## Foreword

ISO (the International Organization for Standardization) and IEC (the International Electrotechnical Commission) form the specialized system for worldwide standardization. National bodies that are members of ISO or IEC participate in the development of International Standards through technical committees established by the respective organization to deal with particular fields of technical activity. ISO and IEC technical committees collaborate in fields of mutual interest. Other international organizations, governmental and non-governmental, in liaison with ISO and IEC, also take part in the work.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of document should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see [www.iso.org/directives](http://www.iso.org/directives) or [www.iec.ch/members\\_experts/refdocs](http://www.iec.ch/members_experts/refdocs)).

ISO and IEC draw attention to the possibility that the implementation of this document may involve the use of (a) patent(s). ISO and IEC take no position concerning the evidence, validity or applicability of any claimed patent rights in respect thereof. As of the date of publication of this document, ISO and IEC had not received notice of (a) patent(s) which may be required to implement this document. However, implementers are cautioned that this may not represent the latest information, which may be obtained from the patent database available at [www.iso.org/patents](http://www.iso.org/patents) and <https://patents.iec.ch>. ISO and IEC shall not be held responsible for identifying any or all such patent rights.

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT) see [www.iso.org/iso/foreword.html](http://www.iso.org/iso/foreword.html). In the IEC, see [www.iec.ch/understanding-standards](http://www.iec.ch/understanding-standards).

This document was prepared by Joint Technical Committee ISO/IEC JTC 1, *Information technology*, Subcommittee SC 27, *Information security, cybersecurity and privacy protection*.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at [www.iso.org/members.html](http://www.iso.org/members.html) and [www.iec.ch/national-committees](http://www.iec.ch/national-committees).

## Introduction

This document specifies requirements and guidelines for organizations to record information about:

- consent obtained from individuals prior to collecting and processing personally identifiable information (PII); and
- the means by which individuals keep track of such content.

ISO/IEC 29184 specifies controls which shape the content and the structure of online privacy notices, and the process of asking for consent to collect and process PII from PII principals. ISO/IEC 29184 is focused on the obligations of the PII controller, or entities processing PII on behalf of the PII controller, to inform PII principals of how their PII is processed. ISO/IEC 29184 does not address the needs of PII principals.

This document builds upon ISO/IEC 29184 by addressing the concept of giving the PII principal a record for their own recordkeeping, which includes information about the PII processing agreement and interaction. We call this record the “consent receipt”.

This document specifies a structure that is used by both principals in consent management: namely a specification for data to be held by the organization to allow record-keeping with good integrity (subject to the defined controls), and an artefact (the “consent receipt”) that is given to the individual whose PII is being processed.

This document does not specify an exchange protocol for consent records or consent receipts, nor structures for such exchanges.

# Privacy technologies — Consent record information structure

## 1 Scope

This document specifies an interoperable, open and extensible information structure for recording PII principals' consent to PII processing. This document provides requirements and recommendations on the use of consent receipts and consent records associated with a PII principal's PII processing consent, aiming to support the:

- provision of a record of the consent to the PII principal;
- exchange of consent information between information systems;
- management of the life cycle of the recorded consent.

## 2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.
