CONTENTS

FOREWORD.....	5
INTRODUCTION.....	7
1 Scope.....	8
2 Normative references	8
3 Terms and definitions	8
4 Symbols and abbreviated terms.....	9
5 Thermal energy storage (TES) systems	10
5.1 Classification of TES systems	10
5.2 TES systems covered by this document.....	10
5.3 TES system limits	10
5.4 Key components	10
6 Instrumentation and measurement methods.....	11
6.1 General.....	11
6.2 Flow rate measurements.....	11
6.3 Temperature measurements	11
6.3.1 Heat transfer fluid temperatures	11
6.3.2 Wall temperatures	12
6.4 Level measurements.....	12
6.5 Meteorological signal measurements	12
6.5.1 Wind speed and direction	12
6.5.2 Ambient temperature	12
6.6 Data acquisition	13
7 General requirements on tests.....	13
7.1 General.....	13
7.2 Test procedure.....	13
7.2.1 General	13
7.2.2 Items to be included in the test procedure	14
7.2.3 Items to be agreed between the parties	14
7.3 Definition of the test included in this document	15
7.3.1 General	15
7.3.2 Test to determine the thermal efficiency of the storage system	15
7.3.3 Test to determine the heat capacity of the storage system.....	15
7.3.4 Test to determine the thermal losses of the storage system.....	16
7.3.5 Test to determine the global losses of the storage system	16
7.3.6 Test to determine the wall temperature	16
7.4 Test boundaries	17
8 Storage system characterization (storage thermal performance and capacity)	18
8.1 Thermal efficiency and storage capacity (storage thermal performance and capacity).....	18
8.1.1 Test methodology	18
8.1.2 Calculation procedure.....	19
8.2 Thermal losses of the storage system	23
8.2.1 Test methodology	23
8.2.2 Calculation procedure.....	23
8.3 Global energy losses of the storage system	24
8.3.1 General	24

8.3.2	Test methodology	24
8.3.3	Calculation procedure	25
9	Verification procedure	25
10	Test report (results)	27
Annex A (informative)	Thermal energy storage system types	28
A.1	Thermal energy storage modes	28
A.1.1	General	28
A.1.2	Sensible heat storage	28
A.1.3	Latent heat storage	28
A.1.4	Thermochemical energy storage	29
A.2	TES configuration	29
A.3	Circulation of the storage medium	29
Annex B (informative)	Description of the main components of the active direct/indirect TES using molten salts	31
B.1	Storage media	31
B.2	Tanks and foundation	31
B.2.1	Tanks	31
B.2.2	Foundations	32
B.2.3	Insulation	32
B.3	Materials	32
B.4	Piping	33
B.5	Pumps	33
B.6	Heat exchanger	33
B.7	Safety and control system	34
B.7.1	General	34
B.7.2	HTF and MSF leak detection system	34
B.7.3	Instrumentation	34
B.7.4	Freeze protection system	34
B.7.5	Molten salt valves	36
B.7.6	Blanketing system	36
B.7.7	Welding control system	36
B.8	Melting system	36
Annex C (normative)	Data acquisition and treatment	38
C.1	Flow signal measurement	38
C.2	Temperature signals measurement	41
Annex D (informative)	Documentation to be provided by the TES manufacturer/supplier	44
Annex E (normative)	Test report	46
Bibliography	48
Figure 1	– Agreed duration between two charges	16
Figure 2	– General typical diagram of the system and test boundaries for indirect TES systems	17
Figure 3	– General typical diagram of the system and test boundaries for direct TES systems	18
Figure 4	– Examples of criteria for comparison of the measurement (M) and the reference value (RV)	27

Table 1 – List of symbols and units	9
Table 2 – List of subscripts, superscripts and abbreviated terms.....	9
Table 3 – Levels of confidence and associated coverage factors (Gaussian distribution).....	26
Table C.1 – Critical range factor, $f(n_q)$, depending on the number of sensors, n_q , available	39
Table C.2 – Outline of the steps to be followed to calculate the representative flow rate (volumetric) for each time interval recorded	40
Table C.3 – Outline of steps to be followed to calculate the representative inlet heat transfer fluid temperature for each time interval recorded	43

SOLAR THERMAL ELECTRIC PLANTS –**Part 2-1: Thermal energy storage systems –
Characterization of active, sensible systems for
direct and indirect configurations**

FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as “IEC Publication(s)”). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

IEC TS 62862-2-1 has been prepared by IEC technical committee 117: Solar thermal electric plants. It is a Technical Specification.

The text of this Technical Specification is based on the following documents:

Draft TS	Report on voting
117/119/DTS	117/127/RVDTS

Full information on the voting for its approval can be found in the report on voting indicated in the above table.

The language used for the development of this Technical Specification is English.

This document was drafted in accordance with ISO/IEC Directives, Part 2, and developed in accordance with ISO/IEC Directives, Part 1 and ISO/IEC Directives, IEC Supplement, available at www.iec.ch/members_experts/refdocs. The main document types developed by IEC are described in greater detail at www.iec.ch/standardsdev/publications.

A list of all parts in the IEC 62862 series, published under the general title *Solar thermal electric plants*, can be found on the IEC website.

The committee has decided that the contents of this document will remain unchanged until the stability date indicated on the IEC website under "<http://webstore.iec.ch>" in the data related to the specific document. At this date, the document will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

IMPORTANT – The 'colour inside' logo on the cover page of this publication indicates that it contains colours which are considered to be useful for the correct understanding of its contents. Users should therefore print this document using a colour printer.

INTRODUCTION

IEC TC 117 prepares International Standards (and other types of documents) for systems of solar thermal electric (STE) plants for the conversion of solar thermal energy into electrical energy and for all the elements (including all sub-systems and components) in the entire STE energy system. These documents would cover all current different types of systems in the STE field, as follows:

- Parabolic trough
- Solar tower
- Linear fresnel collectors
- Parabolic dish
- Any other type of system using thermal storage that is not connected to the grid.

The documents define terminology, design and installation requirements, performance measurement techniques and test methods, safety requirements, and "power quality" issues for each of the above systems.

In addition to those systems, there are several major components that require standardization, such as the storage media (oil, molten salt, ceramic, concrete, etc.).

SOLAR THERMAL ELECTRIC PLANTS –

Part 2-1: Thermal energy storage systems – Characterization of active, sensible systems for direct and indirect configurations

1 Scope

This document defines the requirements and the test methods for the characterization of thermal energy storage (TES) systems.

This document contains the information necessary for determining the performance and functional characteristics of active direct and indirect thermal energy storage systems based on sensible heat in solar thermal power plants using parabolic-trough collector, Fresnel collector or tower central receiver technology with liquid storage media.

This document includes characterization procedures for testing energy storage system charge and discharge, as well as reporting the results. Test performance requirements are given and the instrumentation necessary for them, as well as data acquisition and processing methods and methods for calculating the results and their uncertainties.

2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

IEC TS 62862-1-1:2018, *Solar thermal electric plants – Part 1-1: Terminology*

IEC 60584-1:2013, *Thermocouples – Part 1: EMF specifications and tolerances*

IEC 60751:2008, *Industrial platinum resistance thermometers and platinum temperature sensors*

ISO 5725-3, *Accuracy (trueness and precision) of measurement methods and results – Part 3: Intermediate measures of the precision of a standard measurement method*

ISO 5725-6, *Accuracy (trueness and precision) of measurement methods and results – Part 6: Use in practice of accuracy values*
