CONTENTS

FOREWORD.....	5
INTRODUCTION.....	6
1 Scope.....	7
2 Normative references	7
3 Terms and definitions	7
4 Abbreviated terms	8
5 Overview of UWASN application profiles	8
5.1 Introduction to application profiles.....	8
5.2 Benefits of application profiles	8
6 Design process of UWASN application profiles	8
6.1 General.....	8
6.2 Criteria for the design process of UWASN application profiles	9
6.3 Design process steps for UWASN application profiles	9
7 Requirements for the design process of UWASN application profiles	9
7.1 General.....	9
7.2 User requirements of UWASN application profiles.....	10
7.3 General requirements of UWASN application profiles.....	10
7.4 Functional requirements of UWASN application profiles.....	11
7.5 Constrained requirements of UWASN application profiles	12
7.5.1 General	12
7.5.2 Connectivity.....	13
7.5.3 UWA-GW.....	13
7.5.4 UWA-DTN-GW.....	13
7.5.5 Housing case.....	13
7.5.6 Fouling cleaner.....	13
7.5.7 Node deployment.....	13
7.5.8 Battery.....	14
8 Modelling techniques for designing UWASN application profiles	14
8.1 General.....	14
8.2 Use case model	14
8.2.1 General	14
8.2.2 Elements of use case diagram	14
8.2.3 Relationships.....	15
8.3 Sequence diagram model.....	16
8.3.1 General	16
8.3.2 Elements of sequence diagram.....	16
8.4 Class diagram model	18
8.4.1 General	18
8.4.2 Elements of class diagram.....	18
9 Guidelines for the implementation of UWASN application profiles.....	19
9.1 Layered design approach for developing UWASN application profiles	19
9.2 Specific architecture for implementing UWASN application profiles	20
9.3 Framework for implementing UWASN application profiles	21
9.3.1 User interface.....	21
9.3.2 System calculation unit.....	22
9.3.3 Surface devices.....	22

- 9.3.4 Sensor node 22
- 9.4 Functional operations for implementing UWASN application profiles 23
- 10 Specialized maintenance for UWASN application profiles 24
- Annex A (informative) Application profile example..... 26
 - A.1 Fish farming..... 26
 - A.1.1 General 26
 - A.1.2 Guidelines for designing UWASN fish farming application..... 26
 - A.1.3 Requirements for the design process of UWASN fish farming application 27
 - A.1.4 Modelling techniques for designing UWASN fish farming application 30
 - A.1.5 Guidelines for the implementation process of UWASN fish farming application..... 32
- Bibliography..... 38

- Figure 1 – Actor representation examples 14
- Figure 2 – Use case representation examples..... 15
- Figure 3 – System boundary representation example 15
- Figure 4 – Use case model for UWASN application profiles 16
- Figure 5 – Object symbol in a sequence diagram 16
- Figure 6 – Execution box symbol in a sequence diagram 17
- Figure 7 – Lifeline representation in a sequence diagram 17
- Figure 8 – Sequence diagram modelling for UWASN application profiles 17
- Figure 9 – Representation of different sections in class diagram 18
- Figure 10 – Class diagram modelling for UWASN application profiles 19
- Figure 11 – Layer design approach 20
- Figure 12 – UWASN specific architectural model 21
- Figure 13 – Framework of UWASN application profiles 23

- Table 2 – User requirements of UWASN application profiles 10
- Table 3 – General requirements for UWASN application profiles 10
- Table 4 – Functional requirements for UWASN application profiles 11
- Table 5 – Constrained requirements for UWASN application profiles 12
- Table 6 – Relationship and symbols of use case diagram 15
- Table 7 – Components for implementing UWASN application profiles 23
- Table 8 – Operation process of UWASN application profiles 24
- Table 9 – Key factors for monitoring UWASN application profiles 25
- Table 10 – Components used for the maintenance of UWASN application profiles 25

Table A.1 – Steps for designing UWASN fish farming application.....	27
Table A.2 – User requirements for the design process of UWASN fish farming application	27
Table A.3 – General requirements for the design process of UWASN fish farming application	28
Table A.4 – Functional requirements for the design process of UWASN fish farming application	29
Table A.5 – Constrained requirements for the design process of UWASN fish farming application	30
Table A.6 – Operation design process of UWASN fish farming application	36
Table A.7 – Key components to monitor in fish farming application	37
Table A.8 – Components used for the maintenance of UWASN fish farming application	37

INTERNET OF THINGS (IoT) – UNDERWATER ACOUSTIC SENSOR NETWORK (UWASN) – APPLICATION PROFILES

FOREWORD

- 1) ISO (the International Organization for Standardization) and IEC (the International Electrotechnical Commission) form the specialized system for worldwide standardization. National bodies that are members of ISO or IEC participate in the development of International Standards through technical committees established by the respective organization to deal with particular fields of technical activity. ISO and IEC technical committees collaborate in fields of mutual interest. Other international organizations, governmental and non-governmental, in liaison with ISO and IEC, also take part in the work. In the field of information technology, ISO and IEC have established a joint technical committee, ISO/IEC JTC 1.
- 2) The formal decisions or agreements of IEC and ISO on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees and ISO member bodies.
- 3) IEC, ISO and ISO/IEC publications have the form of recommendations for international use and are accepted by IEC National Committees and ISO member bodies in that sense. While all reasonable efforts are made to ensure that the technical content of IEC, ISO and ISO/IEC publications is accurate, IEC or ISO cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees and ISO member bodies undertake to apply IEC, ISO and ISO/IEC publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any ISO, IEC or ISO/IEC publication and the corresponding national or regional publication should be clearly indicated in the latter.
- 5) ISO and IEC do not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. ISO or IEC are not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or ISO or its directors, employees, servants or agents including individual experts and members of their technical committees and IEC National Committees or ISO member bodies for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication of, use of, or reliance upon, this ISO/IEC publication or any other IEC, ISO or ISO/IEC publications.
- 8) Attention is drawn to the normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this ISO/IEC publication may be the subject of patent rights. ISO and IEC shall not be held responsible for identifying any or all such patent rights.

International Standard ISO/IEC 30143 was prepared by subcommittee 41: Internet of Things and related technologies, of ISO/IEC joint technical committee 1: Information technology.

The text of this International Standard is based on the following documents:

FDIS	Report on voting
JTC1-SC41/150/FDIS	JTC1-SC41/161/RVD

Full information on the voting for the approval of this International Standard can be found in the report on voting indicated in the above table.

This publication has been drafted in accordance with the ISO/IEC Directives, Part 2.

IMPORTANT – The 'colour inside' logo on the cover page of this publication indicates that it contains colours which are considered to be useful for the correct understanding of its contents. Users should therefore print this document using a colour printer.

INTRODUCTION

Water covers approximately 70 % of the surface of the Earth. Modern technologies introduce new methods to monitor the body of water such as pollution monitoring and detection. Underwater data gathering techniques require exploring the water environment, which can be most effectively performed by underwater acoustic sensor networks (UWASNs). Applications developed for the UWASNs can record underwater climate, detect and control water pollution, monitor marine biology, discover natural resources, detect pipeline leakages, monitor and find underwater intruders, perform strategic surveillance, and so on.

In order to build and apply the UWASN technology, the most suitable methods for managing the network have been developed based on the already proposed ISO/IEC 30140 series. This document describes the application profiles outline and requirements appropriate to the UWASN under the constraints of underwater physical environment.

The ISO/IEC 30140 series provides general requirements, reference architecture (RA) including the entity models and high-level interface guidelines supporting interoperability among UWASNs in order to provide the essential UWASN construction information to help and guide architects, developers and implementers of UWASNs.

This document provides the guidelines for designing and developing the UWASN application. It also provides other information such as the components required for developing UWASN application, modelling techniques for UWASN application and UWASN application profiles example.

Various technical standards derived from the R&D results of the technical areas under the UWASN and underwater communication fields not covered by the ISO/IEC 30140 series are continuously proposed and developed.

INTERNET OF THINGS (IoT) – UNDERWATER ACOUSTIC SENSOR NETWORK (UWASN) – APPLICATION PROFILES

1 Scope

This document provides the guidelines for designing and developing new applications in the underwater environment such as fish farming, environment monitoring, harbour security, etc. This document also:

- provides the components required for developing the application;
- provides instructions for modelling the application with examples;
- helps the user to understand the communication between the elements in the application for modelling the communication between elements;
- guides the user with the design process of underwater applications.

2 Normative references
