Foreword

ISO (the International Organization for Standardization) and IEC (the International Electrotechnical Commission) form the specialized system for worldwide standardization. National bodies that are members of ISO or IEC participate in the development of International Standards through technical committees established by the respective organization to deal with particular fields of technical activity. ISO and IEC technical committees collaborate in fields of mutual interest. Other international organizations, governmental and non-governmental, in liaison with ISO and IEC, also take part in the work.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of document should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives or www.iec.ch/members_experts/refdocs).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO and IEC shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents) or the IEC list of patent declarations received (see <https://patents.iec.ch>).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT) see www.iso.org/iso/foreword.html. In the IEC, see www.iec.ch/understanding-standards.

This document was prepared by Joint Technical Committee ISO/IEC JTC 1, *Information technology*, Subcommittee SC 29, *Coding of audio, picture, multimedia and hypermedia information*, in collaboration with ITU-T (as Rec. ITU-T H.266.2).

A list of all parts in the ISO/IEC 23090 series can be found on the ISO and IEC websites.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at www.iso.org/members.html and www.iec.ch/national-committees.

Introduction

This document provides reference software for Rec. ITU-T H.266 | ISO/IEC 23090-3. The reference software includes both encoder and decoder functionality.

Reference software is useful in aiding users of a video coding standard to establish and test conformance and interoperability, and to educate users and demonstrate the capabilities of the standard. For these purposes, the accompanying software is provided as an aid for the study and implementation of Rec. ITU-T H.266 | ISO/IEC 23090-3 Versatile video coding.

The software has been jointly developed by the ITU-T Visual Coding Experts Group (VCEG, Question 6 of ITU-T Study Group 16) and the ISO/IEC Moving Picture Experts Group (MPEG Joint Video Coding Team with ITU-T SG 16, Working Group 5 of Subcommittee 29 of ISO/IEC Joint Technical Committee 1).

0.1 Purpose

The purpose of this document is to provide the following:

- Reference decoder software capable of decoding bitstreams that conform to Rec. ITU-T H.266 | ISO/IEC 23090-3 in a manner that conforms to the decoding process specified in Rec. ITU-T H.266 | ISO/IEC 23090-3.
- Reference encoder software capable of producing bitstreams that conform to Rec. ITU-T H.266 | ISO/IEC 23090-3.

0.2 Examples of use

Some examples of uses that can be appropriate for the reference decoder software are as follows:

- As an illustration of how to perform the decoding process specified in Rec. ITU-T H.266 | ISO/IEC 23090-3.
- As the starting basis for the implementation of a decoder that conforms to Rec. ITU-T H.266 | ISO/IEC 23090-3.
- For testing the conformance of a decoder implementation with the decoding process specified in Rec. ITU-T H.266 | ISO/IEC 23090-3 (as the values of the samples in all output cropped decoded pictures and the relative ordering of those pictures will be identical from all conforming decoder implementations that support the profile and level used in a bitstream that conforms to Rec. ITU-T H.266 | ISO/IEC 23090-3).
- For testing the conformance of a bitstream to the constraints specified for bitstream conformance in Rec. ITU-T H.266 | ISO/IEC 23090-3, as the software can detect and report many bitstream conformance violations.

NOTE 1 The lack of the detection of any conformance violation by the reference decoder software is not considered as definitive proof that the bitstream conforms to all constraints specified for bitstream conformance in Rec. ITU-T H.266 | ISO/IEC 23090-3.

Some examples of uses that can be appropriate for the reference encoder software are as follows:

- As an illustration of how to perform an encoding process that produces bitstreams that conform to the constraints specified for bitstream conformance in Rec. ITU-T H.266 | ISO/IEC 23090-3.
- As the starting basis for the implementation of an encoder that conforms to Rec. ITU-T H.266 | ISO/IEC 23090-3.
- As a means of generating bitstreams for testing the conformance of a decoder implementation with the decoding process specified in Rec. ITU-T H.266 | ISO/IEC 23090-3.
- As a means of evaluating and demonstrating examples of the quality that can be achieved by an encoding process that conforms to Rec. ITU-T H.266 | ISO/IEC 23090-3.

NOTE 2 No guarantee of the quality that will be achieved by an encoder is provided by its conformance to Rec. ITU-T H.266 | ISO/IEC 23090-3, as the conformance of an encoder to Rec. ITU-T H.266 | ISO/IEC 23090-3 is defined only in terms of format constraints imposed on the bitstream syntax. While the reference encoder software suffices to provide some illustrative examples of what quality can be achieved in conformance to Rec. ITU-T H.266 | ISO/IEC 23090-3, it provides neither an assurance of minimum guaranteed video encoding quality nor maximum achievable video encoding quality.

Warranty disclaimer

Regardless of any and all statements made herein or elsewhere regarding the possible uses of the reference software, the following disclaimers of warranty apply to the provided reference software:

- ITU and ISO/IEC disclaim any and all warranties, whether express, implied, or statutory, including any implied warranties of merchantability or of fitness for a particular purpose.
- In no event shall the contributor(s), ITU or ISO/IEC be liable for any incidental, punitive, or consequential damages of any kind whatsoever arising from the use of these programs.
- This disclaimer of warranty extends to the user of these programs and user's customers, employees, agents, transferees, successors, and assignees.

Information technology — Coded representation of immersive media —

Part 16: Reference software for versatile video coding

1 Scope

This document establishes a reference software for Rec. ITU-T H.266 | ISO/IEC 23090-3 available at: <https://standards.iso.org/iso-iec/23090/-16/ed-1/en/>. The software is an integral part of this document.

NOTE The use of this reference software is not required for making an implementation of an encoder or decoder in conformance to Rec. ITU-T H.266 | ISO/IEC 23090-3. Requirements established in Rec. ITU-T H.266 | ISO/IEC 23090-3 take precedence over the behaviour of the reference software.

2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.
