CONTENTS

FOREWORD	4
INTRODUCTION	6
1 Scope	7
2 Normative references	7
3 Terms and definitions	7
4 General appraisal	8
5 Acceptable provisions in standards related to regulatory legislation	8
6 History of IEC 61000-3-2 and its predecessors	9
6.1 History table	9
6.2 Before 1960	9
6.3 1960 to 1975	9
6.4 1975 to 1982	10
6.5 1982 to 1995	10
6.6 1995 to 2000	12
6.7 The “Millennium Amendment”	13
6.8 2000 to 2019	13
6.9 2020 to 2022	14
6.9.1 Impact factor approach	14
6.9.2 Effect of the coronavirus pandemic from 2020 to 2022	15
7 History of IEC 61000-3-12 and its predecessor	15
7.1 Origin	15
7.2 1989 to 1998	15
7.3 After 1998	16
8 History of IEC 61000-4-7 up to 2008	16
8.1 First edition in 1991	16
8.2 Second edition in 2002	16
8.3 Amendment 1 to the second edition	16
8.4 Developments since 2008	17
9 Economic considerations taken into account in setting limits in IEC 61000-3-2 before publication in 1995, and before the finalization of the text of the Millennium Amendment	17
Annex A (informative) Compatibility level and compensation factor	19
A.1 Explanation of the allocation of only part of the total compatibility level to the low-voltage network	19
A.2 Compensation factor	20
A.2.1 Maximum permissible current emission – original approach	20
A.2.2 Detailed consideration	21
A.2.3 New work prompted by the preparation of this document	23
Annex B (informative) Comparison of Class A limits and the harmonic spectra of phase-controlled dimmers of incandescent lamps at 90° firing angle	27
Annex C (informative) Comparison of Class C (IEC 61000-3-2:2018 and IEC 61000-3-2:2018/AMD1:2020, Table 2) limits and the harmonic spectrum of a discharge lamp with inductive ballast	28
Annex D (informative) Comparison of Class D limits and the harmonic spectra of capacitor-filtered single-phase rectifiers with 35° and 65° conduction angles	29

Annex E (informative) Economic considerations taken into account in setting limits, before finalization of the text of the Millennium Amendment to IEC 61000-3-2	30
Annex F (Informative) Concept plan for a full revision of IEC 61000-3-2.....	32
F.1 Rationale	32
F.2 Density	32
F.3 Usage factor	32
F.4 Contribution	32
F.5 Phase angle factor.....	32
F.6 System and site mitigation	33
F.7 Network factors.....	33
Annex G (informative) Histories of IEC 61000-3-2 and IEC 61000-3-12 and related standards.....	34
Bibliography.....	36
 Figure A.1 – Harmonic voltage drops and harmonic current injections in a typical system.....	 20
Figure A.2 – Permissible number of Class A loads versus harmonic order, with an additional 10 Ω load on the feeder	26
Figure B.1 – Comparison of Class A limits and spectra of dimmers	27
Figure C.1 – Comparison of Class C limits and the harmonic spectrum of a discharge lamp	28
Figure D.1 – Comparison of Class D limits and harmonic spectra of single-phase 230 W rectifiers with capacitor filters.....	29
Figure E.1 – Illustration of the concept of total aggregate cost trade-offs for meeting compatibility levels.....	31
 Table A.1 – Compensation factors $k_{p,h}$ considered valid in 1995 (IEC 61000-3-2:1995 [1] (first edition))	 21
Table A.2 – Sub-factors of $k_{p,h}$	22
Table A.3 – Compensated sharing factors.....	24
Table G.1 – Publication history of IEC 61000-3-2.....	34
Table G.2 – Publication history of IEC 61000-3-12.....	35
Table G.3 – Publication history of IEC 61000-4-7	35

INTERNATIONAL ELECTROTECHNICAL COMMISSION

ELECTROMAGNETIC COMPATIBILITY (EMC) –**Part 1-4: General – Historical rationale for the limitation
of power-frequency conducted harmonic current emissions
from equipment, in the frequency range up to 2 kHz**

FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as “IEC Publication(s)”). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

IEC TR 61000-1-4 has been prepared by subcommittee 77A: EMC – Low frequency phenomena, of IEC technical committee 77: Electromagnetic compatibility. It is a Technical Report.

This second edition cancels and replaces the first edition published in 2005. This edition constitutes a technical revision.

This edition includes the following significant technical changes with respect to the previous edition:

- a) relation between compatibility levels, emission limits and immunity requirements clarified;
- b) sharing of emission levels between LV, MV and HV clarified;
- c) new historical information added.

The text of this Technical Report is based on the following documents:

Draft	Report on voting
77A/1136/DTR	77A/1141/RVDTR

Full information on the voting for its approval can be found in the report on voting indicated in the above table.

The language used for the development of this Technical Report is English.

This document was drafted in accordance with ISO/IEC Directives, Part 2, and developed in accordance with ISO/IEC Directives, Part 1 and ISO/IEC Directives, IEC Supplement, available at www.iec.ch/members_experts/refdocs. The main document types developed by IEC are described in greater detail at www.iec.ch/publications.

A list of all parts in the IEC 61000 series, published under the general title *Electromagnetic compatibility (EMC)*, can be found on the IEC website.

The committee has decided that the contents of this document will remain unchanged until the stability date indicated on the IEC website under webstore.iec.ch in the data related to the specific document. At this date, the document will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

IMPORTANT – The "colour inside" logo on the cover page of this document indicates that it contains colours which are considered to be useful for the correct understanding of its contents. Users should therefore print this document using a colour printer.

INTRODUCTION

IEC 61000 is published in separate parts according to the following structure:

Part 1: General

General considerations (introduction, fundamental principles)

Definitions, terminology

Part 2: Environment

Description of the environment

Classification of the environment

Compatibility levels

Part 3: Limits

Emission limits

Immunity limits (in so far as they do not fall under the responsibility of product committees)

Part 4: Testing and measurement techniques

Measurement techniques

Testing techniques

Part 5: Installation and mitigation guidelines

Installation guidelines

Mitigation methods and devices

Part 6: Generic standards

Part 9: Miscellaneous

Each part is further subdivided into several parts published either as international standards or as technical specifications or technical reports, some of which have already been published as sections. Others will be published with the part number followed by a dash and a second number identifying the subdivision (example: IEC 61000-6-1).

IEC TR 61000-1-4:2005 (first edition) gave a historical rationale for the emission limits for equipment up to 2005. Since there is new historical material available about the developments in the past several years, SC77A is adding this new historical material as a revision of IEC TR 61000-1-4. The revision also clarifies and amends some existing statements that are now known not to report the history until 2005 correctly.

ELECTROMAGNETIC COMPATIBILITY (EMC) –

Part 1-4: General – Historical rationale for the limitation of power-frequency conducted harmonic current emissions from equipment, in the frequency range up to 2 kHz

1 Scope

This part of IEC 61000, which is a technical report, reviews the sources and effects of power frequency conducted harmonic current emissions in the frequency range up to 2 kHz on the public electricity supply, and gives an account of the reasoning and calculations leading to the existing emission limits for equipment in the editions of IEC 61000-3-2 [1]¹, up to and including the fifth edition (2018) with Amendment 1 (2020), and in the second edition of IEC 61000-3-12 (2011) [2].

The history is traced from the first supra-national standard on low-frequency conducted emissions into the public electricity supply, EN 50006:1975 [3] and its evolution through IEC (60)555-2 [4] to IEC 61000-3-2 [1], IEC TR 61000-3-4 [5] and IEC 61000-3-12 [2]. To give a full picture of the history, that of the standard for the measuring instrument IEC 61000-4-7 [6] is mentioned as well.

NOTE All IEC standards were renumbered starting from 60000 from 1998-01-01. To indicate the references of standards withdrawn before, or not reprinted after, that date, the “60x” prefix is here enclosed in parentheses. Hence “IEC (60)555-2”.

Some concepts in this document apply to all low voltage AC systems, but the numerical values apply specifically to the European 230 V/400 V 50 Hz system.

2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.
