CONTENTS

FOREWORD.....	4
1 Scope.....	6
2 Normative references	6
3 Terms and definitions, abbreviated terms and symbols	6
3.1 Terms and definitions.....	6
3.2 Abbreviated terms and symbols	9
3.2.1 Abbreviated terms	9
3.2.2 Symbols	9
4 Requirements for distributed BESS.....	11
4.1 General.....	11
4.2 Connection scheme	11
4.3 Choice of switchgear.....	11
4.3.1 General	11
4.3.2 Interface switch	11
4.4 Normal operating range	11
4.4.1 General	11
4.4.2 Operating frequency range	11
4.4.3 Operating voltage range	12
4.5 Immunity to disturbances	12
4.5.1 General	12
4.5.2 Rate of change of frequency (ROCOF) immunity	12
4.5.3 Under voltage ride through (UVRT) requirements	12
4.5.4 Over voltage ride through (OVRT) requirements	12
4.5.5 Rapid phase angle change immunity.....	12
4.6 Active power response to frequency deviation.....	13
4.6.1 General	13
4.6.2 Active power response to over frequency.....	14
4.6.3 Active power response to underfrequency	14
4.7 Power response to voltage changes.....	15
4.7.1 General	15
4.7.2 Voltage support by reactive power	15
4.7.3 Reactive power control modes	15
4.7.4 Voltage related active power control	15
4.7.5 Voltage related reactive power response	16
4.7.6 Additional reactive current requirements on BESS	16
4.8 EMC and power quality	16
4.8.1 General	16
4.8.2 Direct current (DC) injection	16
4.9 Interface protection.....	17
4.9.1 General	17
4.9.2 Requirements on voltage and frequency protection.....	17
4.9.3 Means to detect islanding situation	17
4.9.4 Digital input to the interface protection.....	17
4.10 Connection and starting to generate electrical power	17
4.10.1 General	17
4.10.2 Connection of BESS	17
4.10.3 Auto reclose of distribution lines	17

- 4.10.4 Black start capability and intentional islanding control 17
- 4.11 Ceasing and reduction of active power on set point..... 17
- 4.12 Remote information exchange..... 17
 - 4.12.1 General 17
 - 4.12.2 Monitoring and control 18
 - 4.12.3 Communication..... 18
- 5 Conformance tests 18
- Annex A (normative) Operating frequency range 19
- Annex B (normative) Operating voltage range 20
- Annex C (normative) Summary of power thresholds to be defined by individual countries 21
- Bibliography..... 22

INTERNATIONAL ELECTROTECHNICAL COMMISSION

DISTRIBUTED ENERGY RESOURCES CONNECTION WITH THE GRID –**Part 3: Additional requirements for stationary
battery energy storage system**

FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) IEC draws attention to the possibility that the implementation of this document may involve the use of (a) patent(s). IEC takes no position concerning the evidence, validity or applicability of any claimed patent rights in respect thereof. As of the date of publication of this document, IEC had not received notice of (a) patent(s), which may be required to implement this document. However, implementers are cautioned that this may not represent the latest information, which may be obtained from the patent database available at <https://patents.iec.ch>. IEC shall not be held responsible for identifying any or all such patent rights.

IEC TS 62786-3 has been prepared by IEC Technical Committee 8: System aspects of electrical energy supply. It is a Technical Specification.

The text of this Technical Specification is based on the following documents:

Draft	Report on voting
8/1663/DTS	8/1680/RVDTS

Full information on the voting for its approval can be found in the report on voting indicated in the above table.

The language used for the development of this Technical Specification is English.

This document was drafted in accordance with ISO/IEC Directives, Part 2, and developed in accordance with ISO/IEC Directives, Part 1 and ISO/IEC Directives, IEC Supplement, available at www.iec.ch/members_experts/refdocs. The main document types developed by IEC are described in greater detail at www.iec.ch/publications.

A list of all parts in the IEC 62786 series, published under the general title *Distributed energy resources connection with the grid*, can be found on the IEC website.

The committee has decided that the contents of this document will remain unchanged until the stability date indicated on the IEC website under webstore.iec.ch in the data related to the specific document. At this date, the document will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

IMPORTANT – The "colour inside" logo on the cover page of this document indicates that it contains colours which are considered to be useful for the correct understanding of its contents. Users should therefore print this document using a colour printer.

DISTRIBUTED ENERGY RESOURCES CONNECTION WITH THE GRID –

Part 3: Additional requirements for stationary battery energy storage system

1 Scope

This part of IEC 62786, which is a Technical Specification, provides principles and technical requirements for interconnection of distributed Battery Energy Storage System (BESS) to the distribution network. It applies to the design, operation and testing of BESS interconnected to distribution networks. It includes the additional requirements for BESS, such as connection scheme, choice of switchgear, normal operating range, immunity to disturbance, active power response to frequency deviation, reactive power response to voltage variations and voltage changes, EMC and power quality, interface protection, connection and start to generate electric power, active power management, monitoring, control and communication, and grid-connected tests.

The stationary BESSs considered within the scope of this document include electrical forms such as lead-acid, lithium-ion, liquid flow and sodium-sulfur batteries, interconnected to medium voltage (MV) or low voltage (LV) distribution networks via bidirectional DC to AC power converters. This document will specify active and reactive power response and grid-connected testing for distributed BESS, as a supplement for IEC TS 62786-1:2023.

This document specifies interface requirements for connection of distributed BESS with the distribution network operating at a nominal frequency of 50 Hz or 60 Hz.

NOTE Mobile electrical energy storage devices (e.g., electrical vehicles) are under consideration for future editions.

2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

IEC TS 62786-1:2023, *Distributed energy resources connection with the grid – Part 1: General requirements*

IEC TS 62898-2: *Microgrids – Part 2: Guidelines for operation*
