CONTENTS

FOREWORD.....	9
INTRODUCTION.....	11
1 Scope.....	12
2 Normative references	12
3 Terms and definitions	13
4 System characteristics.....	16
4.1 General.....	16
4.2 System information	16
4.3 Torque/speed considerations	16
4.3.1 General	16
4.3.2 Torque/speed capability.....	17
4.3.3 Electrical machine rating.....	18
4.3.4 Limiting factors on torque/speed capability	18
4.3.5 Safe operating speed, over-speed capability and over-speed test.....	19
4.3.6 Cooling arrangement	19
4.3.7 Voltage/frequency characteristics	20
4.3.8 Resonant speed bands	20
4.3.9 Duty cycles.....	21
4.4 Electrical machine requirements	21
5 Losses and their effects (for induction electrical machines fed from voltage source converters).....	24
5.1 General.....	24
5.2 Location of the additional losses due to converter supply and ways to reduce them	25
5.3 Converter features to reduce the electrical machine losses.....	26
5.3.1 Reduction of fundamental losses	26
5.3.2 Reduction of additional losses due to converter supply.....	26
5.4 Use of filters to reduce additional electrical machine losses due to converter supply.....	27
5.5 Temperature influence on life expectancy	27
5.6 Determination of electrical machine efficiency.....	28
6 Acoustic noise, vibration and torsional oscillation	28
6.1 Acoustic noise	28
6.1.1 General	28
6.1.2 Changes in noise emission due to changes in speed	28
6.1.3 Magnetically excited noise.....	29
6.1.4 Sound power level determination and limits	31
6.2 Vibration (excluding torsional oscillation)	31
6.2.1 General	31
6.2.2 Vibration level determination and limits.....	32
6.3 Torsional oscillation	32
7 Electrical machine insulation electrical stresses	33
7.1 General.....	33
7.2 Causes	33
7.3 Winding electrical stress	35
7.4 Limits and responsibility.....	36

7.4.1	Electrical machines design for low voltage ($\leq 1\,000\text{ V}$)	36
7.4.2	Electrical machines designed for medium and high voltage ($> 1\,000\text{ V}$)	37
7.5	Methods of reduction of voltage stress	37
7.6	Insulation stress limitation.....	38
8	Bearing currents	39
8.1	Sources of bearing currents in converter-fed electrical motors	39
8.1.1	General	39
8.1.2	Circulating currents due to magnetic asymmetry	39
8.1.3	Electrostatic build-up	39
8.1.4	High-frequency effects in converter operation	39
8.2	Generation of high-frequency bearing currents.....	41
8.2.1	Common mode voltage	41
8.2.2	Motor HF equivalent circuit and the resulting bearing current types	42
8.2.3	Circulating current	44
8.2.4	Rotor ground current	44
8.2.5	Electrostatic Discharge Machining (EDM) currents.....	45
8.3	Consequences of excessive bearing currents.....	46
8.4	Preventing high-frequency bearing current damage	50
8.4.1	Basic approaches	50
8.4.2	Other preventive measures.....	51
8.4.3	Other factors and features influencing the bearing currents	54
8.5	Additional considerations for electrical motors fed by high voltage source converters.....	54
8.5.1	General	54
8.5.2	Bearing protection of cage induction, brushless synchronous and permanent magnet electrical motors	54
8.5.3	Bearing protection for slip-ring electrical motors and for synchronous electrical motors with brush excitation	54
8.6	Bearing current protection for electrical motors fed by high-voltage current source converters	55
9	Installation.....	55
9.1	Earthing, bonding and cabling.....	55
9.1.1	General	55
9.1.2	Earthing.....	55
9.1.3	Bonding of electrical machines	55
9.1.4	Electrical machine power cables for high switching frequency converters	56
9.2	Reactors and filters.....	61
9.2.1	General	61
9.2.2	Output reactors.....	61
9.2.3	Voltage limiting filter (du/dt filter)	61
9.2.4	Sinusoidal filter.....	61
9.2.5	Electrical machine termination unit	61
9.3	Power factor correction	62
9.4	Integral electrical machines (integrated electrical machine and drive modules).....	63
10	Additional considerations for permanent magnet (PM) synchronous electrical machines fed by voltage source converters	63
10.1	System characteristics	63
10.2	Losses and their effects	63

10.3	Noise, vibration and torsional oscillation	64
10.4	Electrical machine insulation electrical stresses	64
10.5	Bearing currents	64
10.6	Particular aspects of permanent magnets	64
11	Additional considerations for cage induction electrical machines fed by high voltage source converters.....	64
11.1	General.....	64
11.2	System characteristics	65
11.3	Losses and their effects	66
11.3.1	Additional losses in the stator and rotor winding	66
11.3.2	Measurement of additional losses	66
11.4	Noise, vibration and torsional oscillation	66
11.5	Electrical machine insulation electrical stresses.....	67
11.5.1	General	67
11.5.2	Electrical machine terminal overvoltage.....	67
11.5.3	Stator winding voltage stresses in converter applications.....	67
11.6	Bearing currents	69
12	Additional considerations for synchronous electrical machines fed by voltage source converters	69
12.1	System characteristics	69
12.2	Losses and their effects	69
12.3	Noise, vibration and torsional oscillation	69
12.4	Electrical machine insulation electrical stresses.....	69
12.5	Bearing currents	70
13	Additional considerations for cage induction electrical machines fed by block-type current source converters	70
13.1	System characteristics (see Figure 35 and Figure 36).....	70
13.2	Losses and their effects	71
13.3	Noise, vibration and torsional oscillation	73
13.4	Electrical machine insulation electrical stresses.....	73
13.5	Bearing currents	73
13.6	Additional considerations for six-phase cage induction electrical machines.....	74
14	Additional considerations for synchronous electrical machines fed by LCI	74
14.1	System characteristics	74
14.2	Losses and their effects	75
14.3	Noise, vibration and torsional oscillation	75
14.4	Electrical machine insulation electrical stresses.....	75
14.5	Bearing currents	75
15	Additional considerations for cage induction electrical machines fed by pulsed current source converters (PWM CSI).....	76
15.1	System characteristics (see Figure 39)	76
15.2	Losses and their effects	77
15.3	Noise, vibration and torsional oscillation	77
15.4	Electrical machine insulation electrical stresses.....	77
15.5	Bearing currents	77
16	Wound rotor induction (asynchronous) electrical machines supplied by voltage source converters in the rotor circuit.....	77
16.1	System characteristics	77
16.2	Losses and their effects	77

16.3	Noise, vibration and torsional oscillation	78
16.4	Electrical machine insulation electrical stresses	78
16.5	Bearing currents	78
17	Other electrical machine/converter systems	78
17.1	Drives supplied by cyclo-converters	78
17.2	Wound rotor induction (asynchronous) electrical machines supplied by current source converters in the rotor circuit	80
18	Special consideration for standard fixed-speed induction electrical machines in the scope of IEC 60034-12 when fed from voltage source converter and motor requirements to be considered a converter capable motor	80
18.1	General	80
18.2	Torque derating during converter operation	82
18.2.1	General	82
18.2.2	Self-cooled motors	83
18.2.3	Non self-cooled motors	84
18.3	Losses and their effects	84
18.4	Noise, vibrations and torsional oscillation	84
18.5	Electrical machine insulation electrical stresses	84
18.5.1	General	84
18.5.2	Converter capable motor	85
18.6	Bearing currents in converter capable motors	85
18.7	Speed range mechanical limits	86
18.7.1	General	86
18.7.2	Maximum speed	86
18.7.3	Minimum speed	86
18.8	Overload torque capability	87
18.9	Excess overload current limits	87
18.9.1	General	87
18.9.2	Converter capable motor	87
18.10	Volts/Hz ratio and voltage boost	87
18.11	Resonance	87
18.12	Hazardous area operation	87
18.12.1	General	87
18.12.2	Converter capable motor	88
18.13	Unusual service conditions	89
18.13.1	Converter capable motors	89
18.13.2	Unusual converter-fed applications	89
19	Additional considerations for synchronous reluctance electrical machine fed by voltage source converters	89
19.1	System characteristics	89
19.2	Losses and their effects	89
19.3	Noise, vibration and torsional oscillation	89
19.4	Electrical machine insulation electrical stresses	89
19.5	Bearing currents	89
19.6	Particular aspects of synchronous reluctance electrical machines	90
Annex A (informative)	Converter characteristics	91
A.1	Converter control types	91
A.1.1	General	91
A.1.2	Converter type considerations	92

A.2	Converter output voltage generation (for voltage source converters)	92
A.2.1	Pulse width modulation (PWM)	92
A.2.2	Hysteresis (sliding mode)	93
A.2.3	Influence of switching frequency	93
A.2.4	Multi-level converters	94
A.2.5	Parallel converter operation	95
Annex B (informative)	Output characteristics of 2 level voltage source converter spectra	96
Annex C (informative)	Voltages to be expected at the power interface between converter and electrical machine	100
Annex D (informative)	Speed and harmonic capability of converter capable induction motor	104
D.1	General	104
D.2	Harmonic capability of converter capable motors	104
D.3	Speed capability and derating in variable torque application	105
D.4	Speed capability and derating in a constant torque application	105

INTERNATIONAL ELECTROTECHNICAL COMMISSION

ROTATING ELECTRICAL MACHINES –**Part 25: AC electrical machines used in power drive systems –
Application guide****FOREWORD**

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as “IEC Publication(s)”). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

IEC TS 60034-25 has been prepared by IEC technical committee 2: Rotating machinery. It is a Technical Specification.

This fourth edition of IEC TS 60034-25 cancels and replaces the third edition, published in 2014.

This edition includes the following significant technical changes with respect to the previous edition:

- a) The definitions of a converter capable motor and a converter duty motor are added.
- b) Clause 18 modified to include the performance expectations of a converter capable motor.
- c) Clause 8 modified to update shaft currents section.
- d) Annex D added to define the derating requirements.

The text of this Technical Specification is based on the following documents:

Draft	Report on voting
2/2067/DTS	2/2097/RVDTS

Full information on the voting for its approval can be found in the report on voting indicated in the above table.

The language used for the development of this Technical Specification is English.

This document was drafted in accordance with ISO/IEC Directives, Part 2, and developed in accordance with ISO/IEC Directives, Part 1 and ISO/IEC Directives, IEC Supplement, available at www.iec.ch/members_experts/refdocs. The main document types developed by IEC are described in greater detail at www.iec.ch/standardsdev/publications.

A list of all parts in the IEC 60034 series, published under the general title *Rotating electrical machines*, can be found on the IEC website.

The committee has decided that the contents of this document will remain unchanged until the stability date indicated on the IEC website under webstore.iec.ch in the data related to the specific document. At this date, the document will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

IMPORTANT – The 'colour inside' logo on the cover page of this publication indicates that it contains colours which are considered to be useful for the correct understanding of its contents. Users should therefore print this document using a colour printer.

INTRODUCTION

The performance characteristics and operating data for converter-fed electrical machines are influenced by the complete drive system, comprising supply system, converter, cabling, electrical machine, mechanical shafting and control equipment. Each of these components exists in numerous technical variants. Any values quoted in this document are thus indicative only.

In view of the complex technical interrelations within the system and the variety of operating conditions, it is beyond the scope and object of this document to specify numerical or limiting values for all the quantities which are of importance for the design of the power drive system.

To an increasing extent, it is the practice that power drive systems consist of components produced by different manufacturers. The object of this document is to explain, as far as possible, the influence of these components on the design of the electrical machine and its performance characteristics.

This document deals with both AC electrical machines which are specifically designed for converter supply and converter-fed electrical machines within the scope of IEC 60034-12, which are designed originally for mains supply.

ROTATING ELECTRICAL MACHINES –

Part 25: AC electrical machines used in power drive systems – Application guide

1 Scope

This part of IEC 60034 describes the performance characteristics of AC electrical machines for use on converter supplies. For electrical machines specifically designed for converter duty application design features are defined. It also specifies the interface parameters and interactions between the electrical machine and the converter including installation guidance as part of a power drive system, but except for the voltage at the power interface which is described in IEC TS 61800-8.

The general requirements of relevant parts of the IEC 60034 series of standards also apply to electrical machines within the scope of this document.

For electrical machines operating in potentially explosive atmospheres, additional requirements as described in the IEC 60079 series for dust ignition proof apply.

This document is not primarily concerned with safety. However, some of its recommendations may have implications for safety, which are considered as necessary.

Where a converter manufacturer provides specific installation recommendations, they take precedence over the recommendations of this document.

2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.
