CONTENTS

FOREWORD.....	4
INTRODUCTION.....	5
1 Scope.....	7
2 Normative references	7
3 Terms, definitions and abbreviated terms	8
3.1 Terms and definitions.....	8
3.2 Abbreviated terms.....	10
4 Conformance.....	11
5 IGRS RA overview.....	11
6 IGRS RA service functional flow	11
7 Registration management.....	13
7.1 User or device registration flow.....	13
7.2 User registration management	14
7.3 Device registration management.....	14
7.4 Registration response status code	15
8 Login.....	15
8.1 User or device login flow.....	15
8.2 User connection.....	16
8.3 Messages for user connection ID binding.....	16
8.4 Device connection.....	17
8.5 Messages for device connection ID binding.....	17
9 Device access rights configuration.....	18
9.1 Overview.....	18
9.2 Messages for device access rights configuration request.....	18
9.3 Messages for device access rights configuration response	19
10 User and device relationship management.....	20
10.1 Overview.....	20
10.2 Relationship management mechanism	23
10.3 Relationship establishment	24
10.3.1 Messages for relationship establishment request.....	24
10.3.2 Relationship establishment request procedure for IRSP.....	24
10.3.3 Target accepts or rejects relationship establishment request	25
10.3.4 IRSP processes relationship establishment acceptance message from target.....	26
10.4 Releasing relationship.....	27
10.5 Device verification code management	28
10.5.1 Device verification code management initiated by IGRS RA user	28
10.5.2 Device verification code management initiated by IGRS RA device.....	29
11 Message exchange.....	30
11.1 Overview.....	30
11.2 User or device ↔ User or device message exchange that needs response	30
11.3 User or device ↔ User or device message exchange that does not need response.....	31
11.4 User or device ↔ IRSP message exchange	32
11.5 IGRS RA server pushes message to user or device	32
11.6 IGRS RA NAT traversal.....	33

11.7	Message exchange mode	34
11.7.1	Overview	34
11.7.2	Message exchange of “point-to-point” and “point-to- multiple-point”	35
11.7.3	Message exchange of “instant transmission” and “offline storage”	35
12	Logout	35
13	User and device discovery and online status management	36
14	Security	38
	Bibliography	39
	Figure 1 – Typical flow of IGRS RA service	12
	Figure 2 – IGRS RA user or device registration flow	13
	Figure 3 – IGRS RA User or Device Login Flow	16
	Figure 4 – Flow of relationship establishment request which needs approval from target	20
	Figure 5 – Flow of relationship establishment request which does not need approval from target	20
	Figure 6 – IGRS RA Relationships	22
	Figure 7 – Flow of relationship releasing	27
	Figure 8 – Flow of message exchange between user or device and user or device that needs response	30
	Figure 9 – Flow of message exchange between user or device and user or device that does not need response	31
	Figure 10 – Flow of message exchange between user or device and IRSP	32
	Figure 11 – IRSP pushes message to user or device	33
	Figure 12 – IGRS RA NAT traversal mechanism	34
	Figure 13 – Point-to-point message exchange in IGRS RA system	35

INFORMATION TECHNOLOGY – HOME ELECTRONIC SYSTEM (HES) ARCHITECTURE –

Part 5-8: Intelligent grouping and resource sharing for HES Class 2 and Class 3 – Remote access core protocol

FOREWORD

- 1) ISO (the International Organization for Standardization) and IEC (the International Electrotechnical Commission) form the specialized system for worldwide standardization. National bodies that are members of ISO or IEC participate in the development of International Standards through technical committees established by the respective organization to deal with particular fields of technical activity. ISO and IEC technical committees collaborate in fields of mutual interest. Other international organizations, governmental and non-governmental, in liaison with ISO and IEC, also take part in the work. In the field of information technology, ISO and IEC have established a joint technical committee, ISO/IEC JTC 1.
- 2) The formal decisions or agreements of IEC and ISO on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees and ISO member bodies.
- 3) IEC, ISO and ISO/IEC publications have the form of recommendations for international use and are accepted by IEC National Committees and ISO member bodies in that sense. While all reasonable efforts are made to ensure that the technical content of IEC, ISO and ISO/IEC publications is accurate, IEC or ISO cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees and ISO member bodies undertake to apply IEC, ISO and ISO/IEC publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any ISO, IEC or ISO/IEC publication and the corresponding national or regional publication should be clearly indicated in the latter.
- 5) ISO and IEC do not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. ISO or IEC are not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or ISO or its directors, employees, servants or agents including individual experts and members of their technical committees and IEC National Committees or ISO member bodies for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication of, use of, or reliance upon, this ISO/IEC publication or any other IEC, ISO or ISO/IEC publications.
- 8) Attention is drawn to the normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this ISO/IEC publication may be the subject of patent rights. ISO and IEC shall not be held responsible for identifying any or all such patent rights.

International Standard ISO/IEC 14543-5-8 was prepared by subcommittee 25: Interconnection of information technology equipment, of ISO/IEC joint technical committee 1: Information technology.

The list of all currently available parts of the ISO/IEC 14543 series, under the general title *Information technology – Home electronic system (HES) architecture*, can be found on the IEC and ISO websites.

This International Standard has been approved by vote of the member bodies, and the voting results may be obtained from the address given on the second title page.

This publication has been drafted in accordance with the ISO/IEC Directives, Part 2.

A bilingual version of this publication may be issued at a later date.

IMPORTANT – The 'colour inside' logo on the cover page of this publication indicates that it contains colours which are considered to be useful for the correct understanding of its contents. Users should therefore print this document using a colour printer.

INTRODUCTION

The ISO/IEC 14543-5 series of standards specifies the services and protocol of the application layer for Intelligent Grouping and Resource Sharing (IGRS) devices and services in the Home Electronic System. Some parts reference Classes 1, 2 and 3, which are HES designations specified in the HES architecture standard, ISO/IEC 14543-2-1.

The ISO/IEC 14543-5 series includes the following parts.

- Part 5-1: Core protocol
 - Specifies the TCP/IP protocol stack as the basis and the HTTP protocol as the message-exchange framework among devices.
 - Specifies a series of device and service interaction/invocation standards, including device and service discovery protocol, device and service description, service invocation, security mechanisms, etc.
 - Specifies core protocols for a type of home network that supports streaming media and other high-speed data transports within a home.
- Parts 5-2#: Application profile
 - Based on the IGRS core protocol.
 - Specifies a device and service interaction mechanism, as well as application interfaces used in IGRS basic applications.
 - Multiple application profiles are specified, including:
 - Part 5-21: AV profile
 - Part 5-22: File profile
- Part 5-3: Basic application
 - Includes an IGRS basic application list.
 - Specifies a basic application framework.
 - Specifies operation details (device grouping, service description template, etc.), function definitions and service invocation interfaces.
- Part 5-4: Device validation
 - Defines a standard method to validate an IGRS-compliant device.
- Part 5-5: Device type
 - Specifies IGRS device types used in IGRS applications.
- Part 5-6: Service type
 - Specifies basic service types used in IGRS applications.
- Part 5-7: Remote access system architecture
 - Specifies the architecture and framework for the remote access of IGRS devices and services in the Home Electronic System. The remote access communications protocol and application profiles are specified in the following parts of ISO/IEC 14543-5:
 - ISO/IEC 14543-5-8: Remote access core protocol
 - ISO/IEC 14543-5-9: Remote access service platform
 - ISO/IEC 14543-5-101: Remote AV access profile
 - ISO/IEC 14543-5-102: Remote universal management profile
 - ISO/IEC 14543-5-11: Remote user interface
 - ISO/IEC 14543-5-12: Remote access test and verification
 - The relationships among these parts are specified in Part 5-7.

- Part 5-8: Remote access core protocol
 - Provides detailed system components, system function modules, basic concepts of IGRS remote access elements and their relationships, message exchange mechanisms and security related specifications.
 - Specifies interfaces between IGRS Remote Access (RA) client and service platforms. Defines co-operative procedures among IGRS RA clients.
- Part 5-9: Remote access service platform
 - Specifies the IGRS RA service platform (IRSP) architectures and interfaces among servers in the service platforms.
 - Based on Part 5-8: Remote access core protocol.
- Parts 5-10#: Remote access application profiles
 - Defines a device and service interaction mechanism for various applications.
 - Based on Part 5-8: Remote access core protocol.
 - Two profiles are under development:
 - Part 5-101: Remote AV access profile.¹ This part defines the common requirements for IGRS RA AV users and devices in IGRS networks.
 - Part 5-102: Remote universal management profile.² This part specifies a mechanism for integrating devices with both relatively high and low processing capabilities into IGRS networks. It also specifies universal remote device discovery and a management framework.
 - Additional application profiles will be specified in the future.
- Part 5-11: Remote user interface³
 - Specifies adaptive user interface generation and remote device control mechanisms suitable for different remote access applications and devices.
- Part 5-12: Remote access test and verification⁴
 - Defines a standard method to test and verify IGRS-RA compliant device and service interfaces.

² Under preparation. Stage at the time of publication: ISO/IEC CD 14543-5-102:2016.

³ Under preparation. Stage at the time of publication: ISO/IEC DIS 14543-5-11:2017.

⁴ Under preparation. Stage at the time of publication: ISO/IEC DIS 14543-5-12:2017.

INFORMATION TECHNOLOGY – HOME ELECTRONIC SYSTEM (HES) ARCHITECTURE –

Part 5-8: Intelligent grouping and resource sharing for HES Class 2 and Class 3 – Remote access core protocol

1 Scope

This part of ISO/IEC 14543-5 specifies the core protocol of IGRS user and device remote access, including intelligent grouping and resource sharing. The protocol features are:

- a) IGRS RA user and IGRS RA device concepts and relationship management mechanisms,
- b) user and device remote discovery and online and offline status management mechanisms,
- c) user and device remote access message formats and message exchanging flows, and
- d) remote data and service distribution and sharing mechanisms.

This document is applicable to remote access of an IGRS sub-network (called an IGRS subnet) for resource sharing and service collaboration among home and/or remote computers, consumer electronics and communication devices.
