CONTENTS

FOREWORD	4
1 Scope	6
2 Normative references	6
3 Terms, definitions, abbreviated terms and letter symbols	6
3.1 Terms and definitions	6
3.2 Abbreviated terms	7
3.3 Letter symbols (quantity symbols or unit symbols)	7
4 Standard measuring conditions	8
4.1 Standard environment conditions	8
4.2 Power supply	8
4.3 Warm-up time	8
4.4 Dark room condition	8
5 Measurement systems	8
5.1 Standard coordinate system	8
5.2 Measurement equipment	9
5.2.1 General	9
5.2.2 Light measuring device (LMD)	9
5.2.3 Stage conditions	9
5.2.4 Setup conditions	10
6 Background and see-through real scene conditions	10
6.1 General	10
6.2 Ambient background	11
6.3 Raster pattern (or grille pattern) targets	11
6.4 Crosshair pattern target	12
7 Test patterns of the virtual image	13
7.1 General	13
7.2 Checkerboard pattern	13
7.3 Solid colour patterns	13
7.4 Raster patterns	13
7.5 Measuring points	13
8 Measurement methods	13
8.1 Preparation	13
8.2 Luminous transmittance and spectral transmittance with an ambient diffuse illumination	14
8.2.1 General	14
8.2.2 Measuring conditions	14
8.2.3 Measuring procedures	14
8.2.4 Calculation	14
8.2.5 Report	16
8.3 Parameters related to virtual images	16
8.3.1 Ambient contrast ratio	16
8.3.2 Ambient chromaticity and chromaticity gamut area	18
8.3.3 Static image resolution	20
8.3.4 Secondary image effect	22
8.3.5 Flicker	24
8.4 Parameters related to see-through real scene	26

8.4.1	See-through FOV	26
8.4.2	Variations in luminance and chromaticity of see-through real scenes	29
8.4.3	Real rectangular scene distortion	32
8.4.4	Real local geometric distortion	34
8.4.5	Ratio of Michelson contrast of the real scene	36
8.4.6	Luminance ratio of virtual image versus background	37
8.4.7	Monocular positioning accuracy	38
Bibliography		41
Figure 1 – Spherical coordinate system		9
Figure 2 – Three-dimensional Cartesian coordinate system		9
Figure 3 – Example of the ambient background		11
Figure 4 – Example of the setting for a raster pattern target		12
Figure 5 – Example of the setting for a crosshair pattern target		12
Figure 6 – Variation of Michelson contrast (i.e. luminance modulation) with line width		21
Figure 7 – Example of a secondary image		23
Figure 8 – Temporal contrast sensitivity function		25
Figure 9 – Example of the see-through FOV		28
Figure 10 – Measuring points of the real scene (origin at the centre B_0 , corresponding to the optical axis of the DUT)		29
Figure 11 – Example of a real local geometric distortion		35
Figure 12 – Schematic diagram of the positioning measurement		39

INTERNATIONAL ELECTROTECHNICAL COMMISSION

EYEWEAR DISPLAY –

**Part 22-20: Specific measurement methods for AR type –
Image quality**

FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as “IEC Publication(s)”). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) IEC draws attention to the possibility that the implementation of this document may involve the use of (a) patent(s). IEC takes no position concerning the evidence, validity or applicability of any claimed patent rights in respect thereof. As of the date of publication of this document, IEC had not received notice of (a) patent(s), which may be required to implement this document. However, implementers are cautioned that this may not represent the latest information, which may be obtained from the patent database available at <https://patents.iec.ch>. IEC shall not be held responsible for identifying any or all such patent rights.

IEC 63145-22-20 has been prepared by IEC technical committee 110: Electronic displays. It is an International Standard.

The text of this International Standard is based on the following documents:

Draft	Report on voting
110/1580/FDIS	110/1599/RVD

Full information on the voting for its approval can be found in the report on voting indicated in the above table.

The language used for the development of this International Standard is English.

This document was drafted in accordance with ISO/IEC Directives, Part 2, and developed in accordance with ISO/IEC Directives, Part 1 and ISO/IEC Directives, IEC Supplement, available at www.iec.ch/members_experts/refdocs. The main document types developed by IEC are described in greater detail at www.iec.ch/publications.

A list of all parts in the IEC 63145 series, published under the general title *Eyewear display*, can be found on the IEC website.

The committee has decided that the contents of this document will remain unchanged until the stability date indicated on the IEC website under webstore.iec.ch in the data related to the specific document. At this date, the document will be

- reconfirmed,
- withdrawn, or
- revised.

IMPORTANT – The "colour inside" logo on the cover page of this document indicates that it contains colours which are considered to be useful for the correct understanding of its contents. Users should therefore print this document using a colour printer.

The content of the corrigendum 1 (2024-09) has been included in this copy.

EYEWEAR DISPLAY –

Part 22-20: Specific measurement methods for AR type – Image quality

1 Scope

This part of IEC 63145 specifies the standard measuring conditions and measurement methods for determining the image quality of augmented reality (AR) type eyewear displays. This document applies to see-through type (AR glasses) eyewear displays using virtual image optics.

Non see-through type displays (VR glasses), contact lens-type displays, and retina direct projection displays are out of the scope of this document.

2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.
