CONTENTS

FOREWORD.....	4
1 Scope.....	6
2 Normative references	6
3 Terms, definitions, abbreviated terms and letter symbols.....	6
3.1 Terms and definitions.....	6
3.2 Abbreviated terms.....	7
3.3 Letter symbols	7
4 Standard measurement conditions.....	9
4.1 Environmental conditions	9
4.2 Dark room conditions	9
4.3 Warm-up time	9
4.4 Measurement coordinate systems.....	9
4.5 Standard conditions for the measuring equipment.....	10
4.5.1 General	10
4.5.2 Conditions of measuring equipment.....	11
4.5.3 Standard measurement locations.....	12
4.6 Test pattern	12
5 Measurement methods	13
5.1 Purpose	13
5.2 Equipment and conditions	13
5.3 Measurement procedure	13
5.4 Calculation.....	14
5.5 Report.....	14
Annex A (informative) Imaging and sampling conditions of sparkle pattern.....	15
A.1 Oversampling.....	15
A.2 Undersampling.....	16
Annex B (informative) Filtering methods for removing periodic modulations from the image	17
B.1 General.....	17
B.2 Filtering methods	18
B.2.1 Filtering in spatial domain.....	18
B.2.2 Filtering in frequency-domain.....	20
Annex C (informative) Hardware parameters that affect the sparkle contrast.....	21
C.1 LMD aperture setting	21
C.2 LMD focus	21
C.3 Condition to avoid aliasing	22
Annex D (informative) Sparkle contrast measurement with display mock-up	23
D.1 Display mock-up	23
D.2 Measurement.....	23
Annex E (informative) Calculation of sparkle contrast by the difference image method.....	25
E.1 Statistical background.....	25
E.2 Measurement procedure of the difference image method	25
E.3 Calculation of sparkle contrast by the difference image method	26
Annex F (informative) Calculation of sparkle contrast by the pixel power deviation method	27
F.1 Pixel power deviation description	27

F.2	Measurement procedure for the PPD method	27
Annex G (informative)	Elimination of low-frequency radiance variation from the sparkle pattern	29
G.1	General.....	29
G.2	Normalization of the local average radiance of segmented sparkle pattern.....	29
G.3	Calculating the mean or median value of the segmented sparkle pattern	30
Bibliography	31
Figure 1	– Cartesian coordinate system and spherical coordinate system for the specification of the viewer's gazing (viewing) direction.....	9
Figure 2	– Typical relative spectral response of a CCD detector array without IR-blocking filter (B/W camera) and a luminance meter with a sensitivity according to CIE $V(\lambda)$	11
Figure 3	– Measurement setup.....	13
Figure A.1	– Examples of sparkle image from the same DUT under different measurement distances	16
Figure B.1	– Display matrix element (grey square) in relation to the matrix of the imaging LMD detector elements (squares according to LMD pixel pitch) for the case of oversampling with an image sampling ratio of $R_S = 3,5$	18
Figure B.2	– Examples of sparkle patterns at $R_S = 4,3$ before applying an MWA filter (left) and after applying an MWA filter (right).....	19
Figure B.3	– Electronic images of the DUT (i.e., display matrix elements with AGL, left) and frequency components of that image used as basis for sparkle evaluation	20
Figure C.1	– Example of the variation of the MTF of the imaging LMD under different F -numbers as a function of spatial frequency of LMD pixels	21
Figure D.1	– Examples of display mock-ups.....	23
Figure D.2	– Example of measurement configuration	24
Figure G.1	– Example of the segmentation of the measurement field for the preparation of the elimination of the low-frequency radiance variations from the sparkle pattern.....	29
Table 1	– Letter symbols (quantity symbols and units)	7
Table 2	– Distinguishing types of DUT, imaging conditions, number of involved images and methods for suppression of display matrix modulations	10
Table B.1	– Filtering method capabilities for removing artifacts related to display matrix elements.....	17

INTERNATIONAL ELECTROTECHNICAL COMMISSION

ELECTRONIC DISPLAYS –**Part 3-9: Evaluation of optical performance –
Display sparkle contrast**

FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

IEC 62977-3-9 has been prepared by IEC technical committee 110: Electronic displays. It is an International Standard.

The text of this International Standard is based on the following documents:

Draft	Report on voting
110/1515/FDIS	110/1525/RVD

Full information on the voting for its approval can be found in the report on voting indicated in the above table.

The language used for the development of this International Standard is English.

This document was drafted in accordance with ISO/IEC Directives, Part 2, and developed in accordance with ISO/IEC Directives, Part 1 and ISO/IEC Directives, IEC Supplement, available at www.iec.ch/members_experts/refdocs. The main document types developed by IEC are described in greater detail at www.iec.ch/publications.

A list of all parts in the IEC 62977 series, under the general title *Electronic displays*, can be found on the IEC website.

The committee has decided that the contents of this document will remain unchanged until the stability date indicated on the IEC website under webstore.iec.ch in the data related to the specific document. At this date, the document will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

IMPORTANT – The "colour inside" logo on the cover page of this document indicates that it contains colours which are considered to be useful for the correct understanding of its contents. Users should therefore print this document using a colour printer.

ELECTRONIC DISPLAYS –

Part 3-9: Evaluation of optical performance – Display sparkle contrast

1 Scope

This part of IEC 62977 specifies standard measurement conditions and methods for determining the sparkle contrast of direct-view displays which comprise display matrix elements to render real 2D images on a flat panel and an anti-glare layer. This document excludes measurement of sparkle, which is intentionally obtained by the specular reflection from reflecting flakes in coatings and paints.
