6.4.1	General	28
6.4.2	Schema specification of a group	28
6.4.3	Group block length	28
6.4.4	Padding at end of a group entry	28
6.4.5	Entry counter	29
6.4.6	Empty group	29
6.4.7	Multiple repeating groups	29
6.4.8	Nested repeating group specification	29
6.4.9	Nested repeating group wire format	29
6.4.10	Empty group means nested group is empty	29
6.4.11	Group dimension encoding	30
6.5	Sequence of message body elements	31
6.5.1	Root level elements	31
6.5.2	Repeating group elements	31
6.6	Message structure validation	31
7	Message Schema	32
7.1	XML schema for SBE message schemas	32
7.2	XML namespace	32
7.3	Naming convention	32
7.3.1	General	32
7.3.2	Capitalization	32
7.4	Root element	32
7.4.1	General	32
7.4.2	<messageSchema> attributes	32
7.4.3	Schema versioning	33
7.5	Data encodings	33
7.5.1	Encoding sets	33
7.5.2	Encoding name	33
7.5.3	Simple encodings	33
7.5.4	General	33
7.5.5	Composite encodings	35
7.5.6	Reference to reusable types	36
7.5.7	Enumeration encodings	37
7.5.8	Multi-value choice encodings (bitset)	38
7.6	Message template	40
7.6.1	General	40
7.6.2	Reserved space	40
7.6.3	Message members	40
7.6.4	Member order	40
7.6.5	<message> element attributes	40
7.7	Field attributes	41
7.8	Repeating group schema	42
7.9	Schema validation	43
7.9.1	General	43
7.9.2	Message with a repeating group	44
7.9.3	Message with raw data fields	44
7.10	Reserved element names	44
7.10.1	Composite types	44
7.10.2	Composite type elements	44

8 Schema Extension Mechanism	45
8.1 Objective	45
8.1.1 General.....	45
8.1.2 Constraints.....	45
8.2 Message schema features for extension.....	46
8.2.1 Schema version.....	46
8.2.2 Since version.....	46
8.2.3 Block length.....	46
8.2.4 Deprecated elements.....	46
8.3 Wire format features for extension.....	46
8.3.1 Block size.....	46
8.3.2 Number of repeating groups and variable data	46
8.4 Compatibility strategy	46
8.5 Message schema extension example	47
8.5.1 Initial version of a message schema	47
8.5.2 Second version - a new message is added	47
8.5.3 Third version - a field is added	47
9 Usage Guidelines	48
9.1 Identifier encodings	48
10 Examples	48
10.1 General.....	48
10.2 Flat, fixed-length message.....	48
10.2.1 General.....	48
10.2.2 Sample order message schema.....	48
10.2.3 Wire format of an order message.....	50
10.3 Message with a repeating group	51
10.3.1 General.....	51
10.3.2 Sample execution report message schema.....	51
10.3.3 Wire format of an execution message	52
10.3.4 Interpretation.....	52
10.4 Message with a variable-length field	53
10.4.1 Sample business reject message schema	53
10.4.2 Wire format of a business reject message	53
10.4.3 Interpretation.....	54
Bibliography	55

Foreword

ISO (the International Organization for Standardization) and IEC (the International Electrotechnical Commission) form the specialized system for worldwide standardization. National bodies that are members of ISO or IEC participate in the development of International Standards through technical committees established by the respective organization to deal with particular fields of technical activity. ISO and IEC technical committees collaborate in fields of mutual interest. Other international organizations, governmental and non-governmental, in liaison with ISO and IEC, also take part in the work.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of document should be noted (see www.iso.org/directives or www.iec.ch/members_experts/refdocs).

ISO and IEC draw attention to the possibility that the implementation of this document may involve the use of (a) patent(s). ISO and IEC take no position concerning the evidence, validity or applicability of any claimed patent rights in respect thereof. As of the date of publication of this document, ISO and IEC had not received notice of (a) patent(s) which may be required to implement this document. However, implementers are cautioned that this may not represent the latest information, which may be obtained from the patent database available at www.iso.org/patents and <https://patents.iec.ch>. ISO and IEC shall not be held responsible for identifying any or all such patent rights.

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT), see www.iso.org/iso/foreword.html. In the IEC, see www.iec.ch/understanding-standards.

This document was prepared by FIX Trading Community [as FIX Simple Binary Encoding (SBE)] and drafted in accordance with its editorial rules. It was adopted, under the JTC 1 PAS procedure, by Joint Technical Committee ISO/IEC JTC 1, *Information technology*.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at www.iso.org/members.html and www.iec.ch/national-committees.

Introduction

The Financial Information eXchange Simple Binary Encoding (SBE) targets high performance trading systems. It is optimized for low latency of encoding and decoding while keeping bandwidth utilization reasonably small. For compatibility, it is intended to represent all FIX semantics. SBE is primarily a fixed length wire format but also supports variable length fields and repeating groups with fixed length entries. The wire format does not contain any meta-data other than length information for variable elements. The meta-data is a message schema provided out-of-band as an XML Schema Definition (XSD) file.

Financial Services – Financial Information eXchange – Simple Binary Encoding

1 Scope

This document provides the normative specification of Simple Binary Encoding (SBE), which is one of the possible syntaxes for FIX messages, but not limited to FIX messages. The scope comprises the encoding (wire format) and the message schema for SBE.

2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.
