1 Scope.....	6
2 Normative references.....	6
3 Terms, definitions and abbreviations .....	6
3.1 Terms and definitions .....	6
3.2 Abbreviations .....	6
4 Standard measuring conditions .....	7
4.1 General.....	7
4.2 Standard measuring environmental conditions .....	7
4.3 Measurement coordinate system .....	7
4.4 Darkroom conditions .....	8
4.5 Standard conditions of measuring equipment.....	8
4.5.1 General .....	8
4.5.2 Adjustment of LDD .....	9
4.5.3 Conditions of measuring equipment.....	9
4.6 Screen conditions .....	10
4.6.1 General .....	10
4.6.2 Report .....	10
5 Measuring methods of speckle contrast.....	10
5.1 Speckle contrast measurement of still image.....	10
5.1.1 Purpose .....	10
5.1.2 Measuring conditions .....	10
5.1.3 Measuring the monochromatic speckle contrast of front projection .....	10
5.1.4 Measuring the monochromatic speckle contrast of rear projection .....	12
5.2 Calibration and diagnosis of the LMD.....	12
5.2.1 General .....	12
5.2.2 Calibration procedure and diagnosis for the highest $C_S$ .....	13
5.2.3 Calibration procedure and diagnosis for the lowest $C_S$ .....	13
Annex A (informative) Spectral behaviour of the LD .....	15
A.1 Spectral behaviour of a single-longitudinal mode LD .....	15
A.2 Spectral behaviour of a multi-longitudinal mode LD .....	15
Annex B (informative) Recommendation on imaging sensor pixel size .....	16
Annex C (informative) Fundamental formulation of speckle contrast and the effects of measurement variables.....	18
C.1 Fundamental formulation .....	18
C.2 Effect of observation distance and iris radius .....	18
Annex D (informative) Possible errors and their sources .....	20
Bibliography .....	21
Figure 1 – Coordinate system for projection direction and viewing direction.....	8
Figure 2 – Example of measurement geometries for monochromatic speckle contrast of front projection.....	11

## INTERNATIONAL ELECTROTECHNICAL COMMISSION

## LASER DISPLAY DEVICES –

## Part 5-2: Optical measuring methods of speckle contrast

## FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as “IEC Publication(s)”). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

International Standard IEC 62906-5-2 has been prepared by IEC technical committee 110: Electronic display devices.

The text of this standard is based on the following documents:

FDIS	Report on voting
110/760/FDIS	110/768/RVD

Full information on the voting for the approval of this standard can be found in the report on voting indicated in the above table.

This publication has been drafted in accordance with the ISO/IEC Directives, Part 2.

A list of all parts in the IEC 62906 series, published under the general title *Laser display devices*, can be found on the IEC website.

The committee has decided that the contents of this publication will remain unchanged until the stability date indicated on the IEC website under "<http://webstore.iec.ch>" in the data related to the specific publication. At this date, the publication will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

A bilingual version of this publication may be issued at a later date.

**IMPORTANT – The “colour inside” logo on the cover page of this publication indicates that it contains colours which are considered to be useful for the correct understanding of its contents. Users should therefore print this publication using a colour printer.**

## **LASER DISPLAY DEVICES –**

### **Part 5-2: Optical measuring methods of speckle contrast**

#### **1 Scope**

This part of IEC 62906 specifies the standard measurement conditions and measurement methods for determining the monochromatic speckle contrast of laser display devices (LDDs). The LDDs may include hybrid types using both a laser or lasers, and spontaneous emission-based light sources, such as LEDs.

NOTE The monochromatic speckle contrast measurements do not include image quality issues.

#### **2 Normative references**

The following documents, in whole or in part, are normatively referenced in this document and are indispensable for its application. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

IEC 60825-1, *Safety of laser products – Part 1: Equipment classification and requirements*

IEC 62906-1-2:2015, *Laser display devices – Part 1-2: Vocabulary and letter symbols*
