CONTENTS

CONTENTS	2
FOREWORD	5
1 Scope	7
2 Normative references	7
3 Terms and definitions	8
4 Symbols, units and abbreviated terms	9
4.1 Symbols and units	9
4.2 Abbreviated terms	11
5 Overview	11
6 River current energy converter (REC) description	12
6.1 General	12
6.2 Operational parameters	12
7 Demonstrated performance	12
7.1 General	12
7.2 Site and test conditions	12
7.2.1 General	12
7.2.2 Bathymetry	13
7.2.3 Flow conditions	13
7.2.4 REC test site constraints	14
7.2.5 External constraints	15
7.3 Test equipment	15
7.3.1 Electric power measurement	15
7.3.2 River current measurement	16
7.3.3 Data acquisition	17
7.4 Measurement procedures	17
7.4.1 General	17
7.4.2 Operational status	17
7.4.3 Data collection	18
7.4.4 Instrument calibration	18
7.4.5 Data processing	18
7.4.6 Averaging	18
7.4.7 Test data properties	19
7.4.8 Electric power measurement	19
7.4.9 Incident resource measurement	20
7.5 Demonstrated performance at a tidal influenced river site	23
8 Tested performance	23
8.1 General	23
8.2 Towing tank tests	25
8.2.1 General	25
8.2.2 Test facility description	25
8.2.3 Test equipment	25
8.2.4 Measurement procedures	25
8.3 Push and pull tests	26
8.3.1 General	26
8.3.2 Test setup and site description	26
8.3.3 Test equipment	26

8.3.4	Measurement procedures	26
8.4	Flume tests	27
8.4.1	General	27
8.4.2	Test facility description	27
8.4.3	Test equipment	27
8.4.4	Measurement procedures	28
9	Derived results	29
9.1	General	29
9.2	Water density	29
9.3	Data processing	29
9.3.1	Filtering	29
9.3.2	Exclusion	29
9.3.3	Correction	29
9.4	Calculation of the power curve	30
9.4.1	General description of the method of bins	30
9.4.2	Detailed description of method of bins	32
9.4.3	Interpolation	36
9.4.4	Extrapolation	36
9.4.5	Uncertainty calculation	37
9.5	Mean river current speed shear profile	37
9.5.1	General	37
9.5.2	Current speed vertical shear profile	37
9.5.3	Current speed horizontal shear profile	38
9.6	RMS fluctuating river current speed	39
9.7	Current direction at centroid of projected capture area	40
9.8	Calculation of the REC overall efficiency	41
10	Test reporting	42
10.1	General	42
10.2	REC report	42
10.3	REC test site report	43
10.4	Electrical grid and load report	44
10.5	Test equipment report	45
10.6	Measurement procedure report	45
10.7	Tested performance report	45
10.8	Presentation of measured data	45
10.9	Presentation of the power curve	47
10.10	Presentation of the REC overall efficiency	49
10.11	Uncertainty assumptions	51
10.12	Deviations from the procedure	51
Annex A (normative)	Categories of error	52
Annex B (informative)	Combining demonstrated and tested performance data to create a single power curve	53
Bibliography	54
Figure 1	– Current profiler deployment position for placement A (plan view)	21
Figure 2	– Current profiler deployment position for placements A and B (placement A: profile view, placement B: plan view)	22
This wide device	has different lengths D_E and W	22

Figure 3 – Current profiler deployment position for placement C (plan view)	22
Figure 4 – Flume test equipment location.....	28
Figure 5 – Summary of the power curve calculation using the method of bins	31
Figure 6 – Vertical variation of river current speed across the projected capture area	32
Figure 7 – Horizontal variation of river current speed across the projected capture area	36
Figure 8 – Example circular histogram of river current direction	44
Figure 9 – Example figure showing channel cross-sectional area occupied by the REC on plane perpendicular to the principal flow direction (section view).....	44
Figure 10 – Example scatter plot of demonstrated performance data	46
Figure 11 – Example plot of the mean river current speed vertical shear profile	47

INTERNATIONAL ELECTROTECHNICAL COMMISSION

**MARINE ENERGY – WAVE, TIDAL AND
OTHER WATER CURRENT CONVERTERS –****Part 300: Electricity producing river energy converters –
Power performance assessment**

FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as “IEC Publication(s)”). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

The main task of IEC technical committees is to prepare International Standards. In exceptional circumstances, a technical committee may propose the publication of a Technical Specification when

- the required support cannot be obtained for the publication of an International Standard, despite repeated efforts, or
- the subject is still under technical development or where, for any other reason, there is the future but no immediate possibility of an agreement on an International Standard.

Technical Specification are subject to review within three years of publication to decide whether they can be transformed into International Standards.

IEC TS 62600-300, which is a Technical Specification, has been prepared by IEC technical committee 114: Marine energy - Wave, tidal and other water current converters.

The text of this Technical Specification is based on the following documents:

Draft TS	Report on voting
114/284/DTS	114/300/RVDTS 114/300A/RVDTS

Full information on the voting for the approval of this Technical Specification can be found in the report on voting indicated in the above table.

A list of all parts in the IEC 62600 series, published under the general title *Marine energy - Wave, tidal and other water current converters*, can be found on the IEC website.

This document has been drafted in accordance with the ISO/IEC Directives, Part 2.

The committee has decided that the contents of this document will remain unchanged until the stability date indicated on the IEC website under "<http://webstore.iec.ch>" in the data related to the specific document. At this date, the document will be

- transformed into an International standard,
- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

A bilingual version of this publication may be issued at a later date.

IMPORTANT – The 'colour inside' logo on the cover page of this publication indicates that it contains colours which are considered to be useful for the correct understanding of its contents. Users should therefore print this document using a colour printer.

MARINE ENERGY – WAVE, TIDAL AND OTHER WATER CURRENT CONVERTERS –

Part 300: Electricity producing river energy converters – Power performance assessment

1 Scope

This part of IEC 62600 provides:

- A systematic methodology for evaluating the power performance of river current energy converters (RECs) that produce electricity for utility scale and localized grids;
- A definition of river energy converter rated capacity and rated water speed;
- A methodology for the production of power curves for the river energy converters in consideration; and
- A framework for the reporting of results.

Exclusions from the scope of this document are as follows:

- RECs that provide forms of energy other than electrical energy unless the other form is an intermediary step that is converted into electricity by the river energy converter;
- Resource assessment, that will be addressed separately in the River Energy Resource Assessment Technical Specification;
- Scaling of any measured or derived results;
- Power quality issues;
- Any type of performance other than power and energy performance; and
- The combined effect of multiple river energy converter arrays.

2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.
