CONTENTS

1	Overview and Scope.....	3
1.1	Introduction	3
1.2	Notation	3
1.2.1	Data Types	4
1.2.2	Strings Embedded in Other Strings	4
1.2.3	Extended Backus-Naur Form	4
1.3	Derived Data Types.....	5
1.3.1	Comma Separated Value (CSV) Lists.....	5
1.4	Management of XML Namespaces in Standardized DCPs	6
1.4.1	Namespace Prefix Requirements	9
1.4.2	Namespace Names, Namespace Versioning and Schema Versioning	10
1.4.3	Namespace Usage Examples.....	12
1.5	Vendor-defined Extensions	13
1.5.1	Vendor-defined Action Names.....	13
1.5.2	Vendor-defined State Variable Names.....	13
1.5.3	Vendor-defined XML Elements and attributes	13
1.5.4	Vendor-defined Property Names	13
1.6	References.....	13
2	Service Modeling Definitions.....	17
2.1	ServiceType	17
2.2	State Variables.....	17
2.2.1	<u>SourceProtocolInfo</u>	18
2.2.2	<u>SinkProtocolInfo</u>	18
2.2.3	<u>CurrentConnectionIDs</u>	18
2.2.4	<u>A_ARG_TYPE_ConnectionStatus</u>	19
2.2.5	<u>A_ARG_TYPE_ConnectionManager</u>	19
2.2.6	<u>A_ARG_TYPE_Direction</u>	19
2.2.7	<u>A_ARG_TYPE_ProtocolInfo</u>	19
2.2.8	<u>A_ARG_TYPE_ConnectionID</u>	19
2.2.9	<u>A_ARG_TYPE_AVTransportID</u>	19
2.2.10	<u>A_ARG_TYPE_RcsID</u>	19
2.3	Eventing and Moderation	20
2.4	Actions.....	20
2.4.1	<u>GetProtocolInfo()</u>	20
2.4.2	<u>PrepareForConnection()</u>	21
2.4.3	<u>ConnectionComplete()</u>	23
2.4.4	<u>GetCurrentConnectionIDs()</u>	24
2.4.5	<u>GetCurrentConnectionInfo()</u>	25
2.4.6	Common Error Codes	26
2.5	Theory of Operation.....	27
2.5.1	Purpose.....	27
2.5.2	<u>ProtocolInfo</u> Concept	27
2.5.3	Typical Control Point Operations.....	32
2.5.4	Relation to Devices without ConnectionManagers.....	33
2.5.5	<u>PrepareForConnection()</u> and <u>ConnectionComplete()</u>	33

3	XML Service Description	36
4	Test	39
	Annex A (normative) Protocol Specifics.....	40
	A.1 Application to HTTP Streaming	40
	A.1.1 <i>ProtocolInfo</i> Definition.....	40

INFORMATION TECHNOLOGY – UPnP DEVICE ARCHITECTURE –

Part 4-11: Audio Video Device Control Protocol – Level 2 – Connection Manager Service

FOREWORD

- 1) ISO (International Organization for Standardization) and IEC (International Electrotechnical Commission) form the specialized system for worldwide standardization. National bodies that are members of ISO or IEC participate in the development of International Standards. Their preparation is entrusted to technical committees; any ISO and IEC member body interested in the subject dealt with may participate in this preparatory work. International governmental and non-governmental organizations liaising with ISO and IEC also participate in this preparation.
- 2) In the field of information technology, ISO and IEC have established a joint technical committee, ISO/IEC JTC 1. Draft International Standards adopted by the joint technical committee are circulated to national bodies for voting. Publication as an International Standard requires approval by at least 75 % of the national bodies casting a vote.
- 3) The formal decisions or agreements of IEC and ISO on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC and ISO member bodies.
- 4) IEC, ISO and ISO/IEC publications have the form of recommendations for international use and are accepted by IEC and ISO member bodies in that sense. While all reasonable efforts are made to ensure that the technical content of IEC, ISO and ISO/IEC publications is accurate, IEC or ISO cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 5) In order to promote international uniformity, IEC and ISO member bodies undertake to apply IEC, ISO and ISO/IEC publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any ISO/IEC publication and the corresponding national or regional publication should be clearly indicated in the latter.
- 6) ISO and IEC provide no marking procedure to indicate their approval and cannot be rendered responsible for any equipment declared to be in conformity with an ISO/IEC publication.
- 7) All users should ensure that they have the latest edition of this publication.
- 8) No liability shall attach to IEC or ISO or its directors, employees, servants or agents including individual experts and members of their technical committees and IEC or ISO member bodies for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication of, use of, or reliance upon, this ISO/IEC publication or any other IEC, ISO or ISO/IEC publications.
- 9) Attention is drawn to the normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 10) Attention is drawn to the possibility that some of the elements of this International Standard may be the subject of patent rights. ISO and IEC shall not be held responsible for identifying any or all such patent rights.

International Standard ISO/IEC 29341-4-11 was prepared by UPnP Forum Steering committee¹, was adopted, under the fast track procedure, by subcommittee 25: Interconnection of information technology equipment, of ISO/IEC joint technical committee 1: Information technology.

This International Standard replaces ISO/IEC 29341-4-11, first edition, published in 2008, and constitutes a technical revision.

The list of all currently available parts of the ISO/IEC 29341 series, under the general title *Information technology – UPnP device architecture*, can be found on the IEC web site.

This International Standard has been approved by vote of the member bodies, and the voting results may be obtained from the address given on the second title page.

¹ UPnP Forum Steering committee, UPnP Forum, 3855 SW 153rd Drive, Beaverton, Oregon 97006 USA. See also "Introduction".

IMPORTANT – The “colour inside” logo on the cover page of this publication indicates that it contains colours which are considered to be useful for the correct understanding of its contents. Users should therefore print this publication using a colour printer.

1 Overview and Scope

1.1 Introduction

This service definition is compliant with the UPnP Device Architecture version 1.0.

This service-type enables modeling of streaming capabilities of A/V devices, and binding of those capabilities between devices. Each device that is able to send or receive a stream according to the UPnP AV Architecture will have 1 instance of the ConnectionManager service. This service provides a mechanism for control points to:

- a) Perform capability matching between source/server devices and sink/renderer devices,
- b) Find information about currently ongoing transfers in the network,
- c) Setup and teardown connections between devices (when required by the streaming protocol).

The ConnectionManager service is generic enough to properly abstract different kinds of streaming mechanisms, such as HTTP-based streaming, RTSP/RTP-based and 1394-based streaming.

The ConnectionManager enables control points to abstract from physical media interconnect technology when making connections. The term 'stream' used in this service template refers to both analog and digital data transfer.

1.2 Notation

- In this document, features are described as Required, Recommended, or Optional as follows:

The keywords "MUST," "MUST NOT," "REQUIRED," "SHALL," "SHALL NOT," "SHOULD," "SHOULD NOT," "RECOMMENDED," "MAY," and "OPTIONAL" in this specification are to be interpreted as described in [RFC 2119].

In addition, the following keywords are used in this specification:

PROHIBITED – The definition or behavior is prohibited by this specification. Opposite of **REQUIRED**.

CONDITIONALLY REQUIRED – The definition or behavior depends on a condition. If the specified condition is met, then the definition or behavior is **REQUIRED**, otherwise it is **PROHIBITED**.

CONDITIONALLY OPTIONAL – The definition or behavior depends on a condition. If the specified condition is met, then the definition or behavior is **OPTIONAL**, otherwise it is **PROHIBITED**.

These keywords are thus capitalized when used to unambiguously specify requirements over protocol and application features and behavior that affect the interoperability and security of implementations. When these words are not capitalized, they are meant in their natural-language sense.

- Strings that are to be taken literally are enclosed in "double quotes".
- Words that are emphasized are printed in *italic*.
- Keywords that are defined by the UPnP AV Working Committee are printed using the *forum* character style.
- Keywords that are defined by the UPnP Device Architecture specification are printed using the *arch* character style [DEVICE].
- A double colon delimiter, "::", signifies a hierarchical parent-child (parent::child) relationship between the two objects separated by the double colon. This delimiter is used in multiple contexts, for example: Service::Action(), Action()::Argument, parentProperty::childProperty.

1.6 References

This clause lists the normative references used in the UPnP AV specifications and includes the tag inside square brackets that is used for each such reference:
