CONTENTS

FOREWORD.....	4
INTRODUCTION.....	6
1 Scope.....	7
2 Normative references	7
3 Terms and definitions	8
4 Cyclotron composition and operational conditions.....	9
4.1 Composition.....	9
4.2 Normal operating conditions.....	9
4.2.1 Environmental requirements	9
4.2.2 Electricity requirements	9
4.2.3 Compressed air	9
4.2.4 Nitrogen	9
4.2.5 Lightning and electric shock protection	10
4.2.6 Ion source media	10
5 Technical requirements	10
5.1 Warning signs	10
5.2 Performance index.....	10
5.3 Main subsystems performance index	10
5.3.1 Ion source	10
5.3.2 Radio frequency system	10
5.3.3 Vacuum system	10
5.3.4 Control system	11
5.3.5 Interlock system for radiation safety	11
5.3.6 Water cooling system	11
5.3.7 Stripping extraction efficiency.....	12
5.4 Electrical safety	12
5.4.1 Protective grounding.....	12
5.4.2 Insulation resistance.....	12
5.4.3 Dielectric strength.....	12
5.4.4 Touch current	12
5.5 Radiation safety.....	12
5.6 EMC	12
5.6.1 Surge immunity.....	12
5.6.2 EFT immunity	12
5.6.3 Emission.....	12
5.6.4 Immunity.....	13
5.7 Operation.....	13
6 Test methods.....	13
6.1 General requirements	13
6.1.1 Test environmental conditions	13
6.1.2 Test equipment.....	13
6.2 Warning signs check.....	13
6.3 Performance test	14
6.3.1 Beam nominal energy	14
6.3.2 Beam intensity.....	14
6.3.3 Beam spot size	14

6.3.4	Comprehensive beam efficiency	15
6.4	Main subsystem performance test.....	16
6.4.1	Ion source beam intensity.....	16
6.4.2	Radio frequency system	16
6.4.3	Vacuum system	17
6.4.4	Control system	17
6.4.5	Interlock system for radiation safety	17
6.4.6	Water cooling system	18
6.4.7	Stripping extraction efficiency	18
6.5	Electrical safety	18
6.5.1	Protective grounding.....	18
6.5.2	Insulation resistance.....	18
6.5.3	Dielectric strength.....	18
6.5.4	Touch current	18
6.6	Radiation safety	19
6.7	Operation test	19
7	Inspection rules	19
7.1	Summary	19
7.2	Inspection items.....	19
7.3	Criterion rule.....	20
8	Signage, packing, transportation, storage and accompanying documents	20
8.1	Signage	20
8.1.1	Cyclotron signs.....	20
8.1.2	Labels	20
8.2	Packing.....	20
8.3	Transportation	20
8.4	Storage.....	21
8.5	Accompanying documentation.....	21
8.5.1	Instructions.....	21
8.5.2	Supplier's declaration of conformity	21
8.5.3	Other documentation	21
Annex A (informative) Measurement of unloaded quality factor by the manufacturer		22
Annex B (informative) Magnetic field mapping		23
Figure 1 – Schematic diagram of beam spot diameter test		15
Figure 2 – Schematic diagram of beam spot diameter test result.....		15
Figure A.1 – Connection of resonant cavity and network analyzer.....		22
Figure A.2 – S_{21} curve measured with a network analyzer		22
Figure B.1 – Distribution of measuring points in the cyclotron central plane		24
Table 1 – Environmental conditions of the test.....		13

INTERNATIONAL ELECTROTECHNICAL COMMISSION

**FIXED ENERGY HIGH INTENSITY PROTON CYCLOTRON WITHIN
THE ENERGY RANGE OF 10 MeV TO LESS THAN 30 MeV**

FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

IEC 63175 has been prepared by IEC technical committee 45: Nuclear instrumentation. It is an International Standard.

The text of this International Standard is based on the following documents:

Draft	Report on voting
45/930/FDIS	45/932/RVD

Full information on the voting for its approval can be found in the report on voting indicated in the above table.

The language used for the development of this International Standard is English.

This document was drafted in accordance with ISO/IEC Directives, Part 2, and developed in accordance with ISO/IEC Directives, Part 1 and ISO/IEC Directives, IEC Supplement, available at www.iec.ch/members_experts/refdocs. The main document types developed by IEC are described in greater detail at www.iec.ch/standardsdev/publications.

The committee has decided that the contents of this document will remain unchanged until the stability date indicated on the IEC website under webstore.iec.ch in the data related to the specific document. At this date, the document will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

IMPORTANT – The "colour inside" logo on the cover page of this document indicates that it contains colours which are considered to be useful for the correct understanding of its contents. Users should therefore print this document using a colour printer.

INTRODUCTION

Particle accelerators have a wide application in the field of nuclear physics, radiation hardening, accelerator-driven energy system (nuclear reactor), and of course radioisotopes production, etc.. Proton cyclotron is one particular class of particle accelerators used for example for the acceleration of negative hydrogen ions.

This document specifies the performance and safety requirements, structure, technical requirements, test methods, identification, packing, transportation, storage and accompanying documents for proton cyclotrons.

Annex A and Annex B are both informative.

FIXED ENERGY HIGH INTENSITY PROTON CYCLOTRON WITHIN THE ENERGY RANGE OF 10 MeV TO LESS THAN 30 MeV

1 Scope

This document is applicable to hydrogen ion H⁺ acceleration proton cyclotrons with one or more fixed energies within the range of 10 MeV to less than 30 MeV and a beam intensity equal to or greater than 300 µA.

This document specifies the performance and safety requirements, structure, technical requirements, test methods, identification, packing, transportation, storage and accompanying documents for such cyclotrons.

This type of cyclotrons is intended for industrial use, including medical isotope and neutron production. Therapeutic medical applications are excluded from the scope of this document.

This document is intended for manufacturers of high intensity proton cyclotron within the energy range of 10 MeV to less than 30 MeV, and responsible organizations where such cyclotrons are installed.

2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.
