Foreword

ISO (the International Organization for Standardization) and IEC (the International Electrotechnical Commission) form the specialized system for worldwide standardization. National bodies that are members of ISO or IEC participate in the development of International Standards through technical committees established by the respective organization to deal with particular fields of technical activity. ISO and IEC technical committees collaborate in fields of mutual interest. Other international organizations, governmental and non-governmental, in liaison with ISO and IEC, also take part in the work.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of document should be noted (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO and IEC shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents) or the IEC list of patent declarations received (see <http://patents.iec.ch>).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT) see www.iso.org/iso/foreword.html.

This document was prepared by INCITS (as INCITS 544-2018) and drafted in accordance with its editorial rules. It was assigned to Joint Technical Committee ISO/IEC JTC 1, *Information technology*, Subcommittee SC 25, *Interconnection of information technology equipment*, and adopted under the "fast-track procedure".

A list of all parts in the ISO/IEC 14165 series can be found on the ISO website.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at www.iso.org/members.html.

|--|-------------|
| 1 Scope | 1 |
| 2 Normative References | 2 |
| 2.1 Qualification and availability of references | 2 |
| 2.2 Approved References | 2 |
| 2.3 References Under Development | 3 |
| 3 Definitions and Conventions | 5 |
| 3.1 Overview | 5 |
| 3.2 Definitions | 5 |
| 3.3 Editorial Conventions | 8 |
| 3.3.1 English Usage Conventions | 8 |
| 3.3.2 FC Link Functions | 8 |
| 3.3.3 Bit Numbering | 8 |
| 3.3.4 Binary Notation | 9 |
| 3.3.5 Hexadecimal Notation | 9 |
| 3.4 Abbreviations, Acronyms, and Symbols | 9 |
| 3.5 Keywords | 11 |
| 4 Structure and Concepts | 13 |
| 4.1 Introduction | 13 |
| 4.2 FC-4 General Description | 13 |
| 4.3 FC-SB-6 General Description | 13 |
| 4.3.1 FC-SB-6 Instance | 13 |
| 4.3.2 FC-SB-6 Protocols | 13 |
| 4.4 Channel-Path Elements | 14 |
| 4.4.1 Overview of Channel-Path Elements | 14 |
| 4.4.2 Channel | 14 |
| 4.4.3 Channel Image | 14 |
| 4.4.4 Control Unit | 15 |
| 4.4.5 Control-Unit Image | 15 |
| 4.4.6 Link | 16 |
| 4.5 Channel-Path Configurations | 16 |
| 4.5.1 Channel-Path Configuration Overview | 16 |
| 4.5.2 Point-to-Point Configuration | 16 |
| 4.5.3 Fabric Configuration | 17 |
| 4.5.4 Physical Path | 19 |
| 4.5.5 Logical Path | 19 |
| 4.5.6 Channel-to-Channel Communication | 20 |
| 4.6 Information Transfer | 21 |
| 4.7 Protocols | 21 |
| 4.7.1 Protocol Overview | 21 |
| 4.7.2 Link Level Protocol | 21 |
| 4.7.3 Device Level Protocols | 22 |
| 4.7.4 Addressing | 22 |
| 5 FC-FS-4 Link Control | 25 |
| 5.1 FC-FS-4 Link Control Overview | 25 |
| 5.2 Class of Service | 25 |
| 5.3 Buffer-to-Buffer Credit Reclamation | 25 |
| 5.4 FC-SB-6 Sequences and Exchanges | 26 |
| 5.4.1 FC-SB-6 Sequences | 26 |

| | | |
|----------|--|-----------|
| 5.4.2 | FC-SB-6 Exchanges | 26 |
| 5.5 | FC Frame Header Fields | 28 |
| 5.5.1 | Frame Header Field Overview | 28 |
| 5.5.2 | R_CTL Field | 29 |
| 5.5.3 | D_ID and S_ID Fields | 29 |
| 5.5.4 | CS_CTL | 29 |
| 5.5.5 | TYPE Field | 30 |
| 5.5.6 | F_CTL Field | 30 |
| 5.5.7 | SEQ_ID | 30 |
| 5.5.8 | DF_CTL | 30 |
| 5.5.9 | SEQ_CNT | 30 |
| 5.5.10 | OX_ID | 30 |
| 5.5.11 | RX_ID | 30 |
| 5.5.12 | Parameter Field | 31 |
| 6 | Link-Level Functions | 33 |
| 6.1 | Link-Level Function Overview | 33 |
| 6.2 | FC-FS-4 Basic Link Services | 33 |
| 6.2.1 | Basic Link Services Overview | 33 |
| 6.2.2 | Abort Sequence | 33 |
| 6.3 | FC-LS-3 Extended Link Services | 33 |
| 6.3.1 | Extended Link-Services Overview | 33 |
| 6.3.2 | F_Port Login | 33 |
| 6.3.3 | N_Port Login | 33 |
| 6.3.4 | N_Port Logout | 34 |
| 6.3.5 | Reinstate Recovery Qualifier | 34 |
| 6.3.6 | Registered State Change Notification | 34 |
| 6.3.7 | State-Change Registration | 35 |
| 6.3.8 | Query Security Attributes | 36 |
| 6.3.9 | Request Node-Identification Data | 36 |
| 6.3.10 | Registered Link-Incident Record | 42 |
| 6.3.11 | Link-Incident-Record Registration | 46 |
| 6.3.12 | Read Link Error Status Block | 46 |
| 6.3.13 | Registered Fabric Change Notification | 46 |
| 6.3.14 | Process Login | 47 |
| 6.3.15 | Process Logout | 50 |
| 6.3.16 | Read Exchange Concise | 54 |
| 6.4 | FC-SB-6 Link-Control Functions | 54 |
| 6.4.1 | FC-SB-6 Link-Control Function Overview | 54 |
| 6.4.2 | Establish Logical Path | 57 |
| 6.4.3 | Remove Logical Path | 59 |
| 6.4.4 | Logical Path Established | 60 |
| 6.4.5 | Logical Path Removed | 60 |
| 6.4.6 | Link-Level Acknowledgment | 61 |
| 6.4.7 | Test Initialization | 62 |
| 6.4.8 | Test Initialization Result | 65 |
| 6.4.9 | Link-Level Reject | 69 |
| 6.4.10 | Link-Level Busy | 71 |
| 7 | N_Port Link Initialization | 73 |
| 7.1 | N_Port Link Initialization Overview | 73 |
| 7.2 | Link-Initialization Procedure | 74 |
| 7.3 | Initialization Process for a Channel | 75 |
| 7.3.1 | Channel Initialization Overview | 75 |

| | | |
|----------|---|-----------|
| 7.3.2 | Channel Login and Security Attribute Determination | 75 |
| 7.3.3 | Channel Node-Identifier Acquisition | 76 |
| 7.3.4 | Channel State-Change Registration | 78 |
| 7.3.5 | Channel Link-Incident-Record Registration | 78 |
| 7.3.6 | Process Login | 79 |
| 7.3.7 | Channel Logical-Path Establishment | 79 |
| 7.4 | Initialization Process for a Control Unit | 80 |
| 7.4.1 | Control Unit Initialization Overview | 80 |
| 7.4.2 | Control-Unit Login | 80 |
| 7.4.3 | Control Unit Node-Identifier Acquisition | 82 |
| 7.4.4 | Control Unit State-Change Registration | 83 |
| 7.4.5 | Process login | 83 |
| 7.4.6 | Control Unit Logical-Path Establishment | 83 |
| 8 | FC-SB-6 Information Units | 85 |
| 8.1 | FC-SB-6 Information Unit Overview | 85 |
| 8.2 | Rules for Sending FC-SB-6 IUs | 85 |
| 8.2.1 | Overview of Rules for Sending FC-SB-6 Information Units | 85 |
| 8.2.2 | Rules for Device-level Functions in Command Mode | 87 |
| 8.2.3 | Rules for Device-level Functions in Transport Mode | 88 |
| 8.3 | FC-SB-6 IU Structures | 89 |
| 8.4 | FC-SB-6 Header | 93 |
| 8.4.1 | FC-SB-6 Header Overview | 93 |
| 8.4.2 | FC-SB-6 Header Format | 93 |
| 8.4.3 | Channel Image ID | 93 |
| 8.4.4 | Control-Unit Image ID | 93 |
| 8.4.5 | Device Address | 94 |
| 8.5 | IU Header | 94 |
| 8.5.1 | IU Header Format | 94 |
| 8.5.2 | Information-Unit Identifier | 95 |
| 8.5.3 | Device-Header Flags | 96 |
| 8.5.4 | CCW Number | 99 |
| 8.5.5 | Token | 101 |
| 8.6 | Device Information Block (DIB) Structure | 101 |
| 8.6.1 | DIB Structure Overview | 101 |
| 8.6.2 | DIB Header | 102 |
| 8.6.3 | Longitudinal-Redundancy-Check Field | 103 |
| 8.6.4 | DIB Data Field | 103 |
| 8.6.5 | Cyclic-Redundancy-Check Field | 104 |
| 8.7 | Command DIB Structure | 106 |
| 8.7.1 | Command DIB Overview | 106 |
| 8.7.2 | Command Header | 106 |
| 8.8 | Command-Data DIB Structure | 113 |
| 8.9 | Data DIB Structure | 113 |
| 8.9.1 | Data DIB Overview | 113 |
| 8.9.2 | Data Header | 114 |
| 8.10 | Status DIB | 114 |
| 8.10.1 | Status DIB Processing | 114 |
| 8.10.2 | Status DIB Structure | 116 |
| 8.10.3 | Status Header | 117 |
| 8.10.4 | Supplemental Status Field | 130 |
| 8.11 | Control DIB Structure | 131 |
| 8.11.1 | Control DIB Structure Overview | 131 |
| 8.11.2 | Control Header | 131 |

| | | |
|----------|---|------------|
| 8.11.3 | Control Payload | 145 |
| 8.12 | Link-Control DIB Structure | 145 |
| 8.12.1 | Link-Control DIB Structure Overview | 145 |
| 8.12.2 | Link Header | 146 |
| 8.12.3 | Link Payload | 147 |
| 8.13 | Transport Command IU | 147 |
| 8.13.1 | Transport Command Overview | 147 |
| 8.13.2 | FC-SB-6 Header | 148 |
| 8.13.3 | Transport Command Header | 148 |
| 8.13.4 | Transport Command Area Header | 150 |
| 8.13.5 | Transport Command Area | 152 |
| 8.13.6 | Longitudinal Redundancy Check | 160 |
| 8.13.7 | Data Length | 161 |
| 8.13.8 | Bidirectional Read Data Length | 161 |
| 8.14 | Transport Data IU | 161 |
| 8.14.1 | Transport Data IU Overview | 161 |
| 8.14.2 | Transport Data | 162 |
| 8.14.3 | Pad Bytes | 162 |
| 8.14.4 | Cyclic-Redundancy-Check | 162 |
| 8.14.5 | CRC Generation and Checking | 163 |
| 8.15 | Transport Response IU | 163 |
| 8.15.1 | Transport Response IU Overview | 163 |
| 8.15.2 | Transport Response IU Structure | 164 |
| 8.15.3 | FC-SB-6 Header | 164 |

Foreword (This foreword is not part of American National Standard INCITS 544-2018.)

The Fibre Channel Single-Byte Command Code Sets - 6 (FC-SB-6) standard describes the Fibre Channel mapping protocol associated with the Single-Byte Command Code Sets.

This standard was developed by the INCITS Fibre Channel T11 Technical Committee (FC-TC) of Accredited Standards Committee during 2015-2016. The standards approval process started in 2016. This document includes annexes which are informative and are not considered part of the standard.

Requests for interpretation, suggestions for improvement or addenda, or defect reports are welcome. They should be sent to InterNational Committee for Information Technology Standards (INCITS), ITI, 1101 K Street, NW, Suite 610, Washington, DC 20005.

This standard was processed and approved for submittal to ANSI by INCITS. Committee approval of this standard does not necessarily imply that all committee members voted for its approval. At the time it approved this standard, INCITS had the following members:

Laura Lindsay, Chair
Donald Deutsch, Vice-Chair

Introduction

FC-SB-6 describes the Fibre Channel protocol mapping for the Single-Byte Command Code Sets. FC-SB-6 is one of a number of Fibre Channel protocol mappings, referred to as FC-4s.

Fibre Channel – Single-Byte Command Code Sets Mapping Protocol - 6 (FC-SB-6)

1 Scope

This standard describes a communication interface between a channel and I/O control units that utilize the Single-Byte Command Code Sets (SBCCS) as implemented in a wide range of data processing systems. It employs information formats and signaling protocols that provide a uniform means for communicating with various types of I/O control units, facilitating a high bandwidth, high performance, and long distance information exchange environment. The signaling protocols and information exchanges are defined at a layer (FC-4) to compatibly utilize the link services and other functions provided by the INCITS Fibre Channel Framing and Signaling (FC-FS-4) and the INCITS Fibre Channel Link Services (FC-LS-3) specifications. This FC-4 Upper Level Protocol is referred to as the Fibre Channel-Single-Byte-6 Command Code Sets Mapping Protocol (FC-SB-6).

This standard modifies the FC-SB-5 standard to specify enhancements and clarifications to the command-mode and transport-mode protocols to increase the efficiency and expand the capabilities of operations.

INCITS 544-2018

2 Normative References

2.1 Qualification and availability of references

The references listed in this clause contain provisions that, through reference in this text, constitute provisions of this document. At the time of publication, the editions indicated were valid. All standards are subject to revision, and parties to agreements based on this standard are encouraged to investigate the possibility of applying the most recent editions of the standards listed in this clause.

Orders for ISO Standards and ISO publications should normally be addressed to the ISO member in your country. If that is impractical, ISO Standards and ISO publications may be ordered from ISO Central Secretariat (ISO/CS):

Phone: +41 22 749 01 11
Fax: +41 22 749 09 47
E-mail: customerservice@iso.org
Post: ISO, 8, chemin de Blandonnet,
CP 401 - 1214 Vernier, Geneva - Switzerland

In order to avoid delivery errors, it is important that you accurately quote the standard's reference number given in the ISO catalogue. For standards published in several parts, you should specify the number(s) of the required part(s). If not, all parts of the standard will be provided.

Copies of the following documents may be obtained from ANSI, an ISO member organization:

Approved ANSI standards;
approved international and regional standards (ISO and IEC); and
approved foreign standards (including JIS and DIN).
