Foreword

ISO (the International Organization for Standardization) and IEC (the International Electrotechnical Commission) form the specialized system for worldwide standardization. National bodies that are members of ISO or IEC participate in the development of International Standards through technical committees established by the respective organization to deal with particular fields of technical activity. ISO and IEC technical committees collaborate in fields of mutual interest. Other international organizations, governmental and non-governmental, in liaison with ISO and IEC, also take part in the work.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of document should be noted (see www.iso.org/directives or www.iec.ch/members_experts/refdocs).

ISO and IEC draw attention to the possibility that the implementation of this document may involve the use of (a) patent(s). ISO and IEC take no position concerning the evidence, validity or applicability of any claimed patent rights in respect thereof. As of the date of publication of this document, ISO and IEC had not received notice of (a) patent(s) which may be required to implement this document. However, implementers are cautioned that this may not represent the latest information, which may be obtained from the patent database available at www.iso.org/patents and <https://patents.iec.ch>. ISO and IEC shall not be held responsible for identifying any or all such patent rights.

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT), see www.iso.org/iso/foreword.html. In the IEC, see www.iec.ch/understanding-standards.

This document was prepared by DMTF [as Security Protocol and Data Model (SPDM) Collection] and drafted in accordance with its editorial rules. It was adopted, under the JTC 1 PAS procedure, by Joint Technical Committee ISO/IEC JTC 1, *Information technology*.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at www.iso.org/members.html and www.iec.ch/national-committees.

8.4.18 PSK_EXCHANGE request and PSK_EXCHANGE_RSP response messages	128
8.4.19 PSK_FINISH request and PSK_FINISH_RSP response messages	135
8.4.20 HEARTBEAT request and HEARTBEAT_ACK response messages	136
8.4.20.1 Heartbeat additional information	137
8.4.21 KEY_UPDATE request and KEY_UPDATE_ACK response messages	137
8.4.21.1 Session key update synchronization	138
8.4.21.2 KEY_UPDATE transport allowances	141
8.4.22 GET_ENCAPSULATED_REQUEST request and ENCAPSULATED_REQUEST response messages	144
8.4.22.1 Encapsulated request flow	144
8.4.22.2 Optimized encapsulated request flow	144
8.4.22.3 Triggering GET_ENCAPSULATED_REQUEST	147
8.4.22.4 Additional constraints	147
8.4.23 DELIVER_ENCAPSULATED_RESPONSE request and ENCAPSULATED_RESPONSE_ACK response messages	148
8.4.23.1 Additional information	150
8.4.23.2 Allowance for encapsulated requests	150
8.4.23.3 Certain error handling in encapsulated flows	151
8.4.23.3.1 Response not ready	151
8.4.23.3.2 Timeouts	151
8.4.24 END_SESSION request and END_SESSION_ACK response messages	151
8.4.25 Certificate provisioning	153
8.4.25.1 GET_CSR request and CSR response messages	153

8.4.25.2 SET_CERTIFICATE request and SET_CERTIFICATE_RSP response messages	156
8.4.26 Large SPDM message transfer mechanism	158
8.4.26.1 CHUNK_SEND request and CHUNK_SEND_ACK response message	158
8.4.26.2 CHUNK_GET request and CHUNK_RESPONSE response message	161
8.4.26.3 Additional chunk transfer requirements	163
8.4.27 Key configuration	164
8.4.27.1 GET_KEY_PAIR_INFO request and KEY_PAIR_INFO response	165
8.4.27.2 SET_KEY_PAIR_INFO request and SET_KEY_PAIR_INFO_ACK response	168
8.4.27.3 Key pair ID modification error handling	169
8.4.28 Event mechanism	170
8.4.28.1 GET_SUPPORTED_EVENT_TYPES request and SUPPORTED_EVENT_TYPES response message	172
8.4.28.1.1 Event group format additional information	174
8.4.28.2 SUBSCRIBE_EVENT_TYPES request and SUBSCRIBE_EVENT_TYPES_ACK response message	174
8.4.28.2.1 Additional subscription list information	175
8.4.28.3 SEND_EVENT request and EVENT_ACK response message	176
8.4.28.4 Event Instance ID	177
8.4.29 GET_ENDPOINT_INFO request and ENDPOINT_INFO response messages	178
8.4.29.1 ENDPOINT_INFO signature generation	181
8.4.29.2 ENDPOINT_INFO signature verification	181
8.4.30 Measurement extension log mechanism	182
8.4.30.1 GET_MEASUREMENT_EXTENSION_LOG request and MEASUREMENT_EXTENSION_LOG response messages	183
8.4.30.2 DMTF Measurement Extension Log Format	184
8.4.30.3 Example: Verifying Measurement Extension Log Against Hash-Extend Measurement	185
8.5 Session	187
8.5.1 Session handshake phase	187
8.5.2 Application phase	188
8.5.3 Session termination phase	188
8.5.4 Simultaneous active sessions	188
8.5.5 Records and session ID	189
8.6 Key schedule	189
8.6.1 DHE secret computation	191
8.6.2 Transcript hash in key derivation	192
8.6.3 TH1 definition	192
8.6.4 TH2 definition	192
8.6.5 Key schedule major secrets	193
8.6.5.1 Request-direction handshake secret	193
8.6.5.2 Response-direction handshake secret	193
8.6.5.3 Request-direction data secret	193
8.6.5.4 Response-direction data secret	193
8.6.6 Encryption key and IV derivation	194
8.6.7 finished_key derivation	194

8.6.8 Deriving additional keys from the Export Master Secret	195
8.6.9 Major secrets update	195
8.7 Application data	195
8.7.1 Nonce derivation	196
8.8 General opaque data format	196
8.9 Signature generation	197
8.9.1 Signing algorithms in extensions	198
8.9.2 RSA and ECDSA signing algorithms	198
8.9.3 EdDSA signing algorithms	199
8.9.3.1 Ed25519 sign	199
8.9.3.2 Ed448 sign	199
8.9.4 SM2 signing algorithm	199
8.9.5 Signature algorithm references	199
8.10 Signature verification	200

1 Foreword

The [Security Protocols and Data Models \(SPDM\)](#) Working Group of [DMTF](#) prepared the *Security Protocol and Data Model (SPDM) Specification* (DSP0274).

The [Platform Management Communications Infrastructure \(PMCI\)](#) Working Group of DMTF prepared the *Security Protocol and Data Model (SPDM) over MCTP Binding Specification* (DSP0275), the *Secured Messages using SPDM over MCTP Binding Specification* (DSP0276), and the *Secured Messages using SPDM Specification* (DSP0277).

DMTF is a not-for-profit association of industry members that promotes enterprise and systems management and interoperability. For information about DMTF, see <https://www.dmtf.org>.

[Table 1 — Component documents](#) lists the specifications that this collection contains.

Table 1 — Component documents

Document number	Document title	Version
DSP0274	Security Protocol and Data Model (SPDM) Specification	1.3.1
DSP0275	Security Protocol and Data Model (SPDM) over MCTP Binding Specification	1.0.2
DSP0276	Secured Messages using SPDM over MCTP Binding Specification	1.2.0
DSP0277	Secured Messages using SPDM Specification	1.2.0

2 Introduction

2.1 Security Protocol and Data Model (SPDM) Specification (DSP0274)

DSP0274 defines [messages](#), data objects, and sequences for performing message exchanges over a variety of transport and physical media. The description of message exchanges includes [authentication](#) and provisioning of hardware identities, measurement for firmware identities, session key exchange protocols to enable confidentiality with integrity-protected data communication, and other related capabilities. SPDM enables efficient access to low-level security capabilities and operations. In addition, other mechanisms, including non-DMTF-defined mechanisms, can use the SPDM.

2.2 SPDM over MCTP Binding Specification (DSP0275)

DSP0275 defines how SPDM is transported over MCTP communications. SPDM is supported as a message type over MCTP, and the SPDM over MCTP binding defines the format of SPDM messages transported over MCTP.

2.3 Secured Messages using SPDM over MCTP Binding Specification (DSP0276)

DSP0276 binds Secured Messages using the SPDM specification (DSP0277) to MCTP transport.

2.4 Secured Messages using SPDM Specification (DSP0277)

DSP0277 defines the methodology that various PMCI transports can use to communicate various application data securely by utilizing SPDM. Specifically, DSP0277 defines the transport requirements for SPDM records, which form the basis of encryption and message authentication. Furthermore, DSP0277 contains guidance and certain decisions that it defers to the binding specification, which binds Secured Messages to a specific transport. Thus, the binding specification is expected to finalize those decisions or guidance by way of normalization or recommendation. DSP0277 was written with PMCI transports in mind, but nothing precludes specifying bindings to other transports.

2.5 Advice

The authors of these specifications recommend that readers visit tutorial and educational materials under [Security Protocols and Data Models \(SPDM\)](#) and [Platform Management Communications Infrastructure \(PMCI\)](#) on the DMTF website prior to or during the reading of these specifications to aid in understanding them fully.

3 Scope

3.1 *Security Protocol and Data Model (SPDM) Specification (DSP0274)*

DSP0274 describes how to use messages, data objects, and sequences to exchange messages between two devices over a variety of transports and physical media. DSP0274 contains the message exchanges, sequence diagrams, message formats, and other relevant semantics for such message exchanges, including authentication of hardware identities and firmware measurements.

Other specifications define the mapping of these messages to different transports and physical media. DSP0274 provides information to enable security policy enforcement but does not specify individual policy decisions.

3.2 *SPDM over MCTP Binding Specification (DSP0275)*

DSP0275 defines the format of Security Protocol and Data Model (SPDM) over MCTP messages. DSP0275 describes both SPDM over MCTP binding and the common format for SPDM over MCTP messages.

3.3 *Secured Messages using SPDM over MCTP Binding Specification (DSP0276)*

DSP0276 binds Secured Messages using SPDM to MCTP transport and further defines the transport specific details as outlined in *Secured Messages using SPDM Specification (DSP0277)*. DSP0276 1.2.0 (this version) binds to version 1.2.0 and all 1.2 errata versions of DSP0277.

3.4 *Secured Messages using SPDM Specification (DSP0277)*

DSP0277 defines a generic record format used to encrypt and authenticate any application data within SPDM's secure session. Also, relating to encryption, message authentication, and secure sessions, DSP0277 further defines those areas in SPDM that the specification states are the responsibilities of the transport layer. DSP0277 requires SPDM version 1.1 or later.

4 Normative references

The following referenced documents are indispensable for the application of the specifications in this collection. For dated or versioned references, only the edition cited, including any corrigenda or DMTF update versions, applies. For references without date or version, the latest published edition of the referenced document, including any corrigenda or DMTF update versions, applies.
