Total number of pages 2 Pages

Translation of the VDE-Bestimmung according to VDE 0022. The original German version
was included in the VDE Specifications Code of safety standards under the VDE number
indicated above and announced in the "etz Elektrotechnik + Automation" magazine.

This English language version includes the English translation of this document or, for EN/IEC adoptions, the English translation of the German national foreword and German national additions to this document.

The English language version has been prepared to the best of our knowledge and belief. However, VDE DKE cannot give any warranty, express or implied, as to the accuracy, completeness or timeliness of the content of the English language version. The German language version alone is authoritative. The use of the English language version is made in the knowledge that VDE DKE cannot be held liable for damage or loss of any kind. The use of the bilingual edition does not release the user from the responsibility for his own actions and is therefore at his own risk.

The German committee responsible for this corrigendum is DKE/UK 542.1 "Schalter und Steckvorrichtungen für den Hausgebrauch und ähnliche Zwecke" of the DKE German Commission for Electrical, Electronic & Information Technologies of DIN and VDE (www.dke.de).

Up-to-date information on this document can be accessed via the DKE (www.dke.de) and DIN (www.din.de) websites by searching for the document number.

Concerns the German version only

DIN VDE 0620-1 (VDE 0620-1):2021-02

The following corrections shall be made in

3.27

live part

Add the following text to the definition:

"... and metal parts of SELV circuits"

10.5.1

Delete the following text in the last paragraph:

"or parts of SELV circuits".

13.7.2

Delete the following word in the last item of the third indent:

"active".

17.2

Add the following paragraph after the second indent:

"Surfaces which are accessible during intended use can also be metal surfaces which are indirectly accessible, such as enclosures or mated cords. All above-mentioned metal surfaces are put on the potential of the accessible surfaces."
