**About the IEC**

The International Electrotechnical Commission (IEC) is the leading global organization that prepares and publishes International Standards for all electrical, electronic and related technologies.

**About IEC publications**

The technical content of IEC publications is kept under constant review by the IEC. Please make sure that you have the latest edition, a corrigendum or an amendment might have been published.

**IEC publications search -**

[webstore.iec.ch/advsearchform](http://webstore.iec.ch/advsearchform)

The advanced search enables to find IEC publications by a variety of criteria (reference number, text, technical committee, ...). It also gives information on projects, replaced and withdrawn publications.

**IEC Just Published - [webstore.iec.ch/justpublished](http://webstore.iec.ch/justpublished)**

Stay up to date on all new IEC publications. Just Published details all new publications released. Available online and once a month by email.

**IEC Customer Service Centre - [webstore.iec.ch/csc](http://webstore.iec.ch/csc)**

If you wish to give us your feedback on this publication or need further assistance, please contact the Customer Service Centre: [sales@iec.ch](mailto:sales@iec.ch).

**IEC Products & Services Portal - [products.iec.ch](http://products.iec.ch)**

Discover our powerful search engine and read freely all the publications previews, graphical symbols and the glossary. With a subscription you will always have access to up to date content tailored to your needs.

**Electropedia - [www.electropedia.org](http://www.electropedia.org)**

The world's leading online dictionary on electrotechnology, containing more than 22 500 terminological entries in English and French, with equivalent terms in 25 additional languages. Also known as the International Electrotechnical Vocabulary (IEV) online.

**Warning! Make sure that you obtained this publication from an authorized distributor.**

# Information technology – Home electronic system (HES) – Guidelines for product interoperability – Part 4: Event encoding

## FOREWORD

- 1) ISO (the International Organization for Standardization) and IEC (the International Electrotechnical Commission) form the specialized system for worldwide standardization. National bodies that are members of ISO or IEC participate in the development of International Standards through technical committees established by the respective organization to deal with particular fields of technical activity. ISO and IEC technical committees collaborate in fields of mutual interest. Other international organizations, governmental and non-governmental, in liaison with ISO and IEC, also take part in the work.
- 2) The formal decisions or agreements of IEC and ISO on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC and ISO National bodies.
- 3) IEC and ISO documents have the form of recommendations for international use and are accepted by IEC and ISO National bodies in that sense. While all reasonable efforts are made to ensure that the technical content of IEC and ISO documents is accurate, IEC and ISO cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC and ISO National bodies undertake to apply IEC and ISO documents transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC and ISO document and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC and ISO do not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC and ISO marks of conformity. IEC and ISO are not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this document.
- 7) No liability shall attach to IEC and ISO or their directors, employees, servants or agents including individual experts and members of its technical committees and IEC and ISO National bodies for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this ISO/IEC document or any other IEC and ISO documents.
- 8) Attention is drawn to the Normative references cited in this document. Use of the referenced publications is indispensable for the correct application of this document.
- 9) IEC and ISO draw attention to the possibility that the implementation of this document may involve the use of (a) patent(s). IEC and ISO take no position concerning the evidence, validity or applicability of any claimed patent rights in respect thereof. As of the date of publication of this document, IEC and ISO had not received notice of (a) patent(s), which may be required to implement this document. However, implementers are cautioned that this may not represent the latest information, which may be obtained from the patent database available at <https://patents.iec.ch> and [www.iso.org/patents](http://www.iso.org/patents). IEC and ISO shall not be held responsible for identifying any or all such patent rights.

ISO/IEC 18012-4 has been prepared by subcommittee 25: Interconnection of information technology equipment, of ISO/IEC joint technical committee 1: Information technology. It is an International Standard.

The text of this International Standard is based on the following documents:

Draft	Report on voting
JTC1-SC25/3270/CDV	JTC1-SC25/3312/RVC

Full information on the voting for its approval can be found in the report on voting indicated in the above table.

The language used for the development of this International Standard is English.

This document was drafted in accordance with ISO/IEC Directives, Part 2, and developed in accordance with ISO/IEC Directives, Part 1, and the ISO/IEC Directives, JTC 1 Supplement available at [www.iec.ch/members\\_experts/refdocs](http://www.iec.ch/members_experts/refdocs) and [www.iso.org/directives](http://www.iso.org/directives).

A list of all parts in the ISO/IEC 18012 series, published under the general title *Information technology – Home Electronic System (HES) – Guidelines for product interoperability*, can be found on the IEC and ISO websites.

The use of formatting with ***bold italics*** is used throughout this document for data formats as specified in ISO/IEC 18012-3.

## INTRODUCTION

### 0.1 Overview

The Home Electronic System (HES) is a set of standards that supports communication, control, and monitoring applications for homes and buildings. However, homes and buildings present a heterogeneous and evolving networked environment, where many of these networks and applications (including some that are based on HES standards) are not directly interoperable with each other. HES standards achieve interoperability through the ISO/IEC 15045 series to support functional interworking among the dissimilar home devices, applications, protocols, and networks found in this environment. The ISO/IEC 15045 series and ISO/IEC 18012 series were created to render all HES protocols interoperable.

The HES gateway enables an open and adaptable market for incompatible products by specifying a standardized modular system intended to provide interoperability among the diversity of networks found in homes and buildings built by a variety of manufacturers. The HES interoperability process does not require modification of the various networks, applications, or protocols that use it. Appropriate interworking functions translate network messages through interface modules to a common lexicon expression that is then exchanged using a private internal network bus protocol using modules that can be built by a variety of manufacturers. A protected application platform using a bus protocol supports an expanding array of services for both the applications and the network.

In summary, the ISO/IEC 15045 series specifies a standardized, modular, dedicated, private, internal network system that includes:

- interfaces (i.e. interface modules) for communications and semantic translation among dissimilar home area networks (HANs), and between a HAN and external wide area networks (WANs),
- a platform for supporting a variety of application services (i.e. service modules), and
- a secure communication path among these modular elements with access restricted to the appropriate elements in order to protect data, safety and privacy.

Interworking is achieved with a translation process by which a message between devices on two networks that use different protocols (including different application languages) is first converted into a common HES (internal) linguistic expression and then back into an equivalent message for the other network. This conversion is accomplished by an interworking function (IWF) residing in interface modules for each network. These messages are initiated by changes-of-state relating to objects associated with devices connected to networks, and are known as events. The HES common language message exchange (HES-CLME) event messages employ a standardized syntax and semantic expressions defined by the HES lexicon specified in ISO/IEC 18012-3. The format of the messages (i.e. the message protocol data unit – PDU) is defined in this document).

### 0.2 Relation to existing work

The HES gateway system is specified in ISO/IEC 15045-1. Several structural configurations of the HES gateway system are specified in ISO/IEC 15045-4-1. All classes use the HES interoperability system specified above. However, in some that use physically separated HES gateway modules, communication among modular elements is provided by a dedicated private internet serial bus (based on Ethernet, see RFC 1918) that utilizes a set of protocols specified in ISO/IEC 15045-2, which is now known as common language message exchange (HES-CLME).

ISO/IEC 18012-1 introduces the necessity for an interoperability standard among home system applications to ensure that applications interoperate in a safe, reliable, predictable and consistent manner. The interworking function (IWF) is specified in ISO/IEC 18012-2. The message content (protocol data unit or PDU) is defined in ISO/IEC 18012-3 and in this document. All HES gateway structural class configurations use the same interworking functions, including lexicon, and event encoding.

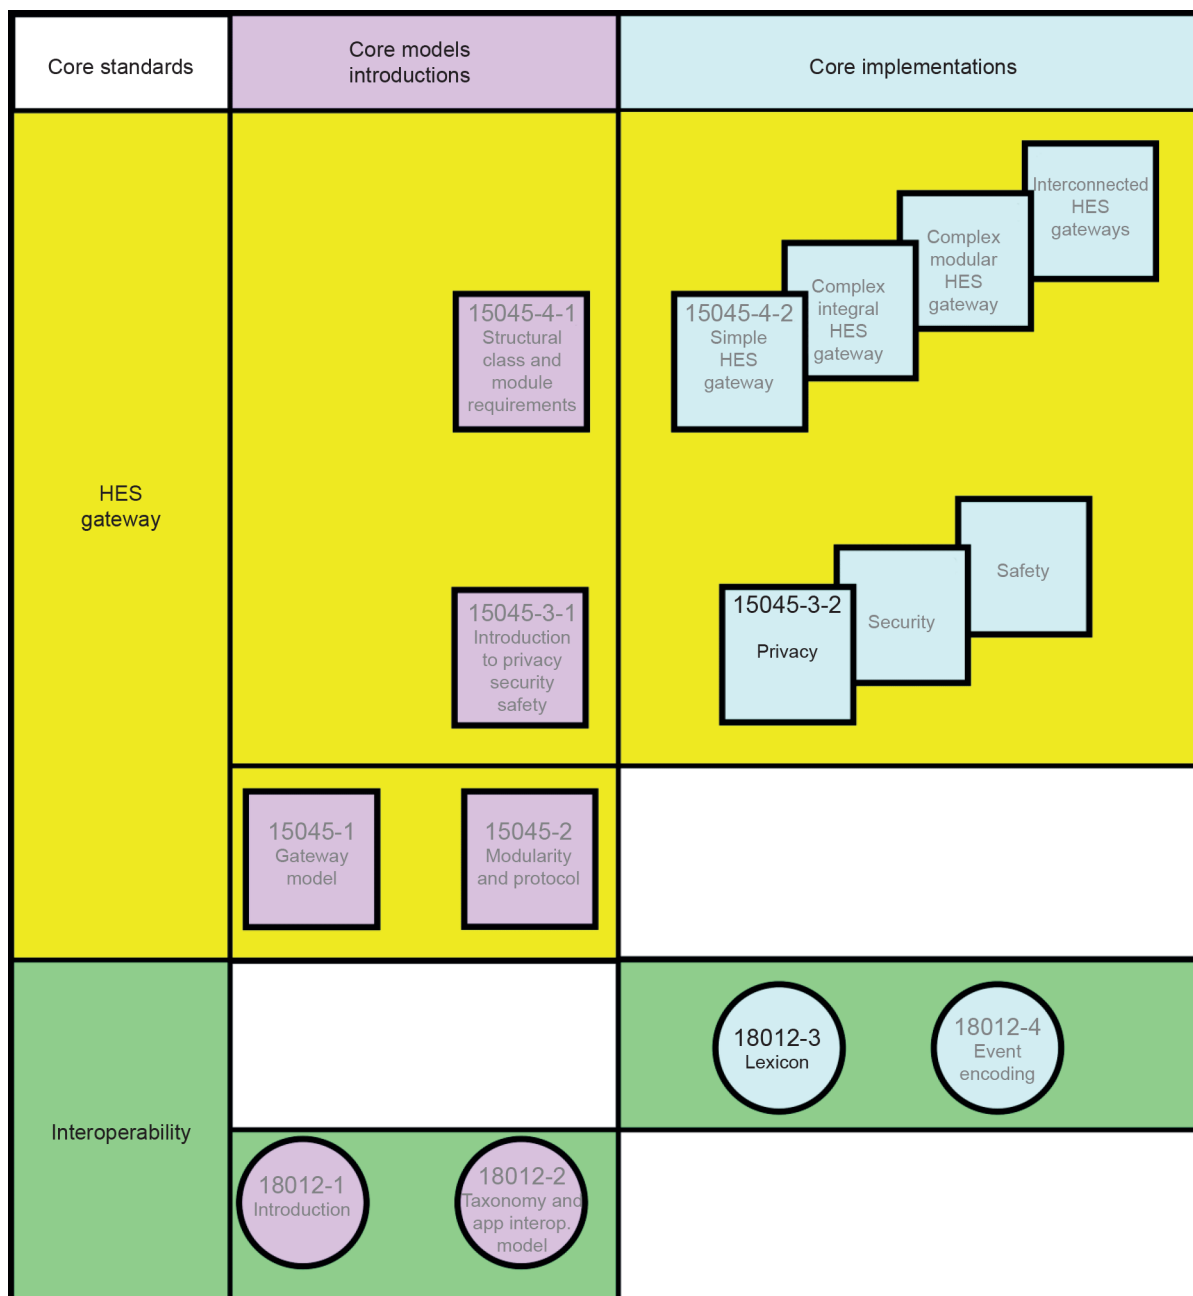

### **0.3 Lexicon and event encoding**

ISO/IEC 18012-3 specifies the standardized HES application objects, functions (actions), and variables, as well as their expression (symbolic encoding) and their semantic meaning and their syntactic usage. These are the elements to construct IWFs for each specific network. Because of the dynamic heterogeneous nature of the home and building networking environment, it is intended that these elements, including the IWFs for each network, be maintained in a standardized online metadata registry to allow for future expansion while maintaining semantic interoperability. As the HES lexicon is expanded, there will be coordination with the appropriate trade or standards organizations to ensure the semantic meanings cover the range of applications and systems of those industries.

In addition, standardized test procedures, plugfests, and technical guidance reports are anticipated in the future to prove completeness and ensure interoperability among the range of applications and systems.

This document specifies the specific format of the PDUs for various events to be utilized in serial bus data packet exchange (e.g. HES-CLIP) or direct API exchanges (e.g. HES-CLDPE) within a gateway. The format provides fast reliable message exchanges with low complexity requirements.

Figure 1 shows the core interoperability and ISO/IEC 15045 series of standards and where this document fits into the series.

IEC

**Figure 1 – ISO/IEC 18012-4 within the core interoperability and HES gateway standards**

## 1 Scope

This document specifies an event exchange format that defines the encoding of individual events in the interoperability domain. This event format is used to encode events for exchange across the “event bus” within the interoperability domain.

## 2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.
