Foreword.....	xiv
Introduction.....	xv
<b>1 Scope.....</b>	<b>1</b>
<b>2 Normative references.....</b>	<b>2</b>
<b>3 Terms and definitions.....</b>	<b>3</b>
3.1 General terms and definitions.....	3
3.2 GQL-environment terms and definitions.....	4
3.3 GQL-catalog terms and definitions.....	6
3.4 Graph terms and definitions.....	7
3.5 Procedure and command terms and definitions.....	9
3.6 General syntax terms and definitions.....	12
3.7 Graph pattern terms and definitions.....	14
3.8 Value terms and definitions.....	15
3.9 Type terms and definitions.....	17
3.10 Temporal terms and definitions.....	19
<b>4 Concepts.....</b>	<b>21</b>
4.1 Use of terms.....	21
4.2 GQL-environments and their components.....	21
4.2.1 General description of GQL-environments.....	21
4.2.2 GQL-agents.....	22
4.2.3 GQL-implementations.....	22
4.2.3.1 Introduction to GQL-implementations.....	22
4.2.3.2 GQL-clients.....	23
4.2.3.3 GQL-servers.....	23
4.2.4 Basic security model.....	24
4.2.4.1 Principals.....	24
4.2.4.2 Authorization identifiers and privileges.....	24
4.2.5 GQL-catalog.....	24
4.2.5.1 General description of the GQL-catalog.....	24
4.2.5.2 GQL-directories.....	25
4.2.5.3 GQL-schemas.....	26
4.2.6 GQL-data.....	27
4.3 GQL-objects.....	27
4.3.1 General introduction to GQL-objects.....	27
4.3.2 References to GQL-schemas and GQL-objects.....	27
4.3.3 Primary objects and secondary objects.....	28
4.3.4 Properties and supported property value types.....	28
4.3.5 Graphs.....	29

4.3.5.1	Introduction to graphs. . . . .	29
4.3.5.2	Graph descriptors. . . . .	30
4.3.6	Binding tables. . . . .	30
4.4	Values. . . . .	32
4.4.1	General information about values. . . . .	32
4.4.2	Comparable values. . . . .	32
4.4.3	Properties of distinct values. . . . .	32
4.4.4	Reference values. . . . .	33
4.4.5	Material values and the null value. . . . .	33
4.5	GQL-sessions. . . . .	33
4.5.1	General description of GQL-sessions. . . . .	33
4.5.2	Session contexts. . . . .	34
4.5.2.1	Introduction to session contexts. . . . .	34
4.5.2.2	Session context creation. . . . .	35
4.5.2.3	Session context modification. . . . .	35
4.6	GQL-transactions. . . . .	35
4.6.1	General description of GQL-transactions. . . . .	35
4.6.2	Transaction demarcation. . . . .	36
4.6.3	Transaction isolation. . . . .	37
4.6.4	Encompassing transaction belonging to an external agent. . . . .	37
4.7	GQL-requests and GQL-programs. . . . .	38
4.7.1	General description of GQL-requests and GQL-programs. . . . .	38
4.7.2	GQL-request contexts. . . . .	38
4.7.2.1	Introduction to GQL-request contexts. . . . .	38
4.7.2.2	GQL-request context creation. . . . .	38
4.7.2.3	GQL-request context modification. . . . .	39
4.7.3	Execution of GQL-requests. . . . .	39
4.7.4	Working schema references. . . . .	40
4.7.5	Working graph site. . . . .	41
4.7.6	Execution stack. . . . .	41
4.7.7	Operations. . . . .	41
4.8	Execution contexts. . . . .	42
4.8.1	General description of execution contexts. . . . .	42
4.8.2	Execution context creation and initialization. . . . .	44
4.8.3	Execution context modification. . . . .	45
4.8.4	Execution outcomes. . . . .	45
4.9	Diagnostic information. . . . .	46
4.9.1	Introduction to diagnostic information. . . . .	46
4.9.2	GQL-status objects. . . . .	46
4.9.3	Conditions. . . . .	47
4.10	Procedures and commands. . . . .	49
4.10.1	General description of procedures and commands. . . . .	49
4.10.2	Procedures. . . . .	49
4.10.2.1	General description of procedures. . . . .	49
4.10.2.2	Named procedure descriptors. . . . .	50
4.10.2.3	Procedure execution. . . . .	50
4.10.2.4	Procedures classified by kind of side effects. . . . .	50

4.10.3	Commands. . . . .	51
4.10.4	GQL-procedures. . . . .	51
4.10.4.1	Introduction to GQL-procedures. . . . .	51
4.10.4.2	Binding variables and general parameters. . . . .	51
4.10.4.3	Statements. . . . .	52
4.10.4.4	Statements classified by use of working graph sites. . . . .	52
4.10.4.5	Statements classified by function. . . . .	52
4.11	Graph pattern matching. . . . .	53
4.11.1	Summary of graph pattern matching. . . . .	53
4.11.2	Paths. . . . .	53
4.11.3	Path patterns. . . . .	54
4.11.4	Graph pattern variables. . . . .	55
4.11.5	References to graph pattern variables. . . . .	56
4.11.6	Path pattern matching. . . . .	57
4.11.7	Path modes. . . . .	58
4.11.8	Selective path search prefixes. . . . .	59
4.11.9	Match modes. . . . .	59
4.12	Data types. . . . .	59
4.12.1	General introduction to data types and base types. . . . .	59
4.12.2	Major classes of data types. . . . .	60
4.12.3	Data type descriptors. . . . .	62
4.12.4	Naming of data types and base types. . . . .	62
4.12.5	Material, nullable, and immaterial data types. . . . .	63
4.12.6	Most specific static value type and static base type. . . . .	63
4.12.7	Open and closed data types. . . . .	63
4.12.8	Additional terminology related to data types. . . . .	64
4.13	GQL-object types. . . . .	64
4.13.1	Introduction to GQL-object types and related base types. . . . .	64
4.13.2	Graph types and graph element types. . . . .	65
4.13.2.1	Introduction to graph types and graph element types. . . . .	65
4.13.2.2	Graph type descriptors. . . . .	65
4.13.2.3	Node types. . . . .	66
4.13.2.4	Edge types. . . . .	67
4.13.2.5	Property types. . . . .	68
4.13.2.6	Key label sets. . . . .	69
4.13.2.7	Structural consistency of element types. . . . .	69
4.13.3	Binding table types. . . . .	70
4.14	Dynamic union types. . . . .	71
4.14.1	Introduction to dynamic union types and the dynamic base type. . . . .	71
4.14.2	Dynamic union data type descriptors. . . . .	71
4.14.3	Characteristics of dynamic union types. . . . .	71
4.14.4	Dynamic generation of type tests and casts. . . . .	72
4.14.4.1	Introduction to dynamic generation of type tests and casts for <value expression>s. . . . .	72
4.14.4.2	Dynamic generation of type tests and strict casts for a <value expression> without operands. . . . .	72
4.14.4.3	Dynamic generation of type tests and strict casts for a <value expression> with operands. . . . .	73
4.14.4.4	Dynamic generation of additional type tests and lax casts for a <value expression>. . . . .	75
4.15	Constructed value types. . . . .	75

4.15.1	Introduction to constructed value types and related base types. . . . .	75
4.15.2	Path value types. . . . .	76
4.15.3	List value types. . . . .	76
4.15.4	Record types. . . . .	77
4.16	Predefined value types. . . . .	79
4.16.1	Introduction to predefined value types and related base types. . . . .	79
4.16.2	Boolean types. . . . .	81
4.16.3	Character string types. . . . .	82
4.16.3.1	Introduction to character strings. . . . .	82
4.16.3.2	Collations. . . . .	83
4.16.4	Byte string types. . . . .	84
4.16.5	Numeric types. . . . .	85
4.16.5.1	Introduction to numbers. . . . .	85
4.16.5.2	Characteristics of numbers. . . . .	85
4.16.5.3	Binary exact numeric types. . . . .	87
4.16.5.4	Decimal exact numeric types. . . . .	88
4.16.5.5	Approximate numeric types. . . . .	89
4.16.6	Temporal types. . . . .	90
4.16.6.1	Introduction to temporal data. . . . .	90
4.16.6.2	Temporal instant types. . . . .	90
4.16.6.3	Temporal duration types. . . . .	91
4.16.6.4	Operators involving values of temporal types. . . . .	92
4.16.7	Reference value types. . . . .	93
4.16.8	Immaterial value types: null type and empty type. . . . .	94
4.17	Sites. . . . .	94
4.17.1	General description of sites. . . . .	94
4.17.2	Static and dynamic sites. . . . .	95
4.17.3	Assignment and store assignment. . . . .	95
4.17.4	Nullability. . . . .	95
4.17.4.1	Introduction to nullability. . . . .	95
4.17.4.2	Nullability requirements. . . . .	96
4.17.4.3	Nullability inference. . . . .	96
<b>5</b>	<b>Notation and conventions. . . . .</b>	<b>97</b>
5.1	Notation taken from <a href="#">The Unicode® Standard</a> . . . . .	97
5.2	Notation. . . . .	97
5.3	Conventions. . . . .	98
5.3.1	Specification of syntactic elements. . . . .	98
5.3.2	Use of terms. . . . .	99
5.3.2.1	Syntactic containment. . . . .	99
5.3.2.2	Keywords and <keyword>s. . . . .	100
5.3.2.3	Terms denoting rule requirements. . . . .	100
5.3.2.4	Rule evaluation order. . . . .	100
5.3.2.5	Conditional rules. . . . .	101
5.3.2.6	Syntactic substitution. . . . .	102
5.3.3	Descriptors. . . . .	102
5.3.4	Subclauses used as subroutines. . . . .	103
5.3.5	Document typography. . . . .	103

5.3.6	Index typography.....	103
5.3.7	Feature ID and Feature Name.....	104
<b>6</b>	<b>&lt;GQL-program&gt;.....</b>	<b>105</b>
<b>7</b>	<b>Session management.....</b>	<b>107</b>

## Foreword

ISO (the International Organization for Standardization) and IEC (the International Electrotechnical Commission) form the specialized system for worldwide standardization. National bodies that are members of ISO or IEC participate in the development of International Standards through technical committees established by the respective organization to deal with particular fields of technical activity. ISO and IEC technical committees collaborate in fields of mutual interest. Other international organizations, governmental and non-governmental, in liaison with ISO and IEC, also take part in the work.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of document should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see <https://www.iso.org/directives> or [https://www.iec.ch/members\\_experts/refdocs](https://www.iec.ch/members_experts/refdocs)).

ISO and IEC draw attention to the possibility that the implementation of this document may involve the use of (a) patent(s). ISO and IEC take no position concerning the evidence, validity or applicability of any claimed patent rights in respect thereof. As of the date of publication of this document, ISO and IEC had not received notice of (a) patent(s) which may be required to implement this document. However, implementers are cautioned that this may not represent the latest information, which may be obtained from the patent database available at <https://www.iso.org/patents> and <https://patents.iec.ch>. ISO and IEC shall not be held responsible for identifying any or all such patent rights.

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT) see <https://www.iso.org/iso/foreword.html>. In the IEC, see <https://www.iec.ch/understanding-standards>.

This document was prepared by Joint Technical Committee ISO/IEC JTC 1, *Information technology*, Subcommittee SC 32, *Data management and interchange*.

Any feedback or questions on this document should be directed to the user's national standards body. <https://www.iso.org/members.html> and <https://www.iec.ch/national-committees>.

## Introduction

This document defines GQL, a database language for modeling structured data as a graph, and for storing, querying, and modifying that data in a graph database or other graph store. There are two major graph data models in current use: the Resource Description Framework (RDF) model and the Property Graph model. The RDF model has been standardized by W3C in a number of specifications. GQL addresses the Property Graph model.

Property graphs organize data as entities called nodes (or, alternatively, vertices) and edges (or, alternatively, relationships). Each graph element (a node or an edge) can have associated labels and properties. The flexibility and intuitiveness of the data model and its emphasis on interconnections between graph elements make property graphs suitable for storing complex knowledge and for analytical tasks such as entity resolution, fraud detection, cyber security, and forecasting.

GQL is declarative and transactional, taking inspiration from SQL and from leading independently-developed property graph languages. Property graphs select data primarily through path pattern matching. Defining path pattern searches in a graph is often simpler or more flexible than defining the equivalent joins in SQL. The flexible data model, the availability of path pattern matching, and the efficiency of traversing edges compared to joining tables have led to increasing interest in property graph databases.

Various graph data models have been around for many decades, but it is only since the early 21st century that the demand has driven the rise of commercial graph database and graph analytical systems for property graphs.

GQL provides a standard yet flexible common language for this growing market. GQL supports the same graph pattern matching syntax as SQL Property Graph Queries, ISO/IEC 9075-16, Information technology — Database languages SQL— Part 16: Property Graph Queries (SQL/PGQ). While SQL/PGQ provides the property graph data model and graph pattern matching on top of a relational SQL database, GQL is intended for pure property graphs that provide graph data management independent from SQL.

## **Information technology — Database languages — GQL**

### **1 Scope**

This document defines data structures and basic operations on property graphs. It provides capabilities for creating, accessing, querying, maintaining, and controlling property graphs and the data they comprise.

This document specifies the syntax and semantics of a data management language for specifying and modifying the structure of property graphs and collections thereof. This document provides a vehicle for portability of data definitions and manipulation among GQL-implementations.

Implementations of this document can exist in environments that also support application programming languages, end-user query facilities, and various tools for database design, data administration, and performance optimization.
