Foreword

ISO (the International Organization for Standardization) and IEC (the International Electrotechnical Commission) form the specialized system for worldwide standardization. National bodies that are members of ISO or IEC participate in the development of International Standards through technical committees established by the respective organization to deal with particular fields of technical activity. ISO and IEC technical committees collaborate in fields of mutual interest. Other international organizations, governmental and non-governmental, in liaison with ISO and IEC, also take part in the work. In the field of information technology, ISO and IEC have established a joint technical committee, ISO/IEC JTC 1.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular the different approval criteria needed for the different types of document should be noted (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO and IEC shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation on the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT) see the following URL: www.iso.org/iso/foreword.html.

This document was prepared by DIN, German Institute for Standardization (as national standard DIN 66399-3) and drafted in accordance with its editorial rules. It was assigned to Joint Technical Committee ISO/IEC JTC 1, *Information technology*, and adopted under the “fast-track procedure”.

A list of all parts in the ISO/IEC 21964 series can be found on the ISO website.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at www.iso.org/members.html.

Introduction

Everybody, who processes confidential, personal and/or sensitive data, for themselves or on behalf of others, is obliged to ensure an adequate and secure disposal and destruction of data carrier.

Secure destruction means in this regard, that the data carriers, on which the information in need of protection is represented, are destroyed in a way, that the reproduction of the represented information are either impossible or most widely aggravated (ISO/IEC 21964-1 and ISO/IEC 21964-2).

Not just the secure destruction itself should be noted, but also the whole process from the point of origin through to the environmentally friendly recycling/disposal in accordance with laws and regulations currently in force.

Information technology — Destruction of data carriers —

Part 3:

Process of destruction of data carriers

1 Scope

This standard defines the requirements for the process of destruction of data carriers and is applicable for the responsible authority and for all parties who are involved in the destruction process.

2 Normative references

The following quoted documents are required for the application of this document. For dated references only the referred version is valid. For undated references, the last issued version is valid (including all changes).

ISO/IEC 21964-1, *Information Technology — Destruction of data carriers — Part 1: Principles and Definitions*

ISO/IEC 21964-2, *Information Technology — Destruction of data carriers — Part 2: Requirements for equipment for destruction of data carriers*
