CONTENTS

FOREWORD.....	4
INTRODUCTION.....	6
1 Scope.....	7
2 Normative references	7
3 Terms, definitions and abbreviated terms	7
3.1 Terms and definitions.....	7
3.2 Abbreviated terms.....	7
4 Holographic display technologies.....	8
4.1 General.....	8
4.2 Classification	10
4.3 Principles.....	10
4.3.1 Complex amplitude of three-dimensional image	10
4.3.2 Reconstruction of complex amplitude with an SLM.....	11
4.3.3 Spatial and temporal multiplexing of the SLM	11
4.3.4 Viewing-window-type holographic display	12
4.3.5 Holographic stereogram.....	13
5 Performance characteristics and specifications.....	13
5.1 General.....	13
5.2 Optical performance.....	13
5.2.1 Items related to effective resolution	13
5.2.2 Items related to speckle and other noise.....	14
5.2.3 Items related to distortion and chromatic aberration.....	15
5.2.4 Items related to angular viewing direction range and viewing window	15
5.2.5 Items related to image volume	15
5.2.6 Items related to chromaticity and luminance	16
Annex A (informative) Measurement of three-dimensional spot size, MTF and colour gamut	17
A.1 Three-dimensional spot size	17
A.2 MTF	18
A.3 Colour gamut	19
Bibliography.....	21
Figure 1 – Holographic stereogram (a) and holographic display in a strict sense (b)	9
Figure 2 – Holographic display classification.....	10
Figure 3 – Spatial and temporal multiplexing of SLM.....	12
Figure 4 – Viewing-window-type holographic display.....	12
Figure 5 – Spot size	14
Figure 6 – Speckle noise	14
Figure A.1 – Measurement equipment of the three-dimensional spot size	17
Figure A.2 – Measuring procedure of the three-dimensional spot size	17
Figure A.3 – Measuring setup and captured images.....	18
Figure A.4 – ROI extraction and rectification	18

Figure A.5 – Averaging of cross-sections to suppress speckle noise 19

Figure A.6 – Measured MTF..... 19

Figure A.7 – Measuring setup and colour test pattern 20

Figure A.8 – Measured colour gamut 20

INTERNATIONAL ELECTROTECHNICAL COMMISSION

3D DISPLAY DEVICES –

Part 41-1: Holographic display – General information

FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

The main task of IEC technical committees is to prepare International Standards. However, a technical committee may propose the publication of a technical report when it has collected data of a different kind from that which is normally published as an International Standard, for example "state of the art".

IEC TR 62629-41-1, which is a technical report, has been prepared by IEC technical committee 110: Electronic displays.

The text of this technical report is based on the following documents:

Draft TR	Report on voting
110/1019/DTR	110/1066/RVDTR

Full information on the voting for the approval of this International Standard can be found in the report on voting indicated in the above table.

This document has been drafted in accordance with the ISO/IEC Directives, Part 2.

A list of all parts in the IEC 62629 series, published under the general title *3D display devices*, can be found on the IEC website.

The committee has decided that the contents of this document will remain unchanged until the stability date indicated on the IEC website under "<http://webstore.iec.ch>" in the data related to the specific document. At this date, the document will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

A bilingual version of this publication may be issued at a later date.

IMPORTANT – The 'colour inside' logo on the cover page of this publication indicates that it contains colours which are considered to be useful for the correct understanding of its contents. Users should therefore print this document using a colour printer.

INTRODUCTION

This document is intended to gather technical information on holographic displays and to identify optical measurement items that would be required to characterize their performance.

3D DISPLAY DEVICES –

Part 41-1: Holographic display – General information

1 Scope

This part of IEC 62629 provides general information for the standardization of holographic displays.

2 Normative references

There are no normative references in this document.
