|------------------------------------------------------------------------------------------------|----|
| 1 Scope .....                                                                                  | 15 |
| 2 Normative references .....                                                                   | 15 |
| 3 Terms, definitions, symbols, abbreviations, and conventions .....                            | 15 |
| 3.1 Terms and definitions .....                                                                | 15 |
| 3.2 Symbols and Abbreviations .....                                                            | 30 |
| 3.2.1 Abbreviations .....                                                                      | 30 |
| 3.2.2 Units .....                                                                              | 30 |
| 3.3 Keywords .....                                                                             | 30 |
| 3.4 Editorial conventions .....                                                                | 32 |
| 3.5 Numeric and character conventions .....                                                    | 33 |
| 3.5.1 Numeric conventions .....                                                                | 33 |
| 3.5.2 Byte encoded character strings conventions .....                                         | 34 |
| 3.6 UML notation conventions .....                                                             | 34 |
| 3.6.1 Notation conventions overview .....                                                      | 34 |
| 3.6.2 Constraint and note conventions .....                                                    | 34 |
| 3.6.3 Class diagram conventions .....                                                          | 35 |
| 3.6.4 Object diagram conventions .....                                                         | 40 |
| 3.7 State machine conventions .....                                                            | 42 |
| 3.7.1 State machine conventions overview .....                                                 | 42 |
| 3.7.2 Transitions .....                                                                        | 43 |
| 3.7.3 Messages, requests, indications, confirmations, responses, and event notifications ..... | 43 |
| 3.7.4 State machine counters, timers, and variables .....                                      | 44 |
| 3.8 Bit and byte ordering .....                                                                | 44 |
| 3.9 Notation for procedure calls .....                                                         | 46 |
| 4 SCSI architecture model .....                                                                | 47 |
| 4.1 Overview .....                                                                             | 47 |
| 4.2 Compliance requirements .....                                                              | 47 |
| 4.3 The SCSI distributed service model .....                                                   | 49 |
| 4.4 The SCSI client-server model .....                                                         | 50 |
| 4.4.1 SCSI client-server model overview .....                                                  | 50 |
| 4.4.2 Synchronizing client and server changes .....                                            | 51 |
| 4.4.3 Server request/response ordering .....                                                   | 51 |
| 4.5 The SCSI structural model .....                                                            | 52 |
| 4.6 SCSI classes .....                                                                         | 53 |
| 4.6.1 SCSI classes overview .....                                                              | 53 |
| 4.6.2 SCSI Domain class .....                                                                  | 54 |
| 4.6.3 Service Delivery Subsystem class .....                                                   | 55 |
| 4.6.4 SCSI Device class .....                                                                  | 55 |
| 4.6.4.1 SCSI Device class overview .....                                                       | 55 |
| 4.6.4.2 SCSI Device Name attribute .....                                                       | 56 |
| 4.6.5 SCSI Port class .....                                                                    | 57 |
| 4.6.5.1 SCSI Port class overview .....                                                         | 57 |
| 4.6.5.2 Relative Port Identifier attribute .....                                               | 58 |
| 4.6.6 SCSI Target Port class .....                                                             | 58 |
| 4.6.6.1 SCSI Target Port class overview .....                                                  | 58 |
| 4.6.6.2 Target Port Identifier attribute .....                                                 | 58 |
| 4.6.6.3 Target Port Name attribute .....                                                       | 59 |
| 4.6.6.4 Send Data-In operation .....                                                           | 59 |
| 4.6.6.5 Receive Data-Out operation .....                                                       | 59 |
| 4.6.6.6 Terminate Data Transfer operation .....                                                | 59 |
| 4.6.6.7 Send Command Complete operation .....                                                  | 59 |
| 4.6.6.8 Task Management Function Executed operation .....                                      | 59 |
| 4.6.7 Task Router class .....                                                                  | 59 |
| 4.6.7.1 Task Router class overview .....                                                       | 59 |
| 4.6.7.2 Route Command operation .....                                                          | 60 |

|                                                                               |    |
|-------------------------------------------------------------------------------|----|
| 4.6.7.3 Route Task Management Function operation .....                        | 60 |
| 4.6.7.4 Reroute Conglomerate Command operation .....                          | 61 |
| 4.6.7.5 Reroute Conglomerate Task Management Functions operation.....         | 61 |
| 4.6.7.6 Stop Conglomerate Task Management Functions Rerouting operation ..... | 62 |
| 4.6.8 SCSI Initiator Port class .....                                         | 62 |
| 4.6.8.1 SCSI Initiator Port class overview .....                              | 62 |
| 4.6.8.2 Initiator Port Identifier attribute .....                             | 63 |
| 4.6.8.3 Initiator Port Name attribute .....                                   | 63 |
| 4.6.8.4 Send SCSI Command operation .....                                     | 63 |
| 4.6.8.5 Send Task Management Request operation.....                           | 63 |
| 4.6.8.6 Get Initiator Port Identifier operation .....                         | 63 |
| 4.6.8.7 Get Initiator Port Name operation.....                                | 63 |
| 4.6.9 SCSI Target Device class .....                                          | 64 |
| 4.6.10 Logical Unit Conglomerate class .....                                  | 65 |
| 4.6.11 Level 1 Hierarchical Logical Unit class .....                          | 66 |
| 4.6.12 Level 2 Hierarchical Logical Unit class .....                          | 67 |
| 4.6.13 Level 3 Hierarchical Logical Unit class .....                          | 68 |
| 4.6.14 Level 4 Hierarchical Logical Unit class .....                          | 68 |
| 4.6.15 Hierarchical Logical Unit class .....                                  | 68 |
| 4.6.16 Management Logical Unit class .....                                    | 68 |
| 4.6.17 Well Known Logical Unit class .....                                    | 69 |
| 4.6.18 Logical Unit class .....                                               | 69 |
| 4.6.18.1 Logical Unit class overview .....                                    | 69 |
| 4.6.18.2 LUN attribute .....                                                  | 71 |
| 4.6.18.3 Logical Unit Name attribute .....                                    | 71 |
| 4.6.18.4 Dependent Logical Unit attribute .....                               | 72 |
| 4.6.18.5 Device Type attribute .....                                          | 72 |
| 4.6.19 Device Server class .....                                              | 72 |
| 4.6.19.1 Device Server class overview .....                                   | 72 |
| 4.6.19.2 Data-In Delivered operation .....                                    | 72 |
| 4.6.19.3 Data-Out Received operation.....                                     | 72 |
| 4.6.19.4 Data Transfer Terminated operation .....                             | 73 |
| 4.6.20 Copy Manager class .....                                               | 73 |
| 4.6.20.1 Copy Manager class overview .....                                    | 73 |
| 4.6.20.2 Create ROD Token operation.....                                      | 73 |
| 4.6.20.3 Process ROD Token operation .....                                    | 73 |
| 4.6.21 Task Manager class.....                                                | 73 |
| 4.6.21.1 Task Manager class overview .....                                    | 73 |
| 4.6.21.2 SCSI Command Received operation .....                                | 73 |
| 4.6.21.3 Task Management Request Received operation .....                     | 74 |
| 4.6.21.4 Data Transfer Terminated operation .....                             | 74 |
| 4.6.21.5 Nexus Loss operation.....                                            | 74 |
| 4.6.21.6 Transport Reset operation.....                                       | 74 |
| 4.6.21.7 Power Loss Expected operation.....                                   | 74 |
| 4.6.22 Task Set class.....                                                    | 74 |
| 4.6.23 Command class .....                                                    | 74 |
| 4.6.23.1 Command class overview .....                                         | 74 |
| 4.6.23.2 I_T_L Nexus attribute .....                                          | 74 |
| 4.6.23.3 Command Identifier attribute .....                                   | 75 |
| 4.6.23.4 Task Attribute attribute .....                                       | 75 |
| 4.6.23.5 CDB attribute.....                                                   | 75 |
| 4.6.23.6 CRN attribute.....                                                   | 75 |
| 4.6.23.7 Command Priority attribute.....                                      | 75 |
| 4.6.23.8 Status attribute .....                                               | 75 |
| 4.6.23.9 Sense Data attribute.....                                            | 75 |
| 4.6.23.10 Sense Data Length attribute.....                                    | 75 |
| 4.6.23.11 Service Response attribute .....                                    | 75 |
| 4.6.23.12 Status Qualifier attribute.....                                     | 75 |

|                                                                                                           |    |
|-----------------------------------------------------------------------------------------------------------|----|
| 4.6.23.13 First Burst Enabled attribute .....                                                             | 75 |
| 4.6.23.14 Device Server Buffer attribute .....                                                            | 75 |

| 5.4.1 SCSI transport protocol services for SCSI commands overview .....                          | 124 |
| 5.4.2 Command and status SCSI transport protocol services .....                                  | 125 |
| 5.4.2.1 Command and status SCSI transport protocol services overview .....                       | 125 |
| 5.4.2.2 Send SCSI Command SCSI transport protocol service request .....                          | 125 |
| 5.4.2.3 SCSI Command Received SCSI transport protocol service indication .....                   | 125 |
| 5.4.2.4 Send Command Complete SCSI transport protocol service response .....                     | 126 |
| 5.4.2.5 Command Complete Received SCSI transport protocol service confirmation.....              | 126 |
| 5.4.3 Data transfer SCSI transport protocol services.....                                        | 127 |
| 5.4.3.1 Overview .....                                                                           | 127 |
| 5.4.3.2 Data-In delivery service.....                                                            | 129 |
| 5.4.3.2.1 Send Data-In SCSI transport protocol service request.....                              | 129 |
| 5.4.3.2.2 Data-In Delivered SCSI transport protocol service confirmation .....                   | 129 |
| 5.4.3.3 Data-Out delivery service .....                                                          | 129 |

|                                                                                                                  |     |
|------------------------------------------------------------------------------------------------------------------|-----|
| 5.4.3.3.1 Receive Data-Out SCSI transport protocol service request .....                                         | 129 |
| 5.4.3.3.2 Data-Out Received SCSI transport protocol service confirmation .....                                   | 130 |
| 5.4.3.4 Terminate Data Transfer service .....                                                                    | 130 |
| 5.4.3.4.1 Terminate Data Transfer SCSI transport protocol service request .....                                  | 130 |
| 5.4.3.4.2 Data Transfer Terminated SCSI transport protocol service confirmation .....                            | 131 |
| 5.5 Command lifetime .....                                                                                       | 131 |
| 5.6 Aborting commands .....                                                                                      | 132 |
| 5.7 Command processing example .....                                                                             | 139 |
| 5.8 Commands that complete with CHECK CONDITION status .....                                                     | 140 |
| 5.8.1 Overview .....                                                                                             | 140 |
| 5.8.2 Handling commands when ACA is not in effect .....                                                          | 140 |
| 5.8.3 Aborting commands terminated with a CHECK CONDITION status without establishing an ACA .....               | 140 |
| 5.9 Auto contingent allegiance (ACA) .....                                                                       | 141 |
| 5.9.1 ACA overview .....                                                                                         | 141 |
| 5.9.2 Establishing an ACA .....                                                                                  | 141 |
| 5.9.3 Handling new commands received on the faulted I_T nexus when ACA is in effect .....                        | 142 |
| 5.9.4 Handling new commands received on non-faulted I_T nexuses when ACA is in effect .....                      | 142 |
| 5.9.4.1 Command processing that is permitted for commands received on a non-faulted I_T nexuses during ACA ..... | 142 |
| 5.9.4.2 Handling new commands received on non-faulted I_T nexuses when ACA is in effect .....                    | 142 |
| 5.9.5 Clearing an ACA condition .....                                                                            | 143 |
| 5.10 Overlapped commands .....                                                                                   | 144 |
| 5.11 Incorrect logical unit numbers for commands .....                                                           | 145 |
| 5.12 Task attribute exception conditions .....                                                                   | 145 |
| 5.13 Sense data .....                                                                                            | 146 |
| 5.13.1 Command terminated sense data or polled sense data .....                                                  | 146 |
| 5.13.2 Command completed sense data .....                                                                        | 146 |
| 5.14 Unit attention conditions .....                                                                             | 146 |
| 5.14.1 Unit attention conditions that are not coalesced .....                                                    | 146 |
| 5.14.2 Coalescing unit attention conditions .....                                                                | 149 |
| 6 SCSI events and event notification model .....                                                                 | 151 |
| 6.1 SCSI events overview .....                                                                                   | 151 |
| 6.2 Establishing a unit attention condition subsequent to detection of an event .....                            | 153 |
| 6.3 Conditions resulting from SCSI events .....                                                                  | 154 |
| 6.3.1 Power on .....                                                                                             | 154 |
| 6.3.2 Hard reset .....                                                                                           | 155 |
| 6.3.3 Logical unit reset .....                                                                                   | 155 |
| 6.3.4 I_T nexus loss .....                                                                                       | 156 |
| 6.3.5 Power loss expected .....                                                                                  | 156 |
| 6.4 SCSI transport protocol services for event notification .....                                                | 157 |
| 6.4.1 SCSI transport protocol service for event notification overview .....                                      | 157 |
| 6.4.2 Nexus Loss SCSI transport protocol service indication .....                                                | 157 |
| 6.4.3 Transport Reset SCSI transport protocol service indication .....                                           | 157 |
| 6.4.4 Power Loss Expected SCSI transport protocol service indication .....                                       | 157 |
| 7 Task management functions .....                                                                                | 159 |
| 7.1 Task management function procedure calls .....                                                               | 159 |
| 7.2 ABORT TASK .....                                                                                             | 160 |
| 7.3 ABORT TASK SET .....                                                                                         | 161 |
| 7.4 CLEAR ACA .....                                                                                              | 161 |
| 7.5 CLEAR TASK SET .....                                                                                         | 162 |
| 7.6 I_T NEXUS RESET .....                                                                                        | 162 |
| 7.7 LOGICAL UNIT RESET .....                                                                                     | 163 |
| 7.8 QUERY TASK .....                                                                                             | 163 |
| 7.9 QUERY TASK SET .....                                                                                         | 164 |
| 7.10 QUERY ASYNCHRONOUS EVENT .....                                                                              | 164 |
| 7.11 Task management function lifetime .....                                                                     | 166 |

|                                                                                                   |     |
|---------------------------------------------------------------------------------------------------|-----|
| 7.12 SCSI transport protocol services for task management functions .....                         | 166 |
| 7.12.1 SCSI transport protocol services for task management functions overview .....              | 166 |
| 7.12.2 Send Task Management Request SCSI transport protocol service request .....                 | 167 |
| 7.12.3 Task Management Request Received SCSI transport protocol service indication .....          | 167 |
| 7.12.4 Task Management Function Executed SCSI transport protocol service response .....           | 167 |
| 7.12.5 Received Task Management Function Executed SCSI transport protocol service confirmation .. | 168 |
| 7.13 Task management function example .....                                                       | 169 |
| 8 Task set management .....                                                                       | 171 |
| 8.1 Task set management overview .....                                                            | 171 |
| 8.2 Implicit head of queue .....                                                                  | 171 |
| 8.3 Command management model .....                                                                | 171 |
| 8.4 Task attributes .....                                                                         | 172 |
| 8.4.1 Overview .....                                                                              | 172 |
| 8.4.2 Commands having the SIMPLE task attribute .....                                             | 172 |
| 8.4.3 Commands having the ORDERED task attribute .....                                            | 172 |
| 8.4.4 Commands having the HEAD OF QUEUE task attribute .....                                      | 172 |
| 8.4.5 Commands having the ACA task attribute .....                                                | 172 |
| 8.5 Command priority .....                                                                        | 173 |
| 8.6 Command duration limit .....                                                                  | 173 |
| 8.6.1 Command duration limit overview .....                                                       | 173 |
| 8.6.2 Command duration scheduling .....                                                           | 174 |
| 8.7 LU (logical unit) state machines .....                                                        | 174 |
| 8.7.1 LU state machine overview .....                                                             | 174 |
| 8.7.2 LU_TM (task manager) state machine .....                                                    | 176 |
| 8.7.2.1 LU_TM state machine overview .....                                                        | 176 |
| 8.7.2.2 LU_TM command processing .....                                                            | 177 |
| 8.7.2.3 LU_TM task management function processing .....                                           | 179 |
| 8.7.2.4 LU_TM event processing .....                                                              | 180 |
| 8.7.2.5 LU_TM terminated command processing .....                                                 | 182 |
| 8.7.2.5.1 LU_TM ACA not established .....                                                         | 182 |
| 8.7.2.5.2 LU_TM ACA established .....                                                             | 183 |
| 8.7.3 LU_DS (device server) state machine .....                                                   | 185 |
| 8.7.3.1 LU_DS state machine overview .....                                                        | 185 |
| 8.7.3.2 LU_DS command processing .....                                                            | 185 |

## INFORMATION TECHNOLOGY – SMALL COMPUTER SYSTEM INTERFACE (SCSI) –

### Part 415: SCSI Architecture Model - 5 (SAM-5)

#### FOREWORD

- 1) ISO (the International Organization for Standardization) and IEC (the International Electrotechnical Commission) form the specialized system for worldwide standardization. National bodies that are members of ISO or IEC participate in the development of International Standards through technical committees established by the respective organization to deal with particular fields of technical activity. ISO and IEC technical committees collaborate in fields of mutual interest. Other international organizations, governmental and non-governmental, in liaison with ISO and IEC, also take part in the work. In the field of information technology, ISO and IEC have established a joint technical committee, ISO/IEC JTC 1.
- 2) The formal decisions or agreements of IEC and ISO on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees and ISO member bodies.
- 3) IEC, ISO and ISO/IEC publications have the form of recommendations for international use and are accepted by IEC National Committees and ISO member bodies in that sense. While all reasonable efforts are made to ensure that the technical content of IEC, ISO and ISO/IEC publications is accurate, IEC or ISO cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees and ISO member bodies undertake to apply IEC, ISO and ISO/IEC publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any ISO, IEC or ISO/IEC publication and the corresponding national or regional publication should be clearly indicated in the latter.
- 5) ISO and IEC do not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. ISO or IEC are not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or ISO or its directors, employees, servants or agents including individual experts and members of their technical committees and IEC National Committees or ISO member bodies for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication of, use of, or reliance upon, this ISO/IEC publication or any other IEC, ISO or ISO/IEC publications.
- 8) Attention is drawn to the normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this ISO/IEC publication may be the subject of patent rights. ISO and IEC shall not be held responsible for identifying any or all such patent rights.

International Standard ISO/IEC 14776-415 was prepared by subcommittee 25: Interconnection of information technology equipment, of ISO/IEC joint technical committee 1: Information technology.

The list of all currently available parts of the ISO/IEC 14776 series, under the general title *Information technology – Small computer system interface (SCSI)*, can be found on the ISO and IEC web sites.

The text of this document is based on the following documents:

|                    |                    |
|--------------------|--------------------|
| CDV                | Report on voting   |
| JTC1-SC25/2828/CDV | JTC1-SC25/2862/RVC |

Full information on the voting for the approval of this document can be found in the report on voting indicated in the above table.

This publication has been drafted in accordance with the ISO/IEC Directives, Part 2, except as described in 3.4 and 3.5.

A bilingual version of this publication may be issued at a later date.

**IMPORTANT - The 'colour inside' logo on the cover page of this publication indicates that it contains colours which are considered to be useful for the correct understanding of its contents. Users should therefore print this document using a colour printer.**

## INTRODUCTION

The purpose of this document is to provide a basis for the coordination of SCSI standards development and to define requirements, common to all SCSI technologies and implementations, that are essential for compatibility with host SCSI application software and device-resident firmware across all SCSI transport protocols. These requirements are defined through a reference model that specifies the behavior and abstract structure that is generic to all SCSI I/O system implementations.

Figure 1 shows the relationship of this document to the other standards and related projects in ISO/IEC 14776 (all parts) as of the publication of this document.

**Figure 1 — SCSI document structure**

The SCSI document structure in figure 1 is intended to show the general applicability of the documents to one another. Figure 1 is not intended to imply any hierarchy, protocol stack, or system architecture relationship.

The functional areas identified in figure 1 characterize the scope of standards within a group as follows:

**SCSI Architecture Model:** Defines the SCSI systems model, the functional partitioning of the SCSI standard set and requirements applicable to all SCSI implementations and implementation standards.

**Device-Type Specific Command Sets:** Implementation standards that define specific device types including a device model for each device type. These standards specify the required commands and behaviors that are specific to a given device type and prescribe the requirements to be followed by a SCSI initiator device when sending commands to a SCSI target device having the specific device type. The commands and behaviors for a specific device type may include by reference commands and behaviors that are defined by other command sets.

**Shared Command Set:** An implementation standard that defines a model for all SCSI device types. This document specifies the required commands and behavior that is common to all SCSI devices, regardless of device type, and prescribes the requirements to be followed by a SCSI initiator device when sending commands to any SCSI target device.

**SCSI Transport Protocols:** Implementation standards that define the requirements for exchanging information so that different SCSI devices are capable of communicating.

**Interconnects:** Implementation standards that define the communications mechanism employed by the SCSI transport protocols. These standards may describe the electrical and signaling requirements essential for SCSI devices to interoperate over a given interconnect. Interconnect standards may allow the interconnection of devices other than SCSI devices in ways that are outside the scope of this document.

The term SCSI is used to refer to ISO/IEC 14776 (all parts).

# INFORMATION TECHNOLOGY - SMALL COMPUTER SYSTEM INTERFACE (SCSI) -

## Part 415: SCSI Architecture Model - 5 (SAM-5)

### 1 Scope

The set of Small Computer System Interface (SCSI) standards consists of this document and the SCSI implementation standards described in 4.2. This document defines a reference model that specifies common behaviors for SCSI devices, and an abstract structure that is generic to all SCSI I/O system implementations.

The set of SCSI standards specifies the interfaces, functions, and operations necessary to ensure interoperability between conforming SCSI implementations. This document is a functional description. Conforming implementations employ any design technique that does not violate interoperability.

The following concepts from previous versions of the SAM standard are made obsolete by this version:

- a) support for the SPI-5 SCSI transport protocol;
- b) Contingent Allegiance;
- c) the TARGET RESET task management function;
- d) basic task management model;
- e) untagged tasks; and
- f) linked command function.

### 2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.
