CCITT RECOMMENDATION

**INFORMATION TECHNOLOGY – OPEN SYSTEMS INTERCONNECTION –  
STRUCTURE OF MANAGEMENT INFORMATION:  
MANAGEMENT INFORMATION MODEL**

**TECHNICAL CORRIGENDUM 1**

**Subclause 5.3.3.2**

Replace the scope sentence with the following:

“This operation applies to attributes encapsulated in managed objects whose class definitions permit the get attribute value operation on the attribute.”

**Subclause 5.3.3.3**

Replace the scope sentence with the following:

“This operation applies to attributes encapsulated in managed objects whose class definitions permit the replace attribute value operation on the attribute.”

**Subclause 5.3.3.4**

Replace the scope sentence with the following:

“This operation applies to attributes encapsulated in managed objects whose class definitions permit the replace-with-default value operation on the attribute.”

**Subclause 5.3.3.5**

Replace the scope sentence with the following:

“This operation applies to attributes encapsulated in managed objects whose class definitions permit the add member operation on the attribute.”

**Subclause 5.3.3.6**

Replace the scope sentence with the following:

“This operation applies to attributes encapsulated in managed objects whose class definitions permit the remove member operation on the attribute.”

### **Subclause 6.3.2.1**

In the text after the “local form:” bullet, replace:

“For OSI systems management the context for the local form is the system managed object and the local form name for the system managed object is the empty sequence. For OSI systems management the local form can always be used. However, the local form does not provide globally-unique identification.”

with the following:

“The system managed object represents the system providing the functionality of the agent. For OSI systems management the context for local form is that system managed object. The local form for that system managed object is the empty sequence. For OSI systems management, local form can always be used for managed objects named in the context of that system managed object. For managed objects not named relative to that system managed object, the use of global form is required. The local form does not provide globally unique identification.”
