## CONTENTS

|   |    |
|---|----|
| FOREWORD.....   | 6  |
| INTRODUCTION.....   | 8  |
| 1 Scope.....  | 10 |
| 2 Normative references .....  | 10 |
| 3 Terms, definitions and abbreviated terms .....                                  | 10 |
| 3.1 Terms and definitions.....  | 10 |
| 3.2 Abbreviated terms.....  | 12 |
| 4 User stories of city information modelling in different application areas ..... | 12 |
| 4.1 General.....  | 12 |
| 4.2 New town planning.....  | 13 |
| 4.3 Three-dimensional visualization of property and land administration .....     | 14 |
| 4.4 Construction approval management .....  | 16 |
| 4.5 Project management during construction .....                                  | 18 |
| 4.6 Real estate registration management.....                                      | 18 |
| 4.7 City management using city brain .....  | 20 |
| 4.8 Heritage preservation and revitalization .....                                | 21 |
| 4.9 Transportation infrastructure planning.....                                   | 24 |
| 4.10 Traffic management.....  | 25 |
| 4.11 Water management.....  | 27 |
| 4.12 Smart census project .....   | 29 |
| 4.13 Urban underground pipeline management based on data lake .....               | 30 |
| 4.14 Emergency management and rescue .....  | 31 |
| 5 Use cases collection and database.....  | 32 |
| 5.1 General.....  | 32 |
| 5.2 New town planning.....  | 32 |
| 5.2.1 Use cases .....   | 32 |
| 5.2.2 Use case analysis.....  | 36 |
| 5.2.3 Requirements for the standards .....  | 37 |
| 5.2.4 Related documents .....   | 37 |
| 5.3 Three-dimensional visualization of property and land administration .....     | 37 |
| 5.3.1 Use cases .....   | 37 |
| 5.3.2 Use case analysis.....  | 39 |
| 5.3.3 Requirements for the standards .....  | 41 |
| 5.3.4 Related documents .....   | 42 |
| 5.4 Construction approval management.....   | 42 |
| 5.4.1 Use cases .....   | 42 |
| 5.4.2 Use case analysis.....  | 48 |
| 5.4.3 Requirements for the standards .....  | 50 |
| 5.4.4 Related documents .....   | 51 |
| 5.5 Project management during construction .....                                  | 51 |
| 5.5.1 Use cases .....   | 51 |
| 5.5.2 Use case analysis.....  | 53 |
| 5.5.3 Requirements for the standards .....  | 54 |
| 5.5.4 Related documents.....  | 54 |
| 5.6 Real estate registration management.....                                      | 54 |
| 5.6.1 Use cases .....   | 54 |

|        |   |     |
|--------|---|-----|
| 5.6.2  | Use case analysis.....  | 57  |
| 5.6.3  | Requirements for the standards.....   | 58  |
| 5.6.4  | Related documents.....  | 59  |
| 5.7    | City management using city brain.....   | 59  |
| 5.7.1  | Use cases.....  | 59  |
| 5.7.2  | Use case analysis.....  | 61  |
| 5.7.3  | Requirements for the standards.....   | 63  |
| 5.7.4  | Related documents.....  | 63  |
| 5.8    | Heritage preservation and revitalization.....                                 | 64  |
| 5.8.1  | Use cases.....  | 64  |
| 5.8.2  | Use case analysis.....  | 70  |
| 5.8.3  | Requirements for the standards.....   | 72  |
| 5.8.4  | Related documents.....  | 72  |
| 5.9    | Transportation infrastructure planning.....                                   | 73  |
| 5.9.1  | Use cases.....  | 73  |
| 5.9.2  | Use case analysis.....  | 75  |
| 5.9.3  | Requirements for the standards.....   | 76  |
| 5.9.4  | Related documents.....  | 76  |
| 5.10   | Traffic management.....   | 76  |
| 5.10.1 | Use cases.....  | 76  |
| 5.10.2 | Use case analysis.....  | 80  |
| 5.10.3 | Requirements for the standards.....   | 82  |
| 5.10.4 | Related documents.....  | 82  |
| 5.11   | Water management.....   | 82  |
| 5.11.1 | Use cases.....  | 82  |
| 5.11.2 | Use case analysis.....  | 88  |
| 5.11.3 | Requirements for the standards.....   | 89  |
| 5.11.4 | Related documents.....  | 89  |
| 5.12   | Smart census project.....   | 89  |
| 5.12.1 | Use cases.....  | 89  |
| 5.12.2 | Use case analysis.....  | 92  |
| 5.12.3 | Requirements for the standards.....   | 94  |
| 5.12.4 | Related documents.....  | 94  |
| 5.13   | Urban underground pipeline management based on data lake.....                 | 94  |
| 5.13.1 | Use cases.....  | 94  |
| 5.13.2 | Use case analysis.....  | 96  |
| 5.13.3 | Requirements for the standards.....   | 97  |

## INTERNATIONAL ELECTROTECHNICAL COMMISSION

---

**SMART CITY USE CASE COLLECTION AND  
ANALYSIS – CITY INFORMATION MODELLING –**
**Part 2: Use case analysis****FOREWORD**

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as “IEC Publication(s)”). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) IEC draws attention to the possibility that the implementation of this document may involve the use of (a) patent(s). IEC takes no position concerning the evidence, validity or applicability of any claimed patent rights in respect thereof. As of the date of publication of this document, IEC had not received notice of (a) patent(s), which may be required to implement this document. However, implementers are cautioned that this may not represent the latest information, which may be obtained from the patent database available at <https://patents.iec.ch>. IEC shall not be held responsible for identifying any or all such patent rights.

IEC SRD 63273-2 has been prepared by IEC systems committee Smart Cities: Electrotechnical aspects of Smart Cities. It is a Systems Reference Deliverable.

The text of this Systems Reference Deliverable is based on the following documents:

| Draft                  | Report on voting         |
|------------------------|--------------------------|
| SyCSmartCities/317/DTS | SyCSmartCities/329/RVDTS |

Full information on the voting for its approval can be found in the report on voting indicated in the above table.

The language used for the development of this Systems Reference Deliverable is English.

This document was drafted in accordance with ISO/IEC Directives, Part 2, and developed in accordance with ISO/IEC Directives, Part 1 and ISO/IEC Directives, IEC Supplement, available at [www.iec.ch/members\\_experts/refdocs](http://www.iec.ch/members_experts/refdocs). The main document types developed by IEC are described in greater detail at [www.iec.ch/publications](http://www.iec.ch/publications).

A list of all parts in the IEC SRD 63273 series, published under the general title *Smart city use case collection and analysis – City information modelling*, can be found on the IEC website.

The committee has decided that the contents of this document will remain unchanged until the stability date indicated on the IEC website under [webstore.iec.ch](http://webstore.iec.ch) in the data related to the specific document. At this date, the document will be

- reconfirmed,
- withdrawn, or
- revised.

**IMPORTANT – The "colour inside" logo on the cover page of this document indicates that it contains colours which are considered to be useful for the correct understanding of its contents. Users should therefore print this document using a colour printer.**

## INTRODUCTION

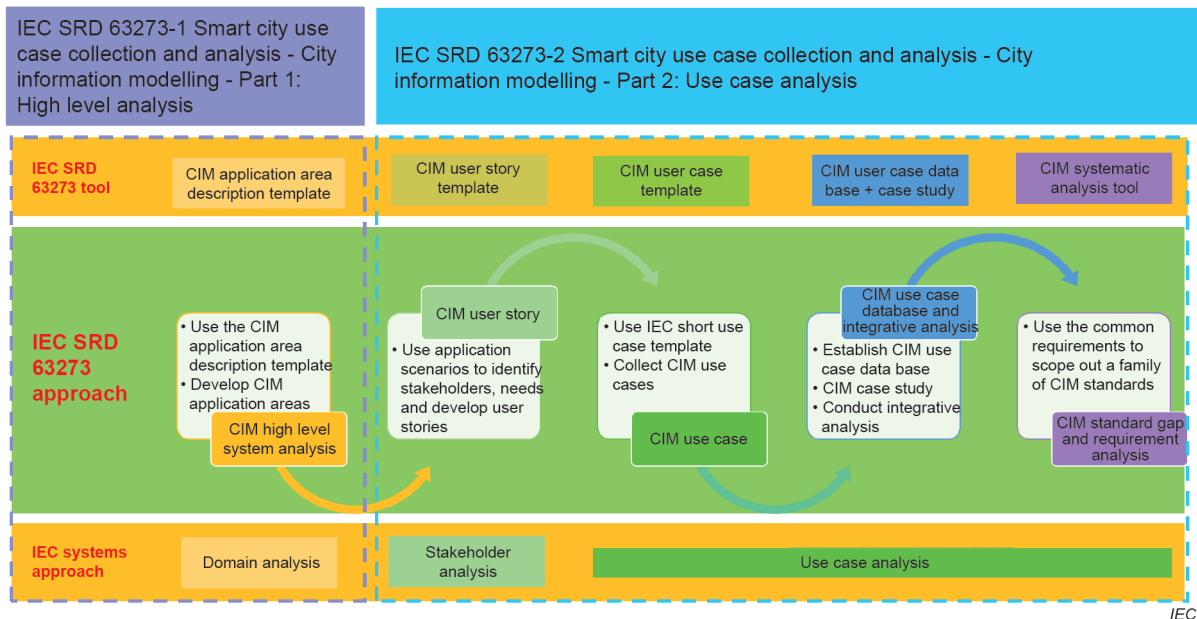

The IEC SRD 63273 series aims to scope out the requirements of city information modelling standards by collecting and analysing its use cases. Specifically, the IEC SRD 63273 series achieves the objectives of:

- a) identifying the key application areas and stakeholders;
- b) developing user stories and clarifying the relationship among these stakeholders;
- c) collecting and analysing use cases of city information modelling; and
- d) scoping out the requirements for city information modelling standards and providing recommendations to IEC regarding urban planning and management.

The IEC SRD 63273 series supports the overall scope of IEC systems committee Smart Cities by:

- a) promoting the collaboration and systems thinking regarding city information modelling standards;
- b) contributing multiple domain-specific use cases for smart cities; and
- c) supporting IEC in fostering the development of standards in the field of electrotechnology to help with the integration, interoperability, resiliency and effectiveness of city systems.

The IEC SRD 63273 series adopts a multi-step approach to generate and collect the use cases of city information modelling (see Figure 1).

**Figure 1 – City information modelling use case collection and analysis approach**

**Step I – High-level analysis:** The first step aims to generate the list of application areas of city information modelling for a high-level analysis. Needs statements, objectives, current practices, gaps, and scenarios (rationale for applying city information modelling in a specific application area) are investigated for the description of each application area. In addition, the ecosystem, which includes the list of stakeholders and the relationship among the stakeholders, is examined in each application area before developing user stories and use cases.

**Step II – User story:** The second step aims to develop a list of significant user stories based on the corresponding application area. In each corresponding area, one user story is generated for one specific stakeholder which has been identified in Step I. Each user story follows the same template, which includes one stakeholder (as a specific type of user), a specific situation (when), a goal (I want to), and a reason (so that).

**Step III – Use case:** The third step aims to develop use cases for a specific application area according to the list of user stories that have been generated in Step II. One user story in Step II can be expanded to be at least one use case. The organization of use cases follows the IEC short use case template (IEC TR 62559-1:2019, IEC 62559-2:2015 and IEC 62559-3:2017), which includes the name of the use case, scope, objective, narrative and list of actors.

**Step IV – Use case database establishment and integrative analysis:** This step is to establish the use case database of city information modelling and conduct integrative analysis of these use cases.

**Step V – City information modelling standard gaps and requirements:** This last step is to identify the standard gaps for city information modelling and requirements of the family of city information modelling standards.

The IEC SRD 63273 series contains two parts:

- IEC SRD 63273-1, Smart city use case collection and analysis – City information modelling – Part 1: High-level analysis
- IEC SRD 63273-2, Smart city use case collection and analysis – City information modelling – Part 2: Use case analysis

The scopes of the two parts are defined below.

Part 1 explains how the work of city information modelling use case collection and analyses address sustainable development goals, provides a brief overview of city information modelling, and identifies the key application areas and stakeholders of city information modelling.

Part 2 develops the list of user stories and the database of use cases, conducts integrative analyses of the use cases, scopes out the requirements of city information modelling standards and provides recommendations for IEC and other standards development organizations (SDOs) regarding urban planning and management.

In addition, according to the up-to-date understanding, urban digital twins are also used for describing such a type of solution for applying data and technology for better city planning and management. Urban digital twins indicate the digital twins at the urban scale to enable transformation in how cities are planned, built and managed to deliver better services to make the urban environment more liveable, inclusive, safe, resilient and sustainable. Therefore, the application areas, stakeholders, user stories and use cases of city information modelling, which are identified and developed in The IEC SRD 63273 series, are also applicable to urban digital twins to a great extent.

# **SMART CITY USE CASE COLLECTION AND ANALYSIS – CITY INFORMATION MODELLING –**

## **Part 2: Use case analysis**

### **1 Scope**

This part of IEC SRD 63273 develops the list of user stories and the database of use cases, conducts integrative analyses of the use cases, scopes out the requirements of city information modelling standards and provides recommendations for IEC and other standards development organizations (SDOs) regarding urban planning and management using city information modelling.

### **2 Normative references**

There are no normative references in this document.
