part of IEC 62862 specifies the general requirements for the design of parabolic-trough solar thermal power plants. It includes requirements for the electric power system, solar resource assessment, site selection, overall planning, collector system, heat transfer system, thermal energy storage system, steam generation system, steam turbine system, layout of solar field, layout of power block, electrical equipment and system, water treatment system, instrumentation and control, auxiliary system and ancillary facilities, as well as considerations concerning health and safety.

This document is applicable to the design of new, expanded or rebuilt parabolic-trough solar thermal power plants using a steam turbine.

2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

IEC 60076-2, *Power transformers – Part 2: Temperature rise for liquid-immersed transformers*
